RE: Bunge North America (East) , Inc. / 145-21327-00035

FROM: Paul Dubenetzky
Chief, Permits Branch
Office of Air Quality

Notice of Decision: Approval – Effective Immediately

Please be advised that on behalf of the Commissioner of the Department of Environmental Management, I have issued a decision regarding the enclosed matter. Pursuant to IC 13-17-3-4 and 326 IAC 2, this permit modification is effective immediately, unless a petition for stay of effectiveness is filed and granted, and may be revoked or modified in accordance with the provisions of IC 13-15-7-1.

If you wish to challenge this decision, IC 4-21.5-3-7 and IC 13-15-7-3 require that you file a petition for administrative review. This petition may include a request for stay of effectiveness and must be submitted to the Office Environmental Adjudication, 100 North Senate Avenue, Government Center North, Room 1049, Indianapolis, IN 46204, **within eighteen (18) days of the mailing of this notice**. The filing of a petition for administrative review is complete on the earliest of the following dates that apply to the filing:

- (1) the date the document is delivered to the Office of Environmental Adjudication (OEA);
- (2) the date of the postmark on the envelope containing the document, if the document is mailed to OEA by U.S. mail; or
- (3) The date on which the document is deposited with a private carrier, as shown by receipt issued by the carrier, if the document is sent to the OEA by private carrier.

The petition must include facts demonstrating that you are either the applicant, a person aggrieved or adversely affected by the decision or otherwise entitled to review by law. Please identify the permit, decision, or other order for which you seek review by permit number, name of the applicant, location, date of this notice and all of the following:

- (1) the name and address of the person making the request;
- (2) the interest of the person making the request;
- (3) identification of any persons represented by the person making the request;
- (4) the reasons, with particularity, for the request;
- (5) the issues, with particularity, proposed for considerations at any hearing; and
- (6) identification of the terms and conditions which, in the judgment of the person making the request, would be appropriate in the case in question to satisfy the requirements of the law governing documents of the type issued by the Commissioner.

Pursuant to 326 IAC 2-7-18(d), any person may petition the U.S. EPA to object to the issuance of a Title V operating permit or modification within sixty (60) days of the end of the forty-five (45) day EPA review period. Such an objection must be based only on issues that were raised with reasonable specificity during the public comment period, unless the petitioner demonstrates that it was impracticable to raise such issues, or if the grounds for such objection arose after the comment period.

To petition the U.S. EPA to object to the issuance of a Title V operating permit, contact:

U.S. Environmental Protection Agency
401 M Street
Washington, D.C. 20406

If you have technical questions regarding the enclosed documents, please contact the Office of Air Quality, Permits Branch at (317) 233-0178. Callers from within Indiana may call toll-free at 1-800-451-6027, ext. 3-0178.

Re: 145-21327
First Significant Permit Modification to:
Part 70 permit No.: T145-9004-00035

Dear Mr. Mcnamara:

Bunge North America (East), Inc. was issued Part 70 operating permit T145-9004-00035 on June 29, 2004, for a soybean processing facility. An application to modify the source was received on May 16, 2005. The modification consists of a replacement of some existing pellet mill equipment with a new pellet mill, pellet cooler and high efficiency cyclone with fan in order to increase the current process rate under Condition D.6 of their Title V operating permit:

- (a) One (1) pelletizing mill, labeled as part of EU# 26, with a maximum rate of 36,000 lbs raw material per hour (18 tph).
- (b) One (1) pellet cooler, labeled as part of EU# 26, with a maximum rate of 36,000 lbs raw material per hour (18 tph), using a high efficiency cyclone control device with a rating of 0.01 grains/dscf and 7,500 acfm at stack Pt#26.

Pursuant to the provisions of 326 IAC 2-7-12 a significant permit modification to this permit is hereby approved as described in the attached Technical Support Document.

All other conditions of the permit shall remain unchanged and in effect. Please attach a copy of this modification and the following revised permit pages to the front of the original permit.

This decision is subject to the Indiana Administrative Orders and Procedures Act - IC 4-21.5-3-5. If you have any questions on this matter call (800) 451-6027 and ask for Lawrence Stapf extension 2-8427, or directly dial (317) 232-8427.

Sincerely,

PART 70 OPERATING PERMIT OFFICE OF AIR QUALITY

**Bunge North America (East), Inc.
700 N. Rangeline Road
Morristown, Indiana 46161-0860**

(herein known as the Permittee) is hereby authorized to operate subject to the conditions contained herein, the source described in Section A (Source Summary) of this permit.

The Permittee must comply with all conditions of this permit. Noncompliance with any provisions of this permit is grounds for enforcement action; permit termination, revocation and reissuance, or modification; or denial of a permit renewal application. Noncompliance with any provision of this permit, except any provision specifically designated as not federally enforceable, constitutes a violation of the Clean Air Act. It shall not be a defense for the Permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this permit. An emergency does constitute an affirmative defense in an enforcement action provided the Permittee complies with the applicable requirements set forth in Section B, Emergency Provisions.

This permit is issued in accordance with 326 IAC 2 and 40 CFR Part 70 Appendix A and contains the conditions and provisions specified in 326 IAC 2-7 as required by 42 U.S.C. 7401, et. seq. (Clean Air Act as amended by the 1990 Clean Air Act Amendments), 40 CFR Part 70.6, IC 13-15 and IC 13-17.

Operation Permit No.: T145-9004-00035

SECTION A

SOURCE SUMMARY

This permit is based on information requested by the Indiana Department of Environmental Management (IDEM), Office of Air Quality (OAQ). The information describing the source contained in conditions A.1 through A.3 is descriptive information and does not constitute enforceable conditions. However, the Permittee should be aware that a physical change or a change in the method of operation that may render this descriptive information obsolete or inaccurate may trigger requirements for the Permittee to obtain additional permits or seek modification of this permit pursuant to 326 IAC 2, or change other applicable requirements presented in the permit application.

A.1 General Information [326 IAC 2-7-4(c)] [326 IAC 2-7-5(15)] [326 IAC 2-7-1(22)]

The Permittee owns and operates a stationary soybean processing plant.

Responsible Official:	Plant Manager
Source Address:	700 N. Rangeline Road, Morrystown, Indiana 46161-0860
Mailing Address:	P.O. Box 860, Morrystown, Indiana 46161-0860
General Source Phone Number:	(765)763-7500
SIC Code:	2075
County Location:	Shelby
Source Location Status:	Nonattainment for ozone under the 8-hour standard; Attainment for all other criteria pollutants
Source Status:	Part 70 Permit Program Minor Source, under PSD Rules and Nonattainment NSR; Major Source, Section 112 of Clean Air Act

A.2 Emission Units and Pollution Control Equipment Summary [326 IAC 2-7-4(c)(3)] [326 IAC 2-7-5(15)]

This stationary source consists of the following emission units and pollution control devices:

NOTE: All capacities are considered confidential by the source and are included in a confidential OAQ file.

A-PLANT (EXISTING)

- (a) Truck receiving operations, constructed in 1996, consisting of the following units, using the truck receiving/storage baghouse for control, and exhausting at stack Pt #1:
- (1) Two (2) truck dumps (#1 & #2);
 - (2) Two (2) truck receiving conveyors (#1 & #2);
 - (3) Two (2) receiving legs (#1 & #2), using the truck receiving/storage baghouse and oil applications;
 - (4) One (1) screen;
 - (5) Two (2) receiving legs (#1 & #2) extending from the screen;
 - (6) Two (2) screening conveyors;
 - (7) One (1) screening leg;
 - (8) One (1) screening leg;
 - (9) Two (2) conveyors (#1 & #2) extending to storage silos and to bulk storage;

- (10) Two (2) conveyors extending to bulk storage feeding and continuing to the bulk storage silos;
 - (11) Ten (10) silos;
 - (12) One (1) screening bin;
 - (13) Two (2) bulk storage bins;
 - (14) One (1) screening conveyor extending from the screening silo;
 - (15) One (1) screening storage conveyor;
 - (16) Two (2) totally enclosed screenings transfer conveyors arranged in a series, transferring screenings from the screenings storage conveyors to the screening bucket elevator;
 - (17) One (1) screening bucket elevator, transferring screenings from the screenings transfer conveyors to the screenings surge bin;
 - (18) Two (2) bulk storage return conveyors (#1 & #2) arranged in a series;
 - (19) Two (2) conveyors from storage (#1 & #2);
 - (20) One (1) conveyor extending to the surge bin leg; and
 - (21) One (1) truck receiving/storage baghouse conveyor which transfers dust from the baghouse back to the truck receiving/storage baghouse;
- (b) Rail receiving operations, constructed in 1996, consisting of the following units, using the rail receiving baghouse for control, and exhausting at stack Pt #2:
- (1) One (1) rail car dump; and
 - (2) One (1) rail car receiving conveyor;
- (c) Grain screening operations, constructed in 1996, consisting of the following units, using the screenings baghouse, and exhausting at stack Pt #5:
- (1) One (1) screening surge bin;
 - (2) One (1) conveyor extending to the de-stoner;
 - (3) One (1) de-stoner, using a cyclone and the screening baghouse for control;
 - (4) One (1) screening grinder;
 - (5) Four (4) totally enclosed conveyors in a series, extending to the hull refining screener;
 - (6) One (1) cyclone exhausting to the screening baghouse;
 - (7) One (1) surge bin elevator;
 - (8) One (1) whole bean surge bin;

- (9) One (1) dryer feed elevator;
 - (10) One (1) totally enclosed dryer feed conveyor, transferring beans to the dryer feed elevator;
 - (11) Two (2) whole bean aspirators, in parallel;
 - (12) One (1) dryer discharge conveyor;
 - (13) One (1) day bin elevator;
 - (14) Two (2) day bins;
 - (15) Two (2) totally enclosed conveyors, arranged in a series;
 - (16) Two (2) conveyors extending from the dryer to the dryer discharge conveyor;
 - (17) One (1) milling elevator;
 - (18) One (1) product meal conveyor, identified as #1;
 - (19) One (1) meal surge conveyor, identified as #2;
 - (20) Three (3) meal storage silos;
 - (21) One (1) load out leg conveyor;
 - (22) One (1) load out meal elevator; and
 - (23) One (1) meal transfer conveyor;
- (d) One (1) column dryer, constructed in 1996, exhausting at stack Pt #3;
- (e) Milling operations, constructed in 1996, consisting of the following units, using the RF filter baghouse for control, and exhausting at stack Pt #4:
- (1) One (1) soy bean scale with upper and lower scale garners;
 - (2) Six (6) cracking rolls with primary dehulling aspirators, using the primary aspiration cyclone and RF filter baghouse for control;
 - (3) Three (3) conveyors extending from the primary dehulling aspirators, with a maximum combined capacity of 100 tons per hour;
 - (4) Three (3) surge bins;
 - (5) Three (3) cracked bean conditioners;
 - (6) Three (3) conveyors extending from the cracked bean conditioners;
 - (7) Three (3) impactors with secondary dehulling aspirators, using the secondary aspiration cyclones and RF filter baghouse for control;
 - (8) One (1) primary aspiration cyclone;
 - (9) One (1) secondary aspiration cyclone;

- (10) Two (2) hull refining screeners, exhausting to the hull refining cyclone;
 - (11) Four (4) hull refining aspirators, exhausting to the hull refining cyclone;
 - (12) One (1) hull refining cyclone;
 - (13) Two (2) millfeed grinders;
 - (14) Three (3) surge bins;
 - (15) One (1) meal screen;
 - (16) Two (2) hammer mills;
 - (17) Two (2) totally enclosed sized meal conveyors, in a series; and
 - (18) One (1) millfeed weight belt;
- (f) Flaking mill operations, constructed in 1996, consisting of the following units, using the flaker aspiration baghouse, and exhausting at stack Pt #6:
- (1) Nine (9) flakers; and
 - (2) One (1) flake collecting conveyor;
- (g) One (1) flow coating material bin, using the flow coat receiving baghouse for control, and exhausting at stack Pt #11;
- (h) Truck meal loadout operations, constructed in 1996, consisting of the following units, using the truck meal loadout baghouse, and exhausting at stack Pt #12:
- (1) One (1) mixer, extending from the hull grinders;
 - (2) One (1) millfeed elevator leg;
 - (3) One (1) totally enclosed millfeed conveyor;
 - (4) Three (3) millfeed bins;
 - (5) One (1) millfeed weigh belt;
 - (6) One (1) meal conveyor extending from the coolers;
 - (7) One (1) DTDC unground meal conveyor extending to another set of conveyors;
 - (8) One (1) unground meal conveyor;
 - (9) One (1) feeder;
 - (10) One (1) flow coating material screw;
 - (11) One (1) mixing screw conveyor;
 - (12) One (1) production meal elevator;
 - (13) One (1) product meal conveyor #2;

- (14) Six (6) meal storage bins;
 - (15) One (1) truck load out conveyor;
 - (16) One (1) truck loader; and
 - (17) One (1) truck scale;
- (i) Rail meal loadout operations, constructed in 1996, consisting of the following units, using the rail meal loadout baghouse, and exhausting at stack Pt #13:
- (1) a rail load out conveyor;
 - (2) One (1) rail scale; and
 - (3) One (1) rail loader;
- (j) Oil extraction and processing operations, constructed in 1996, consisting of the following units:
- (1) One (1) soybean oil extractor, using a mineral oil absorber for control, and exhausting at stack Pt #9;
 - (2) One (1) set of evaporators, using a mineral oil absorber for control, and exhausting at stack Pt #9;
 - (3) One (1) desolventizer/toaster, using a mineral oil absorber for control, and exhausting at stack Pt #9;
 - (4) One (1) set of condensers and water separators to separate hexane and water, using a mineral oil absorber for control, and exhausting at stack Pt #9;
 - (5) Two (2) mineral oil absorbers, using a mineral oil absorber for control, and exhausting at stack Pt #9;
 - (6) One (1) spent flake conveyor extending to the meal dryer;
 - (7) One (1) totally enclosed seal screw conveyor, installed in a series with the slurry loader conveyor;
 - (8) One (1) flake conveyor extending to the slurry loader conveyor;
 - (9) One (1) slurry loader conveyor;
 - (10) One (1) hexane storage tank, identified as #1 (storage);
 - (11) One (1) hexane storage tank, identified as #2 (process tank);
 - (12) One (1) hexane storage tank, identified as #3 (work/separation);
- (k) Two (2) DTDC meal dryers (#1 & #2), both constructed in 1996, using a cyclone for control and exhausting at stack Pt #7;
- (l) One (1) cyclone for the control of the meal dryers, constructed in 1996, and exhausting at stack Pt #7;

