Re: Registered Construction and, Operation Status
039-19582-00554

Dear Mr. Conway:

The application from Wildcat Division of Forest River, Inc., received on April 14, 2004, has been reviewed. Based on the data submitted and the provisions in 326 IAC 2-5.1, it has been determined that the following recreational vehicle assembly plant, to be located at 57475 County Road 3, Elkhart, Indiana, is classified as registered:

- (a) Seven (7) natural gas space heaters each rated at 0.3 MMBtu/hr (each).
- (b) Two (2) natural gas space heaters each rated at 0.1 MMBtu/hr (each).
- (c) One (1) assembly line which includes surface and assembly coating operations.
- (d) One (1) woodworking shop.

The following conditions shall be applicable:

1. Pursuant to 326 IAC 5-1-2 (Opacity Limitations), except as provided in 326 IAC 5-1-3 (Temporary Alternative Opacity Limitations), opacity shall meet the following:
 - (a) Opacity shall not exceed an average of forty percent (40%) in any one (1) six (6) minute averaging period as determined in 326 IAC 5-1-4.
 - (b) Opacity shall not exceed sixty percent (60%) for more than a cumulative total of fifteen (15) minute (sixty (60) readings as measured according to 40 CFR 60, Appendix A, Method 9 or fifteen (15) one (1) minute nonoverlapping integrated averages for a continuous opacity monitor in a six (6) hour period.
2. Pursuant to 326 IAC 6-3-2 (Process Operations)
The particulate matter (PM) from the woodworking and surface coating operations shall be limited by the following:

Interpolation of the data for the process weight rate up to sixty thousand (60,000) pounds per hour shall be accomplished by use of the equation:

$$E = 4.10 P^{0.67} \quad \text{where } E = \text{rate of emission in pounds per hour and} \\ P = \text{process weight rate in tons per hour}$$

For Wildcat Division of Forest River's woodworking operation, the process rate is 6,000 pounds (includes the weight of the vehicle) such that the PM emission rate is 8.57 pounds per hour.

$$E = 4.10 (3)^{0.67} = 4.10 (2.09) = 8.57$$

Note: The maximum potential PM emission rate is 0.741 pounds per hour. In order to maintain registration status, the total facility potential to emit must be less than 25 tons per year.

This is the second air approval registration issued to this source. The source may operate according to 326 IAC 2-5.5.

An authorized individual shall provide an annual notice to the Office of Air Quality (OAQ) that the source is in operation and in compliance with this registration pursuant to 326 IAC 2-5.1-2(f)(3). The annual notice shall be submitted to:

**Compliance Data Section
Office of Air Quality
100 North Senate Avenue
P.O. Box 6015
Indianapolis, IN 46206-6015**

no later than March 1 of each year, with the annual notice being submitted in the format attached.

An application or notification shall be submitted in accordance with 326 IAC 2 to the Office of Air Quality (OAQ) if the source proposes to construct new emission units, modify existing emission units, or otherwise modify the source, which may increase the potential emissions of any criteria pollutant equal to or greater than 25 tons per, or any individual HAP equal to or greater than 10 tons per year, or any combination of HAPs equal to or greater than 25 tons per year or more, from equipment covered in this registration.

Sincerely,