- (m) Two (2) DTDC meal coolers (#1 & #2), both constructed in 1996, using a cyclone for control, and exhausting at stack Pt #8;
- (n) One (1) cyclone for the control of the meal coolers, constructed in 1996, and exhausting at stack Pt #8;
- (o) One (1) natural gas-fired/#2 fuel oil-fired combustion unit, identified as Murray boiler, constructed in 1996;
- (p) One (1) vegetable oil refinery process, constructed in 2002, consisting of crude vegetable oil receiving, storage, filtration, and degumming equipment; lecithin drying and processing equipment; oil refining, deodorizing, and filtration equipment; bulk oil handling, blending, storage, and loadout facilities; and including the following equipment:
 - (1) One (1) storage silo, identified as R-101, equipped with a baghouse for particulate matter control, exhausting to Stack R-101;
 - (2) One (1) surge tank, identified as R-102, equipped with a baghouse for particulate matter control, exhausting to Stack R-102;
 - (3) One (1) storage silo, identified as R-103, equipped with a baghouse for particulate matter control, exhausting to Stack R-103;
 - (4) One (1) surge tank, identified as R-104, equipped with a baghouse for particulate matter control, exhausting to Stack R-104;
 - (5) One (1) storage silo, identified as R-105, equipped with a baghouse for particulate matter control, exhausting to Stack R-105;
 - (6) One (1) surge tank, identified as R-106, equipped with a baghouse for particulate matter control, exhausting to Stack R-106; and
 - (7) One (1) natural gas-fired boiler, identified as R-107, exhausting to Stack R-107.
- (q) One (1) pelletizing/extruding mill, labeled as part of EU# 26, with a maximum rate of 36,000 lbs raw material per hour (18 tph), using a cyclone control device with a rating of 0.01 grains/dscf and 7,500 acfm at stack Pt#26;
- (r) One (1) pellet cooler, labeled as part of EU# 26, with a maximum rate of 36,000 lbs raw material per hour (18 tph), using a high efficiency cyclone control device with a rating of 0.01 grains/dscf and 7,500 acfm at stack Pt#26;
- (s) One (1) totally enclosed drag conveyor, with a maximum rate of 15 tons per hour;
- (t) One (1) totally enclosed "L" path conveyor, with a maximum rate of 15 tons per hour; and
- (u) One (1) bucket leg, with a maximum rate of 15 tons per hour.
- (v) The following emission units used in truck receiving operations, using the truck receiving/storage baghouse (identified as #17) for control, and exhausting through stack Pt #1:
 - (1) Two (2) screens, identified as #4, with a total maximum throughput rate of 1,210 tons per hour.

- (2) One (1) transfer system, identified as #9a, with a maximum throughput rate of 1,150 tons per hour, transferring soybeans from the bulk storage elevator to the bulk storage silos.
 - (3) One (1) enclosed whole bean conveyor, identified as #16a, with a maximum throughput rate of 340 tons per hour, conveying beans from the surge bin leg to the whole bean surge silo (#28a).
 - (4) One (1) whole bean surge silo, identified as #28a, with a maximum storage capacity of 40,000 bushels.
 - (5) One (1) enclosed conveyor, identified as #17a, with a maximum throughput rate of 40 tons per hour, conveying the dust from the truck receiving/storage baghouse (#17) to the screening leg.
 - (6) One (1) new bean screening screw conveyor, identified as #1a, with a maximum throughput rate of 36 tons per hour, transferring soybeans from the screening system (#4) to the screening leg baghouse.
- (w) The following emission units used in meal processing operations, using the meal grinding baghouse (identified as #39b) for control, and exhausting through stack Pt #24:
- (1) One (1) enclosed meal screener feeder conveyor, identified as #74a, with a maximum throughput rate of 80 tons per hour, conveying the meal produced to the meal screen system.
 - (2) One (1) enclosed meal grinder feed conveyor, identified as #75a, with a maximum throughput rate of 80 tons per hour, conveying the meal from the meal screen system to meal feeders.
 - (3) One (1) meal grinding system, identified as #76, consisting of three (3) hammer mills, with a total maximum process rate of 80 tons per hour. This process rate is limited by the maximum throughput rate of the conveyors.
 - (4) Two (2) enclosed sized meal conveyors, identified as #78a, with a total maximum throughput rate of 80 tons per hour, conveying the ground meal from the meal grinding system (#76) to the meal handling system.

A.3 Specifically Regulated Insignificant Activities [326 IAC 2-7-1(21)] [326 IAC 2-7-4(c)] [326 IAC 2-7-5(15)]

This stationary source also includes the following insignificant activities which are specifically regulated, as defined in 326 IAC 2-7-1(21):

- (a) Blowdown for any of the following: sight glass; boiler; compressors; pumps; and cooling tower [326 IAC 6-3-2];
- (b) Replacement or repair of electrostatic precipitators, bags in baghouses and filters in other air filtration equipment [326 IAC 6-3-2];
- (c) Emission units with PM and PM10 emissions less than five (5) tons per year, SO₂, NO_x, and VOC emissions less than ten (10) tons per year, CO emissions less than twenty-five (25) tons per year, lead emissions less than two-tenths (0.2) tons per year, single HAP

emissions less than one (1) ton per year, and combination of HAPs emissions less than two and a half (2.5) tons per year:

- (1) One (1) #2 fuel oil storage tank, identified as #4, with a capacity of 3,958 cubic feet [326 IAC 12];
- (2) One (1) soybean oil storage tank, identified as #6, with a capacity of 38,000 cubic feet [326 IAC 12];
- (3) One (1) soybean oil storage tank, identified as #7, with a capacity of 38,000 cubic feet [326 IAC 12];
- (4) One (1) #2 fuel oil storage tank, identified as #10, with a capacity of 3,958 cubic feet [326 IAC 12]; and

- (d) Paved and unpaved roads and parking lots with public access [326 IAC 6-5].

A-PLANT (NEW EQUIPMENT)

- (x) One (1) totally enclosed screening conveyor, identified as #1a.
- (y) One (1) screening leg, identified as #7a, controlled by truck receiving /storage baghouse, and exhausting at stack Pt #1.
- (z) One (1) conveyor to bulk storage feeding to bulk storage silos, identified as #9a, controlled by truck receiving /storage baghouse, and exhausting at stack Pt #1.
- (aa) One (1) screening bin, identified as #10a.
- (ab) One (1) screening from storage conveyor after screening conveyor, identified as #13a.
- (ac) One (1) conveyor to surge bin leg, identified as #16a.
- (ad) One (1) truck receiving /storage baghouse conveyor, identified as #17a, transferring the dust from the baghouse to the screenings leg directly aspirated to the truck receiving /storage baghouse.
- (ae) Three (3) totally enclosed conveyors to hull refining screener, identified as #25a.
- (af) One (1) totally enclosed dryer feed conveyor to the dryer feed elevator, identified as #29a.
- (ag) One (1) hull refining screener, identified as #48a, exhausting to hull refining cyclone.
- (ah) One (1) hull refining aspirator, identified as #49a, exhausting to hull refining cyclone.
- (ai) One (1) totally enclosed millfeed conveyor to storage, identified as #53a.
- (aj) One (1) millfeed elevator, identified as #54a, controlled by millfeed baghouse, and exhausting at stack Pt #16.
- (ak) One (1) seal screw conveyor, identified as #61a.
- (al) One (1) totally enclosed meal screen feeder conveyor, identified as #74a.
- (am) Two (2) totally enclosed sized meal conveyors, identified as #78a.

B-PLANT

- (an) One (1) aspirator between conveyor from storage and surge bin leg, aspirated to truck receiving /storage baghouse, identified as #1b, and exhausting at stack Pt #1.
- (ao) One (1) totally enclosed millfeed conveyor to storage, identified as #2b.
- (ap) One (1) millfeed elevator controlled by millfeed baghouse, identified as #3b, and exhausting at stack Pt #16.
- (aq) One (1) aspirator between milling leg and bean scale, identified as #4b, aspirated to milling baghouse, and exhausting at stack Pt #4.
- (ar) One (1) totally enclosed hull collecting conveyor, identified as #5b, feeding to "B" plant hull refining screener.
- (as) One (1) "B" plant whole bean surge bin #2, identified as #6b, controlled by a cyclone, and the screening baghouse, and exhausting at stack Pt #5.
- (at) One (1) hull refining cyclone, identified as #7b, discharging to the screening baghouse, and exhausting at stack Pt #5.
- (au) One (1) "B" plant whole soybean feed bucket elevator, identified as #8b, controlled by hull refining cyclone, and the screening baghouse, and exhausting at stack Pt #5.
- (av) One (1) "B" plant totally enclosed soybean feed conveyor, identified as #9b.
- (aw) One (1) "B" plant whole bean aspiration, identified as #10b , controlled by the screening baghouse, and exhausting at stack Pt #5.
- (ax) One (1) "B" plant bean weighing system, identified as #11b, controlled by the screening baghouse, and exhausting at stack Pt #5.
- (ay) One (1)"B" plant totally enclosed millfeed grinding conveyor, identified as #12b, controlled by the screening baghouse, and exhausting at stack Pt #5.
- (az) One (1) "B" plant hull refining screener, identified as #13b, controlled by a hull refining cyclone, and the screening baghouse, and exhausting at stack Pt #5.
- (ba) One (1) "B" plant aspirator, identified as #14b, controlled by a hull refining cyclone, and the screening baghouse, and exhausting at stack Pt #5.
- (bb) One (1) "B" plant totally enclosed feed conveyor, identified as #15b.
- (bc) One (1) set of "B" plant bean heaters, identified as #16b, controlled by a bean heater cyclone, and exhausting at stack Pt # 18A.
- (bd) One (1) totally enclosed "B" plant soybean conveyor (feeding the jet dryers), identified as #17b, controlled by a bean heater cyclone, and exhausting at stack Pt # 18A.
- (be) One (1) set of "B" plant jet dryers, identified as #18b, controlled by a dryer cyclone, and exhausting at stack Pt # 18A.
- (bf) One (1) "B" plant bean heaters cyclone, identified as #19b, exhausting at stack Pt # 18A.
- (bg) One (1) "B" plant bean dryers cyclone, identified as #20b, exhausting at stack Pt # 18A.

- (bh) One (1) "B" plant hulloosensors, identified as #21b, maximum total capacity of 127.5 tons per hour.
- (gi) One (1) set of "B" plant cascade dryers, identified as #22b.
- (bj) One (1) set of "B" plant cracking rolls, identified as #23b.
- (bk) One (1) set of "B" plant cascade coolers, identified as #24b, controlled by a ccc cyclone, and exhausting at stack Pt # 18A.
- (bl) Three (3) "B" plant totally enclosed after cascade coolers conveyors (feeding the flakers), identified as #25b, controlled by a ccc cyclone, and exhausting at stack Pt # 18A.
- (bm) One (1) "B" plant ccc cyclone, identified as #26b, exhausting at stack Pt # 18A.
- (bn) One (1) set of "B" plant flakers, identified as #27b, controlled by a flakers baghouse, and exhausting at stack Pt # 19.
- (bo) One (1) "B" plant flakers baghouse, identified as #28b, exhausting at stack Pt # 19.
- (bp) One (1) "B" plant totally enclosed flake conveyor (feeding the seal conveyor), identified as #28b.
- (bq) One (1) "B" plant totally enclosed seal screw conveyor (feeding the slurry loader conveyor), identified as #29b.
- (br) One (1) "B" plant totally enclosed slurry loader conveyor (feeding the extractor), identified as #30b.
- (bs) One (1) "B" plant soybean oil extractor, identified as #31b, controlled by two (2) mineral oil absorbers, and exhausted at stack Pt. # 23.
- (bt) A set of "B" plant evaporators, identified as #32b, controlled by two mineral oil absorbers, and exhausted at stack Pt. # 23.
- (bu) A set of "B" plant condensers and water separator to separate hexane and water, identified as #33b, controlled by two mineral oil absorbers, and exhausted at stack Pt. # 23.
- (bv) Two (2) "B" plant mineral oil absorbers, identified as #34b, exhausting at stack Pt. # 23.
- (bw) One (1) totally enclosed "B" plant spent flake conveyor, identified as #35b.
- (bx) Two (2) "B" plant meal dryers (#3 & #4), identified as #36b, controlled by one (1) dryer cyclone, and exhausting at stack Pt. # 21.
- (by) Two (2) "B" plant meal coolers (#3 & #4), identified as #37b, controlled by one (1) cooler cyclone, and exhausting at stack Pt. # 22.
- (bz) Four (4) "B" plant totally enclosed unground meal conveyors in series (meal screening system), identified as #38b.
- (ca) One (1) meal grinding baghouse, identified as #39b, exhausting at stack Pt #24.)
- (cb) One (1) main 337 MMBtu per hour boiler, natural gas or distillate oil fired, identified as #40b, controlled by low NOx burners and flue gas recirculation, and exhausting at stack Pt. # 20.

- (cc) One (1) screening leg, identified as #41b, transferring screenings from the screenings transfer conveyors to the screening surge bin.
- (cd) One (1) totally enclosed dryer feed conveyor, identified as #42b, transferring beans to the dryer feed elevator, controlled by screening baghouse, and exhausting at stack Pt #5.
- (ce) One (1) day bin, identified as #43b.
- (cf) One (1) meal screen feeder conveyor, identified as #44b.
- (cg) One (1) rail meal loadout conveyor, identified as #45b, controlled by "B" plant rail loadout baghouse. and exhausting at stack Pt #17.
- (ch) One (1) "B" plant rail loader, identified as #46b, controlled by "B" plant rail loadout baghouse and exhausting at stack Pt #17.
- (ci) One (1) rail scale, identified as #47b.
- (cj) One (1) "B" plant rail loadout baghouse, identified as #48b, exhausting at stack Pt #17.

A.4 Part 70 Permit Applicability [326 IAC 2-7-2]

This stationary source is required to have a Part 70 permit by 326 IAC 2-7-2 (Applicability) because:

- (a) It is a major source, as defined in 326 IAC 2-7-1(22); and
- (b) It is a source in a source category designated by the United States Environmental Protection Agency (U.S. EPA) under 40 CFR 70.3 (Part 70 - Applicability).

SECTION B

GENERAL CONDITIONS

B.1 Definitions [326 IAC 2-7-1]

Terms in this permit shall have the definition assigned to such terms in the referenced regulation. In the absence of definitions in the referenced regulation, the applicable definitions found in the statutes or regulations (IC 13-11, 326 IAC 1-2 and 326 IAC 2-7) shall prevail.

B.2 Permit Term [326 IAC 2-7-5(2)] [326 IAC 2-1.1-9.5]

This permit is issued for a fixed term of five (5) years from the issuance date of this permit, as determined in accordance with IC 4-21.5-3-5(f) and IC 13-15-5-3. Subsequent revisions, modifications, or amendments of this permit do not affect the expiration date.

B.3 Enforceability [326 IAC 2-7-7]

Unless otherwise stated, all terms and conditions in this permit, including any provisions designed to limit the source's potential to emit, are enforceable by IDEM, the United States Environmental Protection Agency (U.S. EPA) and by citizens in accordance with the Clean Air Act.

B.4 Termination of Right to Operate [326 IAC 2-7-10] [326 IAC 2-7-4(a)]

The Permittee's right to operate this source terminates with the expiration of this permit unless a timely and complete renewal application is submitted at least nine (9) months prior to the date of expiration of the source's existing permit, consistent with 326 IAC 2-7-3 and 326 IAC 2-7-4(a).

B.5 Severability [326 IAC 2-7-5(5)]

The provisions of this permit are severable; a determination that any portion of this permit is invalid shall not affect the validity of the remainder of the permit.

B.6 Property Rights or Exclusive Privilege [326 IAC 2-7-5(6)(D)]

This permit does not convey any property rights of any sort or any exclusive privilege.

B.7 Duty to Provide Information [326 IAC 2-7-5(6)(E)] [326 IAC 2-7-6(6)]

- (a) The Permittee shall furnish to IDEM, OAQ, within a reasonable time, any information that IDEM, OAQ, may request in writing to determine whether cause exists for modifying, revoking and reissuing, or terminating this permit, or to determine compliance with this permit. The submittal by the Permittee does require the certification by the "responsible official" as defined by 326 IAC 2-7-1(34). Upon request, the Permittee shall also furnish to IDEM, OAQ, copies of records required to be kept by this permit.
- (b) For information furnished by the Permittee to IDEM, OAQ, the Permittee may include a claim of confidentiality in accordance with 326 IAC 17.1. When furnishing copies of requested records directly to U. S. EPA, the Permittee may assert a claim of confidentiality in accordance with 40 CFR 2, Subpart B.

B.8 Certification [326 IAC 2-7-4(f)] [326 IAC 2-7-6(1)] [326 IAC 2-7-5(3)(C)]

- (a) Where specifically designated by this permit or required by an applicable requirement, any application form, report, or compliance certification submitted shall contain certification by a responsible official of truth, accuracy, and completeness. This certification shall state that, based on information and belief formed after reasonable inquiry, the statements and information in the document are true, accurate, and complete.
- (b) One (1) certification shall be included, using the attached Certification Form, with each submittal requiring certification.
- (c) A responsible official is defined at 326 IAC 2-7-1(34).

B.9 Annual Compliance Certification [326 IAC 2-7-6(5)]

- (a) The Permittee shall annually submit a compliance certification report which addresses the status of the source's compliance with the terms and conditions contained in this permit, including emission limitations, standards, or work practices. The initial certification shall cover the time period from the date of final permit issuance through December 31 of the same year. All subsequent certifications shall cover the time period from January 1 to December 31 of the previous year, and shall be submitted in letter form no later than July 1 of each year to:

Indiana Department of Environmental Management
Compliance Branch, Office of Air Quality
100 North Senate Avenue, P. O. Box 6015
Indianapolis, Indiana 46206-6015

and

United States Environmental Protection Agency, Region V
Air and Radiation Division, Air Enforcement Branch - Indiana (AE-17J)
77 West Jackson Boulevard
Chicago, Illinois 60604-3590

- (b) The annual compliance certification report required by this permit shall be considered timely if the date postmarked on the envelope or certified mail receipt, or affixed by the shipper on the private shipping receipt, is on or before the date it is due. If the document is submitted by any other means, it shall be considered timely if received by IDEM, OAQ, on or before the date it is due.
- (c) The annual compliance certification report shall include the following:
- (1) The appropriate identification of each term or condition of this permit that is the basis of the certification;
 - (2) The compliance status;
 - (3) Whether compliance was continuous or intermittent;
 - (4) The methods used for determining the compliance status of the source, currently and over the reporting period consistent with 326 IAC 2-7-5(3); and
 - (5) Such other facts, as specified in Sections D of this permit, as IDEM, OAQ, may require to determine the compliance status of the source.

The submittal by the Permittee does require the certification by the "responsible official" as defined by 326 IAC 2-7-1(34).

B.10 Preventive Maintenance Plan [326 IAC 2-7-5(1),(3) and (13)] [326 IAC 2-7-6(1) and (6)] [326 IAC 1-6-3]

- (a) If required by specific condition(s) in Section D of this permit, the Permittee shall prepare and maintain Preventive Maintenance Plans (PMPs) within ninety (90) days after issuance of this permit, including the following information on each facility:
- (1) Identification of the individual(s) responsible for inspecting, maintaining, and repairing emission control devices;
 - (2) A description of the items or conditions that will be inspected and the inspection

schedule for said items or conditions; and

- (3) Identification and quantification of the replacement parts that will be maintained in inventory for quick replacement.

If, due to circumstances beyond the Permittee's control, the PMPs cannot be prepared and maintained within the above time frame, the Permittee may extend the date an additional ninety (90) days provided the Permittee notifies:

Indiana Department of Environmental Management
Compliance Branch, Office of Air Quality
100 North Senate Avenue, P. O. Box 6015
Indianapolis, Indiana 46206-6015

The PMP extension notification does not require the certification by the "responsible official" as defined by 326 IAC 2-7-1(34).

- (b) The Permittee shall implement the PMPs, including any required record keeping, as necessary to ensure that failure to implement a PMP does not cause or contribute to an exceedance of any limitation on emissions or potential to emit.
- (c) A copy of the PMPs shall be submitted to IDEM, OAQ, upon request and within a reasonable time, and shall be subject to review and approval by IDEM, OAQ. IDEM, OAQ, may require the Permittee to revise its PMPs whenever lack of proper maintenance causes or is the primary contributor to an exceedance of any limitation on emissions or potential to emit. The PMP does not require the certification by the "responsible official" as defined by 326 IAC 2-7-1(34).
- (d) To the extent the Permittee is required by 40 CFR Part 60/63 to have an Operation, Maintenance, and Monitoring (OMM) Plan for a unit, such Plan is deemed to satisfy the PMP requirements of 326 IAC 1-6-3 for that unit.

B.11 Emergency Provisions [326 IAC 2-7-16]

- (a) An emergency, as defined in 326 IAC 2-7-1(12), is not an affirmative defense for an action brought for noncompliance with a federal or state health-based emission limitation.
- (b) An emergency, as defined in 326 IAC 2-7-1(12), constitutes an affirmative defense to an action brought for noncompliance with a technology-based emission limitation if the affirmative defense of an emergency is demonstrated through properly signed, contemporaneous operating logs or other relevant evidence that describe the following:
 - (1) An emergency occurred and the Permittee can, to the extent possible, identify the causes of the emergency;
 - (2) The permitted facility was at the time being properly operated;
 - (3) During the period of an emergency, the Permittee took all reasonable steps to minimize levels of emissions that exceeded the emission standards or other requirements in this permit;
 - (4) For each emergency lasting one (1) hour or more, the Permittee notified IDEM, OAQ, within four (4) daytime business hours after the beginning of the emergency, or after the emergency was discovered or reasonably should have been discovered;

Telephone Number: 1-800-451-6027 (ask for Office of Air Quality,
Compliance Section), or
Telephone Number: 317-233-5674 (ask for Compliance Section)
Facsimile Number: 317-233-5967

- (5) For each emergency lasting one (1) hour or more, the Permittee submitted the attached Emergency Occurrence Report Form or its equivalent, either by mail or facsimile to:

Indiana Department of Environmental Management
Compliance Branch, Office of Air Quality
100 North Senate Avenue, P. O. Box 6015
Indianapolis, Indiana 46206-6015

within two (2) working days of the time when emission limitations were exceeded due to the emergency.

The notice fulfills the requirement of 326 IAC 2-7-5(3)(C)(ii) and must contain the following:

- (A) A description of the emergency;
- (B) Any steps taken to mitigate the emissions; and
- (C) Corrective actions taken.

The notification which shall be submitted by the Permittee does not require the certification by the "responsible official" as defined by 326 IAC 2-7-1(34).

- (6) The Permittee immediately took all reasonable steps to correct the emergency.
- (c) In any enforcement proceeding, the Permittee seeking to establish the occurrence of an emergency has the burden of proof.
- (d) This emergency provision supersedes 326 IAC 1-6 (Malfunctions). This permit condition is in addition to any emergency or upset provision contained in any applicable requirement.
- (e) IDEM, OAQ, may require that the Preventive Maintenance Plans required under 326 IAC 2-7-4-(c)(9) be revised in response to an emergency.
- (f) Failure to notify IDEM, OAQ, by telephone or facsimile of an emergency lasting more than one (1) hour in accordance with (b)(4) and (5) of this condition shall constitute a violation of 326 IAC 2-7 and any other applicable rules.
- (g) If the emergency situation causes a deviation from a technology-based limit, the Permittee may continue to operate the affected emitting facilities during the emergency provided the Permittee immediately takes all reasonable steps to correct the emergency and minimize emissions.
- (h) The Permittee shall include all emergencies in the Quarterly Deviation and Compliance Monitoring Report.

B.12 Permit Shield [326 IAC 2-7-15] [326 IAC 2-7-20] [326 IAC 2-7-12]

- (a) Pursuant to 326 IAC 2-7-15, the Permittee has been granted a permit shield. The permit shield provides that compliance with the conditions of this permit shall be deemed in

compliance with any applicable requirements as of the date of permit issuance, provided that either the applicable requirements are included and specifically identified in this permit or the permit contains an explicit determination or concise summary of a determination that other specifically identified requirements are not applicable. The Indiana statutes from IC 13 and rules from 326 IAC, referenced in conditions in this permit, are those applicable at the time the permit was issued. The issuance or possession of this permit shall not alone constitute a defense against an alleged violation of any law, regulation or standard, except for the requirement to obtain a Part 70 permit under 326 IAC 2-7 or for applicable requirements for which a permit shield has been granted.

This permit shield does not extend to applicable requirements which are promulgated after the date of issuance of this permit unless this permit has been modified to reflect such new requirements.

- (b) If, after issuance of this permit, it is determined that the permit is in nonconformance with an applicable requirement that applied to the source on the date of permit issuance, IDEM, OAQ, shall immediately take steps to reopen and revise this permit and issue a compliance order to the Permittee to ensure expeditious compliance with the applicable requirement until the permit is reissued. The permit shield shall continue in effect so long as the Permittee is in compliance with the compliance order.
- (c) No permit shield shall apply to any permit term or condition that is determined after issuance of this permit to have been based on erroneous information supplied in the permit application. Erroneous information means information that the Permittee knew to be false, or in the exercise of reasonable care should have been known to be false, at the time the information was submitted.
- (d) Nothing in 326 IAC 2-7-15 or in this permit shall alter or affect the following:
 - (1) The provisions of Section 303 of the Clean Air Act (emergency orders), including the authority of the U.S. EPA under Section 303 of the Clean Air Act;
 - (2) The liability of the Permittee for any violation of applicable requirements prior to or at the time of this permit's issuance;
 - (3) The applicable requirements of the acid rain program, consistent with Section 408(a) of the Clean Air Act; and
 - (4) The ability of U.S. EPA to obtain information from the Permittee under Section 114 of the Clean Air Act.
- (e) This permit shield is not applicable to any change made under 326 IAC 2-7-20(b)(2) (Sections 502(b)(10) of the Clean Air Act changes) and 326 IAC 2-7-20(c)(2) (trading based on State Implementation Plan (SIP) provisions).
- (f) This permit shield is not applicable to modifications eligible for group processing until after IDEM, OAQ, has issued the modifications. [326 IAC 2-7-12(c)(7)]
- (g) This permit shield is not applicable to minor Part 70 permit modifications until after IDEM, OAQ, has issued the modification. [326 IAC 2-7-12(b)(8)]

B.13 Prior Permits Superseded [326 IAC 2-1.1-9.5]

- (a) All terms and conditions of previous permits issued pursuant to permitting programs approved into the state implementation plan have been either

- (1) incorporated as originally stated,
- (2) revised, or
- (3) deleted

by this permit.

- (b) All previous registrations and permits are superseded by this permit.

B.14 Deviations from Permit Requirements and Conditions [326 IAC 2-7-5(3)(C)(ii)]

- (a) Deviations from any permit requirements (for emergencies see Section B - Emergency Provisions), the probable cause of such deviations, and any response steps or preventive measures taken shall be reported to:

Indiana Department of Environmental Management
Compliance Data Section, Office of Air Quality
100 North Senate Avenue, P.O. Box 6015
Indianapolis, Indiana 46206-6015

using the attached Quarterly Deviation and Compliance Monitoring Report, or its equivalent. A deviation required to be reported pursuant to an applicable requirement that exists independent of this permit shall be reported according to the schedule stated in the applicable requirement and does not need to be included in this report.

The Quarterly Deviation and Compliance Monitoring Report does require the certification by the "responsible official" as defined by 326 IAC 2-7-1(34).

- (b) A deviation is an exceedance of a permit limitation or a failure to comply with a requirement of the permit.

B.15 Permit Modification, Reopening, Revocation and Reissuance, or Termination [326 IAC 2-7-5(6)(C)] [326 IAC 2-7-8(a)] [326 IAC 2-7-9]

- (a) This permit may be modified, reopened, revoked and reissued, or terminated for cause. The filing of a request by the Permittee for a Part 70 permit modification, revocation and reissuance, or termination, or of a notification of planned changes or anticipated noncompliance does not stay any condition of this permit. [326 IAC 2-7-5(6)(C)] The notification by the Permittee does require the certification by the "responsible official" as defined by 326 IAC 2-7-1(34).
- (b) This permit shall be reopened and revised under any of the circumstances listed in IC 13-15-7-2 or if IDEM, OAQ, determines any of the following:
 - (1) That this permit contains a material mistake.
 - (2) That inaccurate statements were made in establishing the emissions standards or other terms or conditions.
 - (3) That this permit must be revised or revoked to assure compliance with an applicable requirement. [326 IAC 2-7-9(a)(3)]
- (c) Proceedings by IDEM, OAQ, to reopen and revise this permit shall follow the same procedures as apply to initial permit issuance and shall affect only those parts of this permit for which cause to reopen exists. Such reopening and revision shall be made as expeditiously as practicable. [326 IAC 2-7-9(b)]

- (d) The reopening and revision of this permit, under 326 IAC 2-7-9(a), shall not be initiated before notice of such intent is provided to the Permittee by IDEM, OAQ, at least thirty (30) days in advance of the date this permit is to be reopened, except that IDEM, OAQ, may provide a shorter time period in the case of an emergency. [326 IAC 2-7-9(c)]

B.16 Permit Renewal [326 IAC 2-7-4]

- (a) The application for renewal shall be submitted using the application form or forms prescribed by IDEM, OAQ, and shall include the information specified in 326 IAC 2-7-4. Such information shall be included in the application for each emission unit at this source, except those emission units included on the trivial or insignificant activities list contained in 326 IAC 2-7-1(21) and 326 IAC 2-7-1(40). The renewal application does require the certification by the "responsible official" as defined by 326 IAC 2-7-1(34).

Request for renewal shall be submitted to:

Indiana Department of Environmental Management
Permits Branch, Office of Air Quality
100 North Senate Avenue, P.O. Box 6015
Indianapolis, Indiana 46206-6015

- (b) Timely Submittal of Permit Renewal [326 IAC 2-7-4(a)(1)(D)]
- (1) A timely renewal application is one that is:
- (A) Submitted at least nine (9) months prior to the date of the expiration of this permit; and
- (B) If the date postmarked on the envelope or certified mail receipt, or affixed by the shipper on the private shipping receipt, is on or before the date it is due. If the document is submitted by any other means, it shall be considered timely if received by IDEM, OAQ, on or before the date it is due.
- (2) If IDEM, OAQ, upon receiving a timely and complete permit application, fails to issue or deny the permit renewal prior to the expiration date of this permit, this existing permit shall not expire and all terms and conditions shall continue in effect, including any permit shield provided in 326 IAC 2-7-15, until the renewal permit has been issued or denied.
- (c) Right to Operate After Application for Renewal [326 IAC 2-7-3]
If the Permittee submits a timely and complete application for renewal of this permit, the source's failure to have a permit is not a violation of 326 IAC 2-7 until IDEM, OAQ, takes final action on the renewal application, except that this protection shall cease to apply if, subsequent to the completeness determination, the Permittee fails to submit by the deadline specified in writing by IDEM, OAQ, any additional information identified as being needed to process the application.
- (d) United States Environmental Protection Agency Authority [326 IAC 2-7-8(e)]
If IDEM, OAQ, fails to act in a timely way on a Part 70 permit renewal, the U.S. EPA may invoke its authority under Section 505(e) of the Clean Air Act to terminate or revoke and reissue a Part 70 permit.

B.17 Permit Amendment or Modification [326 IAC 2-7-11] [326 IAC 2-7-12]

- (a) Permit amendments and modifications are governed by the requirements of 326 IAC 2-7-

11 or 326 IAC 2-7-12 whenever the Permittee seeks to amend or modify this permit.

- (b) Any application requesting an amendment or modification of this permit shall be submitted to:

Indiana Department of Environmental Management
Permits Branch, Office of Air Quality
100 North Senate Avenue, P.O. Box 6015
Indianapolis, Indiana 46206-6015

Any such application shall be certified by the "responsible official" as defined by 326 IAC 2-7-1(34).

- (c) The Permittee may implement administrative amendment changes addressed in the request for an administrative amendment immediately upon submittal of the request. [326 IAC 2-7-11(c)(3)]
- (d) No permit amendment or modification is required for the addition, operation, or removal of a nonroad engine, as defined in 40 CFR 89.2

B.18 Permit Revision Under Economic Incentives and Other Programs [326 IAC 2-7-5(8)] [326 IAC 2-7-12 (b)(2)]

- (a) No Part 70 permit revision shall be required under any approved economic incentives, marketable Part 70 permits, emissions trading, and other similar programs or processes for changes that are provided for in a Part 70 permit.
- (b) Notwithstanding 326 IAC 2-7-12(b)(1) and 326 IAC 2-7-12(c)(1), minor Part 70 permit modification procedures may be used for Part 70 modifications involving the use of economic incentives, marketable Part 70 permits, emissions trading, and other similar approaches to the extent that such minor Part 70 permit modification procedures are explicitly provided for in the applicable State Implementation Plan (SIP) or in applicable requirements promulgated or approved by the U.S. EPA.

B.19 Operational Flexibility [326 IAC 2-7-20] [326 IAC 2-7-10.5]

- (a) The Permittee may make any change or changes at the source that are described in 326 IAC 2-7-20(b), (c), or (e), without a prior permit revision, if each of the following conditions is met:

- (1) The changes are not modifications under any provision of Title I of the Clean Air Act;
- (2) Any preconstruction approval required by 326 IAC 2-7-10.5 has been obtained;
- (3) The changes do not result in emissions which exceed the emissions allowable under this permit (whether expressed herein as a rate of emissions or in terms of total emissions);
- (4) The Permittee notifies the:

Indiana Department of Environmental Management
Permits Branch, Office of Air Quality
100 North Senate Avenue, P. O. Box 6015
Indianapolis, Indiana 46206-6015

and

United States Environmental Protection Agency, Region V
Air and Radiation Division, Regulation Development Branch - Indiana (AR-18J)
77 West Jackson Boulevard
Chicago, Illinois 60604-3590

in advance of the change by written notification at least ten (10) days in advance of the proposed change. The Permittee shall attach every such notice to the Permittee's copy of this permit; and

- (5) The Permittee maintains records on-site which document, on a rolling five (5) year basis, all such changes and emissions trading that are subject to 326 IAC 2-7-20(b), (c), or (e) and makes such records available, upon reasonable request, for public review.

Such records shall consist of all information required to be submitted to IDEM, OAQ, in the notices specified in 326 IAC 2-7-20(b)(1), (c)(1), and (e)(2).

- (b) The Permittee may make Section 502(b)(10) of the Clean Air Act changes (this term is defined at 326 IAC 2-7-1(36)) without a permit revision, subject to the constraint of 326 IAC 2-7-20(a). For each such Section 502(b)(10) of the Clean Air Act change, the required written notification shall include the following:

- (1) A brief description of the change within the source;
- (2) The date on which the change will occur;
- (3) Any change in emissions; and
- (4) Any permit term or condition that is no longer applicable as a result of the change.

The notification which shall be submitted is not considered an application form, report or compliance certification. Therefore, the notification by the Permittee does not require the certification by the "responsible official" as defined by 326 IAC 2-7-1(34).

- (c) Emission Trades [326 IAC 2-7-20(c)]
The Permittee may trade increases and decreases in emissions in the source, where the applicable SIP provides for such emission trades without requiring a permit revision, subject to the constraints of Section (a) of this condition and those in 326 IAC 2-7-20(c).
- (d) Alternative Operating Scenarios [326 IAC 2-7-20(d)]
The Permittee may make changes at the source within the range of alternative operating scenarios that are described in the terms and conditions of this permit in accordance with 326 IAC 2-7-5(9). No prior notification of IDEM, OAQ, or U.S. EPA is required.

B.20 Source Modification Requirement [326 IAC 2-7-10.5]

A modification, construction, or reconstruction is governed by the requirements of 326 IAC 2 and 326 IAC 2-7-10.5.

B.21 Inspection and Entry [326 IAC 2-7-6] [IC 13-14-2-2][IC 13-30-3-1] [IC13-17-3-2]

Upon presentation of proper identification cards, credentials, and other documents as may be required by law, and subject to the Permittee's right under all applicable laws and regulations to assert that the information collected by the agency is confidential and entitled to be treated as such, the Permittee shall allow IDEM, OAQ, U.S. EPA, or an authorized representative to perform the following:

- (a) Enter upon the Permittee's premises where a Part 70 source is located, or emissions related activity is conducted, or where records must be kept under the conditions of this permit;
- (b) As authorized by the Clean Air Act, IC 13-14-2-2, IC 13-17-3-2, and IC 13-30-3-1, have access to and copy any records that must be kept under the conditions of this permit;
- (c) As authorized by the Clean Air Act, IC 13-14-2-2, IC 13-17-3-2, and IC 13-30-3-1, inspect any facilities, equipment (including monitoring and air pollution control equipment), practices, or operations regulated or required under this permit;
- (d) As authorized by the Clean Air Act, IC 13-14-2-2, IC 13-17-3-2, and IC 13-30-3-1, sample or monitor substances or parameters for the purpose of assuring compliance with this permit or applicable requirements; and
- (e) As authorized by the Clean Air Act, IC 13-14-2-2, IC 13-17-3-2, and IC 13-30-3-1, utilize any photographic, recording, testing, monitoring, or other equipment for the purpose of assuring compliance with this permit or applicable requirements.

B.22 Transfer of Ownership or Operational Control [326 IAC 2-7-11]

- (a) The Permittee must comply with the requirements of 326 IAC 2-7-11 whenever the Permittee seeks to change the ownership or operational control of the source and no other change in the permit is necessary.
- (b) Any application requesting a change in the ownership or operational control of the source shall contain a written agreement containing a specific date for transfer of permit responsibility, coverage and liability between the current and new Permittee. The application shall be submitted to:

Indiana Department of Environmental Management
Permits Branch, Office of Air Quality
100 North Senate Avenue, P.O. Box 6015
Indianapolis, Indiana 46206-6015

The application which shall be submitted by the Permittee does require the certification by the "responsible official" as defined by 326 IAC 2-7-1(34).
- (c) The Permittee may implement administrative amendment changes addressed in the request for an administrative amendment immediately upon submittal of the request. [326 IAC 2-7-11(c)(3)]

B.23 Annual Fee Payment [326 IAC 2-7-19] [326 IAC 2-7-5(7)] [326 IAC 2-1.1-7]

- (a) The Permittee shall pay annual fees to IDEM, OAQ, within thirty (30) calendar days of receipt of a billing. Pursuant to 326 IAC 2-7-19(b), if the Permittee does not receive a bill from IDEM, OAQ, the applicable fee is due April 1 of each year.
- (b) Except as provided in 326 IAC 2-7-19(e), failure to pay may result in administrative enforcement action or revocation of this permit.
- (c) The Permittee may call the following telephone numbers: 1-800-451-6027 or 317-233-4230 (ask for OAQ, Billing, Licensing, and Training Section (BLT)), to determine the appropriate permit fee.

B.24 Credible Evidence [326 IAC 2-7-5(3)][326 IAC 2-7-6][62 FR 8314]

Notwithstanding the conditions of this permit that state specific methods that may be used to demonstrate compliance with, or a violation of, applicable requirements, any person (including the

Permittee) may also use other credible evidence to demonstrate compliance with, or a violation of, any term or condition of this permit.

SECTION C

SOURCE OPERATION CONDITIONS

Entire Source

Emission Limitations and Standards [326 IAC 2-7-5(1)]

C.1 Particulate Emission Limitations For Processes with Process Weight Rates Less Than One Hundred (100) pounds per hour [326 IAC 6-3-2][40 CFR 52, Subpart P]

- (a) Pursuant to 40 CFR 52, Subpart P, particulate emissions from any process not already regulated by 326 IAC 6-1 or any New Source Performance Standard, and which has a maximum process weight rate less than 100 pounds per hour shall not exceed 0.551 pounds per hour.
- (b) Pursuant to 326 IAC 6-3-2(e)(2), particulate emissions from any process not exempt under 326 IAC 6-3-1(b) or (c) which has a maximum process weight rate less than 100 pounds per hour and the methods in 326 IAC 6-3-2(b) through (d) do not apply shall not exceed 0.551 pounds per hour. This condition is not federally enforceable.

C.2 Opacity [326 IAC 5-1]

Pursuant to 326 IAC 5-1-2 (Opacity Limitations), except as provided in 326 IAC 5-1-3 (Temporary Alternative Opacity Limitations), opacity shall meet the following, unless otherwise stated in this permit:

- (a) Opacity shall not exceed an average of forty percent (40%) in any one (1) six (6) minute averaging period as determined in 326 IAC 5-1-4.
- (b) Opacity shall not exceed sixty percent (60%) for more than a cumulative total of fifteen (15) minutes (sixty (60) readings as measured according to 40 CFR 60, Appendix A, Method 9 or fifteen (15) one (1) minute nonoverlapping integrated averages for a continuous opacity monitor) in a six (6) hour period.

C.3 Open Burning [326 IAC 4-1] [IC 13-17-9]

The Permittee shall not open burn any material except as provided in 326 IAC 4-1-3, 326 IAC 4-1-4 or 326 IAC 4-1-6. The previous sentence notwithstanding, the Permittee may open burn in accordance with an open burning approval issued by the Commissioner under 326 IAC 4-1-4.1. 326 IAC 4-1-3 (a)(2)(A) and (B) are not federally enforceable.

C.4 Incineration [326 IAC 4-2] [326 IAC 9-1-2]

The Permittee shall not operate an incinerator or incinerate any waste or refuse except as provided in 326 IAC 4-2 and 326 IAC 9-1-2. 326 IAC 9-1-2 is not federally enforceable.

C.5 Fugitive Dust Emissions [326 IAC 6-4]

The Permittee shall not allow fugitive dust to escape beyond the property line or boundaries of the property, right-of-way, or easement on which the source is located, in a manner that would violate 326 IAC 6-4 (Fugitive Dust Emissions). 326 IAC 6-4-2(4) is not federally enforceable.

C.6 Operation of Equipment [326 IAC 2-7-6(6)]

Except as otherwise provided by statute or rule, or in this permit, all air pollution control equipment listed in this permit and used to comply with an applicable requirement shall be operated at all times that the emission units vented to the control equipment are in operation.

C.7 Stack Height [326 IAC 1-7]

The Permittee shall comply with the applicable provisions of 326 IAC 1-7 (Stack Height Provisions), for all exhaust stacks through which a potential (before controls) of twenty-five (25)

tons per year or more of particulate matter or sulfur dioxide is emitted. The provisions of 326 IAC 1-7-1(3), 1-7-2, 326 IAC 1-7-3(c) and (d), 326 IAC 1-7-4, and 326 IAC 1-7-5(a), (b), and (d) are not federally enforceable.

C.8 Asbestos Abatement Projects [326 IAC 14-10] [326 IAC 18] [40 CFR 61, Subpart M]

- (a) Notification requirements apply to each owner or operator. If the combined amount of regulated asbestos containing material (RACM) to be stripped, removed or disturbed is at least 260 linear feet on pipes or 160 square feet on other facility components, or at least thirty-five (35) cubic feet on all facility components, then the notification requirements of 326 IAC 14-10-3 are mandatory. All demolition projects require notification whether or not asbestos is present.
- (b) The Permittee shall ensure that a written notification is sent on a form provided by the Commissioner at least ten (10) working days before asbestos stripping or removal work or before demolition begins, per 326 IAC 14-10-3, and shall update such notice as necessary, including, but not limited to the following:
- (1) When the amount of affected asbestos containing material increases or decreases by at least twenty percent (20%); or
 - (2) If there is a change in the following:
 - (A) Asbestos removal or demolition start date;
 - (B) Removal or demolition contractor; or
 - (C) Waste disposal site.
- (c) The Permittee shall ensure that the notice is postmarked or delivered according to the guidelines set forth in 326 IAC 14-10-3(2).
- (d) The notice to be submitted shall include the information enumerated in 326 IAC 14-10-3(3).

All required notifications shall be submitted to:

Indiana Department of Environmental Management
Asbestos Section, Office of Air Quality
100 North Senate Avenue, P.O. Box 6015
Indianapolis, Indiana 46206-6015

The notice shall include a signed certification from the owner or operator that the information provided in this notification is correct and that only Indiana licensed workers and project supervisors will be used to implement the asbestos removal project. The notifications do not require a certification by the "responsible official" as defined by 326 IAC 2-7-1(34).

- (e) Procedures for Asbestos Emission Control
The Permittee shall comply with the applicable emission control procedures in 326 IAC 14-10-4 and 40 CFR 61.145(c). Per 326 IAC 14-10-1, emission control requirements are applicable for any removal or disturbance of RACM greater than three (3) linear feet on pipes or three (3) square feet on any other facility components or a total of at least 0.75 cubic feet on all facility components.
- (f) Demolition and Renovation

The Permittee shall thoroughly inspect the affected facility or part of the facility where the demolition or renovation will occur for the presence of asbestos pursuant to 40 CFR 61.145(a).

- (g) Indiana Accredited Asbestos Inspector
The Permittee shall comply with 326 IAC 14-10-1(a) that requires the owner or operator, prior to a renovation/demolition, to use an Indiana Accredited Asbestos Inspector to thoroughly inspect the affected portion of the facility for the presence of asbestos. The requirement to use an Indiana Accredited Asbestos Inspector is not federally enforceable.

Testing Requirements [326 IAC 2-7-6(1)]

C.9 Performance Testing [326 IAC 3-6]

- (a) All testing shall be performed according to the provisions of 326 IAC 3-6 (Source Sampling Procedures), except as provided elsewhere in this permit, utilizing any applicable procedures and analysis methods specified in 40 CFR 51, 40 CFR 60, 40 CFR 61, 40 CFR 63, 40 CFR 75, or other procedures approved by IDEM, OAQ.

A test protocol, except as provided elsewhere in this permit, shall be submitted to:

Indiana Department of Environmental Management
Compliance Data Section, Office of Air Quality
100 North Senate Avenue, P. O. Box 6015
Indianapolis, Indiana 46206-6015

no later than thirty-five (35) days prior to the intended test date. The protocol submitted by the Permittee does not require certification by the "responsible official" as defined by 326 IAC 2-7-1(34).

- (b) The Permittee shall notify IDEM, OAQ of the actual test date at least fourteen (14) days prior to the actual test date. The notification submitted by the Permittee does not require certification by the "responsible official" as defined by 326 IAC 2-7-1(34).
- (c) Pursuant to 326 IAC 3-6-4(b), all test reports must be received by IDEM, OAQ not later than forty-five (45) days after the completion of the testing. An extension may be granted by IDEM, OAQ, if the Permittee submits to IDEM, OAQ, a reasonable written explanation not later than five (5) days prior to the end of the initial forty-five (45) day period.

Compliance Requirements [326 IAC 2-1.1-11]

C.10 Compliance Requirements [326 IAC 2-1.1-11]

The commissioner may require stack testing, monitoring, or reporting at any time to assure compliance with all applicable requirements by issuing an order under 326 IAC 2-1.1-11. Any monitoring or testing shall be performed in accordance with 326 IAC 3 or other methods approved by the commissioner or the U. S. EPA.

Compliance Monitoring Requirements [326 IAC 2-7-5(1)] [326 IAC 2-7-6(1)]

C.11 Compliance Monitoring [326 IAC 2-7-5(3)] [326 IAC 2-7-6(1)]

Unless otherwise specified in this permit, all monitoring and record keeping requirements not already legally required shall be implemented within ninety (90) days of permit issuance. If required by Section D, the Permittee shall be responsible for installing any necessary equipment and initiating any required monitoring related to that equipment. If due to circumstances beyond its control, that equipment cannot be installed and operated within ninety (90) days, the Permittee may extend the compliance schedule related to the equipment for an additional ninety (90) days provided the Permittee notifies:

Indiana Department of Environmental Management
Compliance Branch, Office of Air Quality
100 North Senate Avenue, P. O. Box 6015
Indianapolis, Indiana 46206-6015

in writing, prior to the end of the initial ninety (90) day compliance schedule, with full justification of the reasons for the inability to meet this date.

The notification which shall be submitted by the Permittee does require the certification by the "responsible official" as defined by 326 IAC 2-7-1(34).

Unless otherwise specified in the approval for the new emission unit(s), compliance monitoring for new emission units or emission units added through a source modification shall be implemented when operation begins.

C.12 Monitoring Methods [326 IAC 3] [40 CFR 60] [40 CFR 63]

Any monitoring or testing required by Section D of this permit shall be performed according to the provisions of 326 IAC 3, 40 CFR 60, Appendix A, 40 CFR 60 Appendix B, 40 CFR 63, or other approved methods as specified in this permit.

C.13 Pressure Gauge and Other Instrument Specifications [326 IAC 2-1.1-11] [326 IAC 2-7-5(3)] [326 IAC 2-7-6(1)]

- (a) Whenever a condition in this permit requires the measurement of pressure drop across any part of the unit or its control device, the gauge employed shall have a scale such that the expected normal reading shall be no less than twenty percent (20%) of full scale and be accurate within plus or minus two percent ($\pm 2\%$) of full scale reading.
- (b) Whenever a condition in this permit requires the measurement of a flow rate or temperature, the instrument employed shall have a scale such that the expected normal reading shall be no less than twenty percent (20%) of full scale and be accurate within plus or minus two percent ($\pm 2\%$) of full scale reading.
- (c) The Permittee may request the IDEM, OAQ approve the use of a pressure gauge or other instrument that does not meet the above specifications provided the Permittee can demonstrate an alternative pressure gauge or other instrument specification will adequately ensure compliance with permit conditions requiring the measurement of pressure drop or other parameters.

Corrective Actions and Response Steps [326 IAC 2-7-5] [326 IAC 2-7-6]

C.14 Emergency Reduction Plans [326 IAC 1-5-2] [326 IAC 1-5-3]

Pursuant to 326 IAC 1-5-2 (Emergency Reduction Plans; Submission):

- (a) The Permittee shall prepare written emergency reduction plans (ERPs) consistent with safe operating procedures.
- (b) These ERPs shall be submitted for approval to:

Indiana Department of Environmental Management
Compliance Branch, Office of Air Quality
100 North Senate Avenue, P.O. Box 6015
Indianapolis, Indiana 46206-6015

within ninety (90) days after the date of issuance of this permit.

The ERP does require the certification by the “responsible official” as defined by 326 IAC 2-7-1(34).

- (c) If the ERP is disapproved by IDEM, OAQ, the Permittee shall have an additional thirty (30) days to resolve the differences and submit an approvable ERP.
- (d) These ERPs shall state those actions that will be taken, when each episode level is declared, to reduce or eliminate emissions of the appropriate air pollutants.
- (e) Said ERPs shall also identify the sources of air pollutants, the approximate amount of reduction of the pollutants, and a brief description of the manner in which the reduction will be achieved.
- (f) Upon direct notification by IDEM, OAQ, that a specific air pollution episode level is in effect, the Permittee shall immediately put into effect the actions stipulated in the approved ERP for the appropriate episode level. [326 IAC 1-5-3]

C.15 Risk Management Plan [326 IAC 2-7-5(12)] [40 CFR 68]

If a regulated substance, as defined in 40 CFR 68, is present at a source in more than a threshold quantity, the Permittee must comply with the applicable requirements of 40 CFR 68.

C.16 Compliance Response Plan - Preparation, Implementation, Records, and Reports [326 IAC 2-7-5] [326 IAC 2-7-6]

- (a) The Permittee is required to prepare a Compliance Response Plan (CRP) for each compliance monitoring condition of this permit. If a Permittee is required to have Operation, Maintenance and Monitoring Plan or Parametric Monitoring Plan and Start-up, Shutdown, and Malfunction (SSM) Plan under 40 CFR 60/63, such plans shall be deemed to satisfy the requirements for a CRP for those compliance monitoring conditions. A CRP shall be submitted to IDEM, OAQ upon request. The CRP shall be prepared within ninety (90) days after issuance of this permit by the Permittee, supplemented from time to time by the Permittee, maintained on site, and comprised of:
 - (1) Reasonable response steps that may be implemented in the event that a response step is needed pursuant to the requirements of Section D of this permit; and an expected timeframe for taking reasonable response steps.
 - (2) If, at any time, the Permittee takes reasonable response steps that are not set forth in the Permittee’s current Compliance Response Plan or Operation, Maintenance and Monitoring (OMM) Plan or Parametric Monitoring Plan and Start-up, Shutdown, and Malfunction (SSM) Plan and the Permittee documents such response in accordance with subsection (e) below, the Permittee shall amend its Compliance Response Plan to include such response steps taken.

The OMM Plan or Parametric Monitoring Plan and Start-up, Shutdown, and Malfunction (SSM) Plan shall be submitted within the time frames specified by the applicable 40 CFR 60/63 requirement.

- (b) For each compliance monitoring condition of this permit, reasonable response steps shall be taken when indicated by the provisions of that compliance monitoring condition as follows:
 - (1) Reasonable response steps shall be taken as set forth in the Permittee’s current Compliance Response Plan or Operation, Maintenance and Monitoring (OMM) Plan or Parametric Monitoring Plan and Start-up, Shutdown, and Malfunction (SSM) Plan; or

- (2) If none of the reasonable response steps listed in the Compliance Response Plan or Operation, Maintenance and Monitoring (OMM) Plan or Parametric Monitoring Plan and Start-up, Shutdown, and Malfunction (SSM) Plan in applicable or responsive to the excursion, the Permittee shall devise and implement additional response steps as expeditiously as practical. Taking such additional response steps shall not be considered a deviation from this permit so long as the Permittee documents such response steps in accordance with this condition.
 - (3) If the Permittee determines that additional response steps would necessitate that the emissions unit or control device be shut down, and it will be ten (10) days or more until the unit or device will be shut down, then the Permittee shall promptly notify the IDEM, OAQ of the expected date of the shut down. The notification shall also include the status of the applicable compliance monitoring parameter with respect to normal, and the results of the response actions taken up to the time of notification.
 - (4) Failure to take reasonable response steps shall be considered a deviation from the permit.
- (c) The Permittee is not required to take any further response steps for any of the following reasons:
- (1) A false reading occurs due to the malfunction of the monitoring equipment and prompt action was taken to correct the monitoring equipment.
 - (2) The Permittee has determined that the compliance monitoring parameters established in the permit conditions are technically inappropriate, has previously submitted a request for a minor permit modification to the permit, and such request has not been denied.
 - (3) An automatic measurement was taken when the process was not operating.
 - (4) The process has already returned or is returning to operating within "normal" parameters and no response steps are required.
- (d) When implementing reasonable response steps in response to a compliance monitoring condition, if the Permittee determines that an exceedance of an emission limitation has occurred, the Permittee shall report such deviations pursuant to Section B - Deviations from Permit Requirements and Conditions.
- (e) The Permittee shall record all instances when, in accordance with Section D, response steps are taken. In the event of an emergency, the provisions of 326 IAC 2-7-16 (Emergency Provisions) requiring prompt corrective action to mitigate emissions shall prevail.
- (f) Except as otherwise provided by a rule or provided specifically in Section D, all monitoring as required in Section D shall be performed when the emission unit is operating, except for time necessary to perform quality assurance and maintenance activities.

C.17 Actions Related to Noncompliance Demonstrated by a Stack Test [326 IAC 2-7-5] [326 IAC 2-7-6]

- (a) When the results of a stack test performed in conformance with Section C - Performance Testing, of this permit exceed the level specified in any condition of this permit, the Permittee shall take appropriate response actions. The Permittee shall submit a description of these response actions to IDEM, OAQ, within thirty (30) days of receipt of the test results. The Permittee shall take appropriate action to minimize excess emissions from the affected facility while the response actions are being implemented.

- (b) A retest to demonstrate compliance shall be performed within one hundred twenty (120) days of receipt of the original test results. Should the Permittee demonstrate to IDEM, OAQ that retesting in one-hundred and twenty (120) days is not practicable, IDEM, OAQ may extend the retesting deadline.
- (c) IDEM, OAQ reserves the authority to take any actions allowed under law in response to noncompliant stack tests.

The response action documents submitted pursuant to this condition do require the certification by the "responsible official" as defined by 326 IAC 2-7-1(34).

Record Keeping and Reporting Requirements [326 IAC 2-7-5(3)] [326 IAC 2-7-19]

C.18 Emission Statement [326 IAC 2-7-5(3)(C)(iii)] [326 IAC 2-7-5(7)] [326 IAC 2-7-19(c)] [326 IAC 2-6]

- (a) Pursuant to 326 IAC 2-6-3(b)(2), starting in 2005 and every three (3) years thereafter, the Permittee shall submit by July 1 an emission statement covering the previous calendar year. The emission statement shall contain, at a minimum, the information specified in 326 IAC 2-6-4(c) and shall meet the following requirements:
 - (1) Indicate estimated actual emissions of all pollutants listed in 326 IAC 2-6-4(a); and
 - (2) Indicate estimated actual emissions of regulated pollutants (as defined by 326 IAC 2-7-1(32) ("Regulated pollutant which is used only for purposes of Section 19 of this rule") from the source, for purposes of fee assessment.

The statement must be submitted to:

Indiana Department of Environmental Management
Technical Support and Modeling Section, Office of Air Quality
100 North Senate Avenue, P. O. Box 6015
Indianapolis, Indiana 46206-6015

The emission statement does require the certification by the "responsible official" as defined by 326 IAC 2-7-1(34).

- (b) The emission statement required by this permit shall be considered timely if the date postmarked on the envelope or certified mail receipt, or affixed by the shipper on the private shipping receipt, is on or before the date it is due. If the document is submitted by any other means, it shall be considered timely if received by IDEM, OAQ, on or before the date it is due.

C.19 General Record Keeping Requirements [326 IAC 2-7-5(3)] [326 IAC 2-7-6]

- (a) Records of all required monitoring data, reports and support information required by this permit shall be retained for a period of at least five (5) years from the date of monitoring sample, measurement, report, or application. These records shall be physically present or electronically accessible at the source location for a minimum of three (3) years. The records may be stored elsewhere for the remaining two (2) years as long as they are available upon request. If the Commissioner makes a request for records to the Permittee, the Permittee shall furnish the records to the Commissioner within a reasonable time.
- (b) Unless otherwise specified in this permit, all record keeping requirements not already legally required shall be implemented within ninety (90) days of permit issuance.

- (c) If there is a reasonable possibility that a “project” (as defined in 326 IAC 2-2-1 (qq) and/or 326 IAC 2-3-1 (ll)) at an existing emissions unit, other than projects at a Clean Unit, which is not part of a “major modification” (as defined in 326 IAC 2-2-1 (ee) and/or 326 IAC 2-3-1 (z)) may result in significant emissions increase and the Permittee elects to utilize the “projected actual emissions” (as defined in 326 IAC 2-2-1 (rr) and/or 326 IAC 2-3-1 (mm)), the Permittee shall comply with following:
- (1) Prior to commencing the construction of the “project” (as defined in 326 IAC 2-2-1 (qq) and/or 326 IAC 2-3-1 (ll)) at an existing emissions unit, document and maintain the following records:
 - (A) A description of the project.
 - (B) Identification of any emissions unit whose emissions of a regulated new source review pollutant could be affected by the project.
 - (C) A description of the applicability test used to determine that the project is not a major modification for any regulated NSR pollutant, including:
 - (i) Baseline actual emissions;
 - (ii) Projected actual emissions;
 - (iii) Amount of emissions excluded under section 326 IAC 2-2-1(rr)(2)(A)(iii) and/or 326 IAC 2-3-1(mm)(2)(A)(3); and
 - (iv) An explanation for why the amount was excluded, and any netting calculations, if applicable.
 - (2) Monitor the emissions of any regulated NSR pollutant that could increase as a result of the project and that is emitted by any existing emissions unit identified in (1)(B) above; and
 - (3) Calculate and maintain a record of the annual emissions, in tons per year on a calendar year basis, for a period of five (5) years following resumption of regular operations after the change, or for a period of ten (10) years following resumption of regular operations after the change if the project increases the design capacity of or the potential to emit that regulated NSR pollutant at the emissions unit.

C.20 General Reporting Requirements [326 IAC 2-7-5(3)(C)] [326 IAC 2-1.1-11]

- (a) The Permittee shall submit the attached Quarterly Deviation and Compliance Monitoring Report or its equivalent. Any deviation from permit requirements, the date(s) of each deviation, the cause of the deviation, and the response steps taken must be reported. This report shall be submitted within thirty (30) days of the end of the reporting period. The Quarterly Deviation and Compliance Monitoring Report shall include the certification by the “responsible official” as defined by 326 IAC 2-7-1(34).
- (b) The report required in (a) of this condition and reports required by conditions in Section D of this permit shall be submitted to:

Indiana Department of Environmental Management
Compliance Data Section, Office of Air Quality
100 North Senate Avenue, P. O. Box 6015
Indianapolis, Indiana 46206-6015
- (c) Unless otherwise specified in this permit, any notice, report, or other submission required by this permit shall be considered timely if the date postmarked on the envelope or certified mail receipt, or affixed by the shipper on the private shipping receipt, is on or before the date it is due. If the document is submitted by any other means, it shall be considered timely if received by IDEM, OAQ, on or before the date it is due.
- (d) Unless otherwise specified in this permit, all reports required in Section D of this permit

shall be submitted within thirty (30) days of the end of the reporting period. All reports do require the certification by the "responsible official" as defined by 326 IAC 2-7-1(34).

- (e) The first report shall cover the period commencing on the date of issuance of this permit and ending on the last day of the reporting period. Reporting periods are based on calendar years.

Stratospheric Ozone Protection

C.21 Compliance with 40 CFR 82 and 326 IAC 22-1

Pursuant to 40 CFR 82 (Protection of Stratospheric Ozone), Subpart F, except as provided for motor vehicle air conditioners in Subpart B, the Permittee shall comply with the standards for recycling and emissions reduction:

- (a) Persons opening appliances for maintenance, service, repair, or disposal must comply with the required practices pursuant to 40 CFR 82.156.
- (b) Equipment used during the maintenance, service, repair, or disposal of appliances must comply with the standards for recycling and recovery equipment pursuant to 40 CFR 82.158.
- (c) Persons performing maintenance, service, repair, or disposal of appliances must be certified by an approved technician certification program pursuant to 40 CFR 82.161.

SECTION D.1

FACILITY OPERATION CONDITIONS

Facility Description [326 IAC 2-7-5(15)]:

NOTE: All capacities are considered confidential by the source and are included in a confidential OAQ file.

A-PLANT (EXISTING)

- (a) Truck receiving operations, constructed in 1996, consisting of the following units, using the truck receiving/storage baghouse for control, and exhausting at stack Pt #1:
- (1) Two (2) truck dumps (#1 & #2);
 - (2) Two (2) truck receiving conveyors (#1 & #2);
 - (3) Two (2) receiving legs (#1 & #2), using the truck receiving/storage baghouse and oil applications;
 - (4) One (1) screen;
 - (5) Two (2) receiving legs (#1 & #2) extending from the screen;
 - (6) Two (2) screening conveyors;
 - (7) One (1) screening leg;
 - (8) One (1) screening leg;
 - (9) Two (2) conveyors (#1 & #2) extending to storage silos and to bulk storage;
 - (10) Two (2) conveyors extending to bulk storage feeding and continuing to the bulk storage silos;
 - (11) Ten (10) silos;
 - (12) One (1) screening bin;
 - (13) Two (2) bulk storage bins;
 - (14) One (1) screening conveyor extending from the screening silo;
 - (15) One (1) screening storage conveyor;
 - (16) Two (2) totally enclosed screenings transfer conveyors arranged in a series, transferring screenings from the screenings storage conveyors to the screening bucket elevator;
 - (17) One (1) screening bucket elevator, transferring screenings from the screenings transfer conveyors to the screenings surge bin;
 - (18) Two (2) bulk storage return conveyors (#1 & #2) arranged in a series;

(The information describing the process contained in this facility description box is descriptive information and does not constitute enforceable conditions.)

SECTION D.1

FACILITY OPERATION CONDITIONS (Continued)

Facility Description [326 IAC 2-7-5(15)]:

- (19) Two (2) conveyors from storage (#1 & #2);
- (20) One (1) conveyor extending to the surge bin leg; and
- (21) One (1) truck receiving/storage baghouse conveyor which transfers dust from the baghouse back to the truck receiving/storage baghouse;
- (b) Rail receiving operations, constructed in 1996, consisting of the following units, using the rail receiving baghouse for control, and exhausting at stack Pt #2:
 - (1) One (1) rail car dump; and
 - (2) One (1) rail car receiving conveyor;
- (c) Grain screening operations, constructed in 1996, consisting of the following units, using the screenings baghouse, and exhausting at stack Pt #5:
 - (1) One (1) screening surge bin;
 - (2) One (1) conveyor extending to the de-stoner;
 - (3) One (1) de-stoner, using a cyclone and the screening baghouse for control;
 - (4) One (1) screening grinder;
 - (5) Four (4) totally enclosed conveyors in a series, extending to the hull refining screener;
 - (6) One (1) cyclone exhausting to the screening baghouse;
 - (7) One (1) surge bin elevator;
 - (8) One (1) whole bean surge bin;
 - (9) One (1) dryer feed elevator;
 - (10) One (1) totally enclosed dryer feed conveyor, transferring beans to the dryer feed elevator;
 - (11) Two (2) whole bean aspirators, in parallel;
 - (12) One (1) dryer discharge conveyor;
 - (13) One (1) day bin elevator;

(The information describing the process contained in this facility description box is descriptive information and does not constitute enforceable conditions.)

SECTION D.1 FACILITY OPERATION CONDITIONS (Continued)

Facility Description [326 IAC 2-7-5(15)]:

- (14) Two (2) day bins;
 - (15) Two (2) totally enclosed conveyors, arranged in a series;
 - (16) Two (2) conveyors extending from the dryer to the dryer discharge conveyor;
 - (17) One (1) milling elevator;
 - (18) One (1) product meal conveyor, identified as #1;
 - (19) One (1) meal surge conveyor, identified as #2;
 - (20) Three (3) meal storage silos;
 - (21) One (1) load out leg conveyor;
 - (22) One (1) load out meal elevator; and
 - (23) One (1) meal transfer conveyor;
- (d) One (1) column dryer, constructed in 1996, exhausting at stack Pt #3;

(The information describing the process contained in this facility description box is descriptive information and does not constitute enforceable conditions.)

Emission Limitations and Standards [326 IAC 2-7-5(1)]

D.1.1 General Provisions Relating to NSPS [326 IAC 12-1] [40 CFR Part 60, Subpart A]

The provisions of 40 CFR Part 60, Subpart A - General Provisions, which are incorporated by reference in 326 IAC 12-1, apply to the units described in Condition D.1.2 except when otherwise specified in 40 CFR Part 60, Subpart DD.

D.1.2 New Source Performance Standards(NSPS) Grain Elevators [326 IAC 12] [40 CFR Part 60, Subpart DD]

Pursuant to 40 CFR Part 60, Subpart DD (Standards of Performance for Grain Elevators), the PM emissions from the truck receiving/storage baghouse, rail receiving baghouse, and screenings baghouse which exhaust through Pt #1, #2, and #5, respectively, shall not exceed 0.01 gr/dscf and the gasses discharged shall not exceed 0 percent opacity. Additionally, fugitive emissions from the truck unloading station and rail car unloading station shall not exceed 5 percent opacity while fugitive emissions from the grain handling station shall not exceed 0 percent opacity.

D.1.3 PSD Minor Limit [326 IAC 2-2]

- (a) Pursuant to CP145-4300-00035, issued July 17, 1995, the soybean processed shall be limited to less than 803,000 tons per twelve (12) consecutive month period with compliance determined at the end of each month. Thus, PM and PM10 emissions are prevented from being greater than 250 tons per year and 326 IAC 2-2 (Prevention of Significant Deterioration) and 40 CFR 52.2 are not applicable. This is the same limit as in Conditions D.2.1(a) and D.3.2(a).
- (b) Pursuant to CP145-4300-00035, issued July 17, 1995, the Permittee shall be limited to the following PM emissions:

Process	Baghouse/ Cyclone	Air Flow Rate (acfm)	Grain Loading (gr/dscf)	PM Limit (lb/hr)
Grain receiving system, whole bean transfer, receiving and screening system	Pt #1	50,000	0.005	2.14
Rail unloading	Pt #2	3,300	0.005	0.141
Screening baghouse	Pt #5	35,500	0.005	1.52

D.1.4 Particulate Emissions Limitations [326 IAC 6-3-2]

Pursuant to 326 IAC 6-3-2, the particulate emissions from the column dryer shall not exceed the pound per hour emission rate calculated using the following equation:

Interpolation and extrapolation of the data for the process weight rate in excess of thirty (30) tons per hour shall be accomplished by use of the equation:

$$E = 55.0 P^{0.11} - 40$$

where E = rate of emission in pounds per hour and
 P = process weight rate in tons per hour

The individual limitation is included in a IDEM, OAQ confidential file because the process weight rate is considered confidential by the source.

D.1.5 Preventive Maintenance Plan [326 IAC 2-7-5(13)]

A Preventive Maintenance Plan, in accordance with Section B - Preventive Maintenance Plan, of this permit, is required for the applicable facilities and associated control devices.

Compliance Determination Requirements

D.1.6 Particulate

Pursuant to CP-145-4300-00035, issued July 17, 1995 and in order to demonstrate compliance with Conditions D.1.2, D.1.3, and D.1.4, the following requirements apply:

- (a) The baghouses for truck receiving/storage, rail car receiving/storage, and screening shall be in operation at all times those facilities are in operation.
- (b) Dust control oil shall be applied at the starting end of the truck and rail car receiving conveyors at all times these conveyors are in operation, at a rate determined at the time of PM compliance tests performed as required by CP-145-4300-00035.
- (c) Fugitive emissions shall be controlled by keeping paved roads free of particulate matter with a vacuum or wet sweeper.

Compliance Monitoring Requirements [326 IAC 2-7-6(1)] [326 IAC 2-7-5(1)]

D.1.7 Visible Emissions Notations

- (a) Once per shift visible emission notations of Pt #3 stack exhaust shall be performed during normal daylight operations when exhausting to the atmosphere. A trained employee shall record whether emissions are normal or abnormal.
- (b) Once per day visible emission notations of Pt #1, Pt #2, and Pt #5 stack exhaust shall be performed during normal daylight operations when exhausting to the atmosphere. A trained employee shall record whether emissions are normal or abnormal.

- (c) For processes operated continuously, "normal" means those conditions prevailing, or expected to prevail, eighty percent (80%) of the time the process is in operation, not counting startup or shut down time.
- (d) In the case of batch or discontinuous operations, readings shall be taken during that part of the operation that would normally be expected to cause the greatest emissions.
- (e) A trained employee is an employee who has worked at the plant at least one (1) month and has been trained in the appearance and characteristics of normal visible emissions for that specific process.
- (f) The Compliance Response Plan for this unit shall contain troubleshooting contingency and response steps for when an abnormal emission is observed. Failure to take response steps in accordance with Section C - Compliance Response Plan - Preparation, Implementation, Records, and Reports, shall be considered a deviation from this permit.

D.1.8 Parametric Monitoring

- (a) The Permittee shall record the total static pressure drop across the baghouses used in conjunction with the truck receiving (Pt #1), rail receiving (Pt #2), rail screening processes (Pt #2) and grain screening (Pt #5) processes, at least once per day when the listed processes are in operation. When for any one reading, the pressure drop across the baghouses is outside the normal range of 0.5 to 8.0 inches of water or a range established during the latest stack test, the Permittee shall take reasonable response steps in accordance with Section C - Compliance Response Plan - Preparation, Implementation, Records, and Reports. A pressure reading that is outside the above mentioned range is not a deviation from this permit. Failure to take response steps in accordance with Section C - Compliance Response Plan - Preparation, Implementation, Records, and Reports, shall be considered a deviation from this permit.
- (b) The instrument used for determining the pressure shall comply with Section C - Pressure Gauge and Other Instrument Specifications, of this permit, shall be subject to approval by IDEM, OAQ, and shall be calibrated at least once every six (6) months or at a frequency recommended by the manufacturer.

D.1.9 Baghouse Inspections

- (a) An external inspection of all bags controlling particulate emissions from the truck receiving (PT#1), rail receiving, (Pt #2), and grain screening (Pt #5) processes shall be performed at least once per calendar quarter.

An internal inspection of all bags controlling particulate emissions from the truck receiving (Pt #1), rail receiving (Pt #2) and grain screening (Pt #5) processes shall be performed at least once per calendar year.

Inspections required by this condition shall not be performed in consecutive months. All defective bags shall be replaced.
- (b) Inspections shall also be performed whenever the respective baghouse is out of service for more than 24 consecutive hours. All defective bags shall be replaced.

D.1.10 Broken or Failed Bag Detection

In the event that bag failure has been observed:

- (a) For multi-compartment units, the affected compartments will be shut down immediately until the failed units have been repaired or replaced. Within eight (8) business hours of the determination of failure, response steps according to the timetable described in the Compliance Response Plan shall be initiated. For any failure with corresponding

response steps and timetable not described in the Compliance Response Plan, response steps shall be devised within eight (8) business hours of discovery of the failure and shall include a timetable for completion. Failure to take response steps in accordance with Section C - Compliance Response Plan - Preparation, Implementation, Records, and Reports, shall be considered a deviation from this permit. If operations continue after bag failure is observed and it will be ten (10) days or more after the failure is observed before the failed units will be repaired or replaced, the Permittee shall promptly notify the IDEM, OAQ of the expected date the failed units will be repaired or replaced. The notification shall also include the status of the applicable compliance monitoring parameters with respect to normal, and the results of any response actions taken up to the time of notification.

- (b) For single compartment baghouses, failed units and the associated process will be shut down immediately until the failed units have been repaired or replaced. Operations may continue only if the event qualifies as an emergency and the Permittee satisfies the requirements of the emergency provisions of this permit (Section B - Emergency Provisions).

Record Keeping and Reporting Requirement [326 IAC 2-7-5(3)] [326 IAC 2-7-19]

D.1.11 Record Keeping Requirements

- (a) To document compliance with Condition D.1.3(a), the Permittee shall maintain records of the quantity of soybeans processed.
- (b) To document compliance with Condition D.1.7, the Permittee shall maintain records of once per shift visible emission notations of the stack exhaust from Pt #3.
- (c) To document compliance with Condition D.1.7, the Permittee shall maintain records of once per day visible emission notations of the stack exhaust from Pt #1, Pt #2, and Pt #5.
- (d) To document compliance with Condition D.1.8, the Permittee shall maintain records of the total pressure drop across the baghouses.
- (e) To document compliance with Condition D.1.9, the Permittee shall maintain records of the results of the inspections required under Condition D.1.9.
- (f) To document compliance with Condition D.1.5, the Permittee shall maintain records of any additional inspections prescribed by the Preventive Maintenance Plan.
- (g) All records shall be maintained in accordance with Section C - General Record Keeping Requirements, of this permit.

D.1.12 Reporting Requirements

A quarterly summary of the information to document compliance with Condition D.1.3(a) shall be submitted to the address listed in Section C - General Reporting Requirements, of this permit, using the reporting forms located at the end of this permit, or their equivalent, within thirty (30) days after the end of the quarter being reported. The report submitted by the Permittee does require the certification by the "responsible official" as defined by 326 IAC 2-7-1(34). This is the same report as required in Conditions D.2.13 and D.3.20(a).

SECTION D.2

FACILITY OPERATION CONDITIONS

Facility Description [326 IAC 2-7-5(15)]:

- (e) Milling operations, constructed in 1996, consisting of the following units, using the RF filter baghouse for control, and exhausting at stack Pt #4:
 - (1) One (1) soy bean scale with upper and lower scale garners;
 - (2) Six (6) cracking rolls with primary dehulling aspirators, using the primary aspiration cyclone and RF filter baghouse for control;
 - (3) Three (3) conveyors extending from the primary dehulling aspirators, with a maximum combined capacity of 100 tons per hour;
 - (4) Three (3) surge bins;
 - (5) Three (3) cracked bean conditioners;
 - (6) Three (3) conveyors extending from the cracked bean conditioners;
 - (7) Three (3) impactors with secondary dehulling aspirators, using the secondary aspiration cyclones and RF filter baghouse for control;
 - (8) One (1) primary aspiration cyclone;
 - (9) One (1) secondary aspiration cyclone;
 - (10) Two (2) hull refining screeners, exhausting to the hull refining cyclone;
 - (11) Four (4) hull refining aspirators, exhausting to the hull refining cyclone;
 - (12) One (1) hull refining cyclone;
 - (13) Two (2) millfeed grinders;
 - (14) Three (3) surge bins;
 - (15) One (1) meal screen;
 - (16) Two (2) hammer mills;
 - (17) Two (2) totally enclosed sized meal conveyors, in a series; and
 - (18) One (1) millfeed weight belt;

(The information describing the process contained in this facility description box is descriptive information and does not constitute enforceable conditions.)

SECTION D.2

FACILITY OPERATION CONDITIONS (Continued)

Facility Description [326 IAC 2-7-5(15)]:

- (f) Flaking mill operations, constructed in 1996, consisting of the following units, using the flaker aspiration baghouse, and exhausting at stack Pt #6:
 - (1) Nine (9) flakers; and
 - (2) One (1) flake collecting conveyor;
- (g) One (1) flow coating material bin, using the flow coat receiving baghouse for control, and exhausting at stack Pt #11;
- (h) Truck meal loadout operations, constructed in 1996, consisting of the following units, using the truck meal loadout baghouse, and exhausting at stack Pt #12:
 - (1) One (1) mixer, extending from the hull grinders;
 - (2) One (1) millfeed elevator leg;
 - (3) One (1) totally enclosed millfeed conveyor;
 - (4) Three (3) millfeed bins;
 - (5) One (1) millfeed weigh belt;
 - (6) One (1) meal conveyor extending from the coolers;
 - (7) One (1) DTDC unground meal conveyor extending to another set of conveyors;
 - (8) One (1) unground meal conveyor;
 - (9) One (1) feeder;
 - (10) One (1) flow coating material screw;
 - (11) One (1) mixing screw conveyor;
 - (12) One (1) production meal elevator;
 - (13) One (1) product meal conveyor #2;
 - (14) Six (6) meal storage bins;
 - (15) One (1) truck load out conveyor;
 - (16) One (1) truck loader; and
 - (17) One (1) truck scale;

(The information describing the process contained in this facility description box is descriptive information and does not constitute enforceable conditions.)

SECTION D.2 FACILITY OPERATION CONDITIONS (Continued)

Facility Description [326 IAC 2-7-5(15)]:

- (i) Rail meal loadout operations, constructed in 1996, consisting of the following units, using the rail meal loadout baghouse, and exhausting at stack Pt #13:
 - (1) a rail load out conveyor;
 - (2) One (1) rail scale; and
 - (3) One (1) rail loader.

(The information describing the process contained in this facility description box is descriptive information and does not constitute enforceable conditions.)

Emission Limitations and Standards [326 IAC 2-7-5(1)]

D.2.1 PSD Minor Limit [326 IAC 2-2] [40 CFR 52.21]

- (a) Pursuant to CP145-4300-00035, issued July 17, 1995, the soybean processed shall be limited to less than 803,000 tons per twelve (12) consecutive month period with compliance determined at the end of each month. Thus, PM and PM10 emissions are prevented from being greater than 250 tons per year and 326 IAC 2-2 (Prevention of Significant Deterioration) and 40 CFR 52.2 are not applicable. This is the same limit as in Conditions D.1.3(a) and D.3.2(a).
- (b) The Permittee shall also be limited to the following:

Process	Baghouse/ Cyclone	Air Flow Rate (acfm)	Grain Loading (gr/dscf)	PM Limit (lb/hr)
Milling operations	Pt #4	25,400	0.006	1.3
Flaking mill operations	Pt #6	9,600	0.005	0.41
Flow coating bin	Pt #11	600	0.005	0.026
Truck meal loadout operations	Pt #12	38,500	0.005	1.65
Rail meal loadout operations	Pt #13	2,000	0.006	0.10

D.2.2 Opacity

Pursuant to CP-A145-9458-00035, issued on June 9, 1998, visible emissions from the flow coat receiving baghouse and rail meal loadout baghouse shall not exceed 5% opacity.

D.2.3 Particulate Emissions Limitations [326 IAC 6-3-2]

Pursuant to 326 IAC 6-3-2, the particulate emissions from the milling, flake mill, truck meal loadout, and rail meal loadout operations and the flow coat receiving operation shall not exceed the pound per hour emission rate calculated using the following equations:

Interpolation of the data for the process weight rate up to thirty (30) tons per hour shall be accomplished by use of the equation:

$$E = 4.10 P^{0.67} \quad \text{where } E = \text{rate of emission in pounds per hour and}$$

P = process weight rate in tons per hour
or depending on the process weight rate:

Interpolation and extrapolation of the data for the process weight rate in excess of thirty (30) tons per hour shall be accomplished by use of the equation:

$$E = 55.0 P^{0.11} - 40$$

where E = rate of emission in pounds per hour and
P = process weight rate in tons per hour

The individual limitations are included in a IDEM, OAQ confidential file because the process weight rates are considered confidential by the source.

D.2.4 Preventive Maintenance Plan [326 IAC 2-7-5(13)]

A Preventive Maintenance Plan, in accordance with Section B - Preventive Maintenance Plan, of this permit, is required for the applicable facilities and associated control devices.

Compliance Determination Requirements

D.2.5 Particulate

Pursuant to CP-145-4300-00035, issued July 17, 1995 and in order to demonstrate compliance with Conditions D.2.1, D.2.2, and D.2.3, the following conditions apply:

- (a) The RF filter, flakers aspiration, flow coating, truck meal loadout, and rail meal loadout baghouses shall be in operation at all times that their respective facilities are in operation.
- (b) The primary aspiration, secondary aspiration, and hull refining cyclones shall be in operation at all times that their respective facilities are in operation.
- (c) Fugitive emissions shall be controlled by keeping paved roads free of particulate matter with a vacuum or wet sweeper.

Compliance Monitoring Requirements [326 IAC 2-7-6(1)] [326 IAC 2-7-5(1)]

D.2.6 Visible Emissions Notations

- (a) Once per day visible emission notations of Pt. #4, 6, 11, 12, and 13 stack exhaust shall be performed during normal daylight operations when exhausting to the atmosphere. A trained employee shall record whether emissions are normal or abnormal.
- (b) Once per day visible emission notations of Pt. #4, 12, and 13 stack exhaust shall be performed during normal daylight operations when exhausting to the atmosphere. A trained employee shall record whether emissions are normal or abnormal.
- (c) For processes operated continuously, "normal" means those conditions prevailing, or expected to prevail, eighty percent (80%) of the time the process is in operation, not counting startup or shut down time.
- (d) In the case of batch or discontinuous operations, readings shall be taken during that part of the operation that would normally be expected to cause the greatest emissions.
- (e) A trained employee is an employee who has worked at the plant at least one (1) month and has been trained in the appearance and characteristics of normal visible emissions for that specific process.
- (f) The Compliance Response Plan for this unit shall contain troubleshooting contingency and response steps for when an abnormal emission is observed. Failure to take response steps in accordance with Section C - Compliance Response Plan - Preparation,

Implementation, Records, and Reports, shall be considered a deviation from this permit.

D.2.7 Parametric Monitoring

- (a) Alarms shall be operational on all cyclone high level indicators. If an alarm sounds, the Permittee shall take reasonable response steps. Failure to take response steps in accordance with Section C - Compliance Response Plan - Preparation, Implementation, Records, and Reports, shall be considered a deviation from this permit.
- (b) The Permittee shall record the total static pressure drop across the baghouses used in conjunction with the milling operations (Pt #4), flaking meal operations (Pt #6), flow coating material bin operations (Pt #11), truck meal loadout operations (Pt #12) and rail meal loadout operations (Pt #13), at least once per day when the listed processes are in operation. When for any one reading, the pressure drop across the baghouses is outside the normal range of 0.5 to 8.0 inches of water or a range established during the latest stack test, the Permittee shall take reasonable response steps in accordance with Section C - Compliance Response Plan - Preparation, Implementation, Records, and Reports. A pressure reading that is outside the above mentioned range is not a deviation from this permit. Failure to take response steps in accordance with Section C - Compliance Response Plan - Preparation, Implementation, Records, and Reports, shall be considered a deviation from this permit.
- (c) The instrument used for determining the pressure shall comply with Section C - Pressure Gauge and Other Instrument Specifications, of this permit, shall be subject to approval by IDEM, OAQ, and shall be calibrated at least once every six (6) months or at a frequency recommended by the manufacturer.

D.2.8 Baghouse Inspections

- (a) An external inspection of all bags controlling particulate emissions from the flaking mill operations (Pt #6) shall be performed at least once per calendar quarter.

An internal inspection of all bags controlling particulate emissions from the flaking mill operations (Pt #6) shall be performed at least once per calendar year.

Inspections required by this condition shall not be performed in consecutive months. All defective bags shall be replaced.
- (b) An inspection of all bags controlling particulate emissions from the milling (Pt #4), flow coating material bin (Pt #11), truck meal loadout (Pt #12) and rail meal loadout (Pt #13) operations shall be performed at least once per calendar year. Inspections required by this condition shall not be performed in consecutive months. All defective bags shall be replaced.
- (c) Inspections shall also be performed whenever the respective baghouse is out of service for more than 24 consecutive hours. All defective bags shall be replaced.

D.2.9 Broken or Failed Bag Detection

In the event that bag failure has been observed:

- (a) For multi-compartment units, the affected compartments will be shut down immediately until the failed units have been repaired or replaced. Within eight (8) business hours of the determination of failure, response steps according to the timetable described in the Compliance Response Plan shall be initiated. For any failure with corresponding response steps and timetable not described in the Compliance Response Plan, response steps shall be devised within eight (8) business hours of discovery of the failure and shall include a timetable for completion. Failure to take response steps in accordance with

Section C - Compliance Response Plan - Preparation, Implementation, Records, and Reports, shall be considered a deviation from this permit. If operations continue after bag failure is observed and it will be ten (10) days or more after the failure is observed before the failed units will be repaired or replaced, the Permittee shall promptly notify the IDEM, OAQ of the expected date the failed units will be repaired or replaced. The notification shall also include the status of the applicable compliance monitoring parameters with respect to normal, and the results of any response actions taken up to the time of notification.

- (b) For single compartment baghouses, failed units and the associated process will be shut down immediately until the failed units have been repaired or replaced. Operations may continue only if the event qualifies as an emergency and the Permittee satisfies the requirements of the emergency provisions of this permit (Section B - Emergency Provisions).

D.2.10 Cyclone Inspections

An inspection shall be performed once per year of all cyclones controlling the milling operations.

D.2.11 Cyclone Failure Detection

In the event that cyclone failure has been observed:

Failed units and the associated process will be shut down immediately until the failed units have been repaired or replaced. Operations may continue only if the event qualifies as an emergency and the Permittee satisfies the requirements of the emergency provisions of this permit (Section B - Emergency Provisions). Failure to take response steps in accordance with Section C - Compliance Response Plan - Preparation, Implementation, Records, and Reports, shall be considered a deviation from this permit.

Record Keeping and Reporting Requirement [326 IAC 2-7-5(3)] [326 IAC 2-7-19]

D.2.12 Record Keeping Requirements

- (a) To document compliance with Condition D.2.1(a), the Permittee shall maintain records of the quantity of soybeans processed.
- (b) To document compliance with Condition D.2.6, the Permittee shall maintain records of once per day visible emission notations of the stack exhaust from Pt #4, Pt. #6, Pt #11, Pt #12, and Pt #13.
- (c) To document compliance with Condition D.2.7, the Permittee shall maintain records of the total pressure drops across the baghouses. The Permittee shall also maintain records of any alarms that sound and the response steps taken.
- (d) To document compliance with Conditions D.2.8 and D.2.10, the Permittee shall maintain records of the results of the inspections required under Conditions D.2.8 and D.2.10.
- (e) To document compliance with Condition D.2.4, the Permittee shall maintain records of any additional inspections prescribed by the Preventive Maintenance Plan.
- (f) All records shall be maintained in accordance with Section C - General Record Keeping Requirements, of this permit.

D.2.13 Reporting Requirements

A quarterly summary of the information to document compliance with Condition D.2.1(a) shall be submitted to the address listed in Section C - General Reporting Requirements, of this permit, using the reporting forms located at the end of this permit, or their equivalent, within thirty (30) days after the end of the quarter being reported. The report submitted by the Permittee does require the certification by the "responsible official" as defined by 326 IAC 2-7-1(34). This is the same report as required in Conditions D.1.12 and D.3.20(a).

SECTION D.3

FACILITY OPERATION CONDITIONS

Facility Description [326 IAC 2-7-5(15)]:

- (j) Oil extraction and processing operations, constructed in 1996, consisting of the following units:
 - (1) One (1) soybean oil extractor, using a mineral oil absorber for control, and exhausting at stack Pt #9;
 - (2) One (1) set of evaporators, using a mineral oil absorber for control, and exhausting at stack Pt #9;
 - (3) One (1) desolventizer/toaster, using a mineral oil absorber for control, and exhausting at stack Pt #9;
 - (4) One (1) set of condensers and water separators to separate hexane and water, using a mineral oil absorber for control, and exhausting at stack Pt #9;
 - (5) Two (2) mineral oil absorbers, using a mineral oil absorber for control, and exhausting at stack Pt #9;
 - (6) One (1) spent flake conveyor extending to the meal dryer;
 - (7) One (1) totally enclosed seal screw conveyor, installed in a series with the slurry loader conveyor;
 - (8) One (1) flake conveyor extending to the slurry loader conveyor;
 - (9) One (1) slurry loader conveyor;
 - (10) One (1) hexane storage tank, identified as #1 (storage);
 - (11) One (1) hexane storage tank, identified as #2 (process tank);
 - (12) One (1) hexane storage tank, identified as #3 (work/separation);
- (k) Two (2) DTDC meal dryers (#1 & #2), both constructed in 1996, using a cyclone for control and exhausting at stack Pt #7;
- (l) One (1) cyclone for the control of the meal dryers, constructed in 1996, and exhausting at stack Pt #7;
- (m) Two (2) DTDC meal coolers (#1 & #2), both constructed in 1996, using a cyclone for control, and exhausting at stack Pt #8;
- (n) One (1) cyclone for the control of the meal coolers, constructed in 1996, and exhausting at stack Pt #8;

(The information describing the process contained in this facility description box is descriptive information and does not constitute enforceable conditions.)

Emission Limitations and Standards [326 IAC 2-7-5(1)]

D.3.1 Volatile Organic Compounds (VOC) [326 IAC 8-1-6]

326 IAC 8-1-6 (New Facilities; General Reduction Requirements) applies to the soy bean extractor processes, meal dryers, and coolers. Pursuant to CP145-4300-00035, issued July 17, 1995, and 326 IAC 8-1-6, the following is BACT and these limitations apply:

Facility	Control	VOC (Hexane) Emission Limit (including upset emissions)
Oil Extractor, Meal Desolventizer, Oil Desolventizer, Solvent Separator, Vent System	Mineral oil absorber	0.12 lb/ton of processed grain
Meal Dryers	None	0.16 lb/ton of processed grain
Meal Coolers	None	0.16 lb/ton of processed grain
Maximum soybean extraction process throughput = 803,000 tons per twelve (12) consecutive month period		

The total amount of hexane used by the source shall not exceed 1.2 pounds of hexane per ton of beans processed. This limit is based on information from the Technical Support Document for CP 145-4300-00035, issued on July 17, 1995 and is equivalent to 481.8 tons of hexane per twelve (12) consecutive month period. Compliance with this limit is equivalent to VOC emissions of less than 176.7 tons per year. Compliance with this hexane usage limit, in addition to the limits listed in the table above, will satisfy the requirements of 326 IAC 8-1-6 (BACT). In order to comply with these limits, the absorber shall operate at all times that the oil extractor process is in operation.

D.3.2 PSD Minor Limit [326 IAC 2-2][40 CFR 52.21]

(a) Pursuant to CP145-4300-00035, issued July 17, 1995, the soybean processed shall be limited to less than 803,000 tons per twelve (12) consecutive month period with compliance determined at the end of each month. Thus, PM and PM10 emissions are prevented from being greater than 250 tons per year and 326 IAC 2-2 (Prevention of Significant Deterioration) and 40 CFR 52.2 are not applicable. This is the same limit as in Conditions D.1.3(a) and D.2.1(a).

(b) The Permittee shall also be limited to the following:

Process	Baghouse/ Cyclone	Air Flow Rate (acfm)	Grain Loading (gr/dscf)	PM Limit (lb/hr)
DTDC meal dryers, #1 and #2	Pt #7	22,000	0.02	3.8
DTDC meal coolers, #1 and #2	Pt #8	22,000	0.03	5.7

D.3.3 Particulate Emissions Limitations [326 IAC 6-3-2]

Pursuant to 326 IAC 6-3-2, the particulate emissions from the spent flake conveyor, seal screw conveyor, flake conveyor, slurry loader conveyor, DTDC meal dryers (#1 & #2), cyclone, DTDC meal coolers (#1 & #2), and cyclone shall not exceed the pound per hour emission rate calculated using the following equation:

Interpolation and extrapolation of the data for the process weight rate in excess of thirty (30) tons per hour shall be accomplished by use of the equation:

$$E = 55.0 P^{0.11} - 40$$

where E = rate of emission in pounds per hour and
 P = process weight rate in tons per hour

The individual limitations are included in a IDEM, OAQ confidential file because the process weight rates are considered confidential by the source.

D.3.4 Storage Tanks [326 IAC 12]

Pursuant to 326 IAC 12 as of July 1, 2000, there are no emission limitations or standards applicable to hexane storage tanks #1, #2, and #3, but there are applicable record keeping requirements listed in the Record Keeping portion of this Section.

D.3.5 General Provisions Relating to NESHAP [326 IAC 20-1] [40 CFR 63, Subpart A]

The provisions of 40 CFR 63, Subpart A - General Provisions, which are incorporated by reference in 326 IAC 20-1, apply to the oil extraction and processing operations except when otherwise specified in 40 CFR 63, Subpart GGGG.

D.3.6 Solvent Extraction for Vegetable Oil Production NESHAP [326 IAC 20] [40 CFR Part 63, Subpart GGGG]

Pursuant to 40 CFR Part 63, Subpart GGGG (National Emission Standards for Hazardous Air Pollutants: Solvent Extraction for Vegetable Oil Production), the HAP loss factor for the soybean conventional oilseed process is limited to 0.2 gallons of solvent per ton of soybean processed. Compliance with the HAP limit shall be demonstrated using the following equation found in 40 CFR 63.2840:

$$\text{Compliance Ratio} = \frac{\text{Actual HAP Loss}}{\text{Allowable HAP Loss}}$$

This equation can also be expressed as a function of total solvent loss as shown below and found in 40 CFR 63.2840:

$$\text{Compliance Ratio} = \frac{f * \text{Actual Solvent Loss}}{0.64 * \sum((\text{Oilseed})_i * (\text{SLF})_i)}$$

where f = The weighted average volume fraction of HAP in solvent received during the previous 12 operating months, as determined in 40 CFR 63.2854, dimensionless;

0.64 = The average volume fraction of HAP in solvent in the baseline performance data, dimensionless;

Actual Solvent Loss = Gallons of actual solvent loss during previous 12 operating months, as determined in 40 CFR 63.2853;

Oilseed = Tons of each oilseed type "i" processed during the previous 12 operating months, as shown in 40 CFR 63.2855; and

SLF = The corresponding solvent loss factor (gal/ton) for oilseed "i" as shown in Table 1 of 40 CFR 63.2840.

After 12 operating months, the source shall calculate the compliance ratio by the end of each calendar month following an operating month using the second equation. When calculating the compliance ratio, the following conditions shall be considered:

- (1) If the source processes any quantity of soybean in a calendar month and the source is not operating under an initial startup period or malfunction period subject to 40 CFR 63.2850, then the source shall categorize the month as an operating month, as defined in 40 CFR 63.2872.
- (2) The 12-month compliance ratio may include operating months occurring prior to a source shutdown and operating months that follow after the source resumes operation.

- (3) If the source shuts down and processes no soybean for an entire calendar month, then the source shall categorize the month as a nonoperating month, as defined in 40 CFR 63.2872. Exclude any nonoperating months from the compliance ratio determination.
- (4) If the source is subject to an initial startup period as defined in 40 CFR 60.2872, the source shall exclude from the compliance ratio determination any solvent and soybean information recorded for the initial startup period.
- (5) If the source is subject to a malfunction period as defined in 40 CFR 63.2872, the source shall exclude from the compliance ratio determination any solvent and soybean information recorded for the malfunction period.

If the compliance ratio is less than or equal to 1.00, the source is in compliance with the HAP emission requirement for the previous operating month.

The Permittee shall be in compliance with this rule no later than 3 years after the effective date of the rule, April 12, 2001 or the date as stated in 40 CFR 63.2860. Therefore the source shall be in compliance no later than April 12, 2004 or the date as stated in 40 CFR 63.2860.

D.3.7 Preventive Maintenance Plan [326 IAC 2-7-5(13)]

A Preventive Maintenance Plan, in accordance with Section B - Preventive Maintenance Plan, of this permit, is required for the affected facilities and associated control devices.

Compliance Determination Requirements

D.3.8 Testing Requirements [326 IAC 2-7-6(1),(6)] [326 IAC 2-1.1-11]

During the period between 30 and 36 months after issuance of this Part 70 permit, the Permittee shall perform VOC testing on the oil extraction system utilizing Methods 25 (40 CFR 60, Appendix A) for VOC or other methods as approved by the Commissioner. This test shall be repeated at least once every five years from the date of this valid compliance demonstration.

D.3.9 Particulate

Pursuant to CP-145-4300-00035, issued July 17, 1995 and in order to demonstrate compliance with Conditions D.3.2 and D.3.3. The cyclones for meal dryers and coolers shall operate at all times that those facilities are in operation.

D.3.10 Volatile Organic Compounds (VOC)

Pursuant to CP145-4300-00035, issued July 17, 1995, and in order to demonstrate compliance with Conditions D.3.1 and D.3.6, the mineral oil absorber shall operate at all times that the oil extractor process is in operation. The average mineral oil flow rate shall be determined at the time of the VOC (hexane) test.

D.3.11 VOC Compliance

Compliance with Condition D.3.1 shall be demonstrated per twelve (12) consecutive month period with compliance determined at the end of each month:

- (a) The amount of VOC (hexane) used per calendar month; and
- (b) The amount of soybean processed by the extraction process.

D.3.12 Compliance Requirements [326 IAC 20] [40 CFR Part 63, Subpart GGGG]

- (a) Pursuant to 40 CFR 63.2850, the source shall:
 - (1) Pursuant to 40 CFR 63.2860, the Permittee shall submit notification of compliance status no later than 60 days after determining your initial 12 operating months compliance ratio. For an existing source, such as this source, the

notification must be submitted no later than 51 calendar months after the effective date of this subpart, April 12, 2001.

- (2) Develop and implement a plan for demonstrating compliance in accordance with 40 CFR 63.2851.
 - (3) Develop a written startup, shutdown, and malfunction (SSM) plan in accordance with the provisions in 40 CFR 63.2852.
 - (4) Maintain all the necessary records used to demonstrate compliance with this subpart in accordance with 40 CFR 63.2862.
 - (5) Submit the following reports:
 - (A) Annual compliance certifications in accordance with 40 CFR 63.2861(a);
 - (B) Periodic SSM reports in accordance with 40 CFR 63.261(c); and
 - (C) Immediate SSM reports in accordance with 40 CFR 63.261(d).
 - (6) Submit all notifications and reports and maintain all records required by the General Provisions for performance testing on the control device that destroys solvent.
- (b) A malfunction as defined in 40 CFR 63.2 is a sudden, infrequent, and not reasonably preventable failure of air pollution control equipment or process equipment to function in a usual manner. If the existing source experiences an unscheduled shutdown as a result of a malfunction, continues to operate during a malfunction (including the period reasonable necessary to correct the malfunction), or starts up after a shutdown resulting from a malfunction, then the source must meet the requirements associated with one of two compliance options. Routine or scheduled process startups and shutdowns resulting from, but not limited to, market demands, maintenance activities, and switching types of oilseed processed, are not startups or shutdowns resulting from a malfunction and, therefore do not qualify for this provision. Within 15 days of the beginning date of the malfunction, the source must choose to comply with one of the following options listed:
- (1) Normal operation. The source must meet all of the requirements listed in 40 CFR 63.2850(a) and (b).
 - (2) Malfunction period. Throughout the malfunction period, the source must meet all of the requirements listed in 40 CFR 63.2850(a) and Table 1 of 40 CFR 63.2850 for sources operating during a malfunction period. At the end of the malfunction period, the source must then meet all of the requirements of Table 1 of 40 CFR 63.2850 for sources under normal operation.

D.3.13 Compliance Plan [326IAC 20] [40 CFR Part 63, Subpart GGGG]

- (a) Pursuant to 40 CFR 63.2851, the source must develop and implement a written plan for demonstrating compliance that provides the detailed procedures the source will follow to monitor and record data necessary for demonstrating compliance with this subpart. Procedures followed for quantifying solvent loss from the source and amount of oilseed processed vary from source to source because of site-specific factors such as equipment design characteristics and operating conditions. Typical procedures include one or more accurate measurement methods such as weigh scales, volumetric displacement, and material mass balance. Because the industry does not have a uniform set of procedures, the source must develop and implement a site-specific plan for demonstrating compliance before the compliance date for the source. The source shall keep the plan on-site and

readily available as long as the source is operational. If the owner makes any changes to the plan for demonstrating compliance, the previous versions of the plan must be kept and made readily available for inspection for at least 5 years after each revision. The plan for demonstrating compliance must include the following:

- (1) The name and address of the owner or operator;
 - (2) The physical address of the vegetable oil production process;
 - (3) A detailed description of all methods of measurement the source will use to determine solvent losses, HAP content of solvent, and the tons of each type of oilseed processed;
 - (4) When each measurement will be made;
 - (5) Examples of each calculation the source will use to determine compliance status. Include examples how to convert data measured with one parameter to the terms for use in compliance determination;
 - (6) Example logs of how data will be recorded; and
 - (7) A plan to ensure that the data continue to meet compliance demonstration needs.
- (b) IDEM, OAQ may require the source to revise the plan for demonstrating compliance. IDEM, OAQ may require reasonable revisions if the procedures lack detail, are inconsistent or do not accurately determine solvent loss, HAP content of the solvent, or the tons of soybean processed.

D.3.14 Startup, Shutdown, and Malfunction Plan [326 IAC 20][40 CFR Part 63, Subpart GGGG]

Pursuant to 40 CFR 63.2852, the source must develop a written SSM plan in accordance with 40 CFR 63.6(e)(3) and implement the plan, when applicable. The SSM plan must be completed before the compliance date for the source. The source must keep the SSM plan on-site and readily available as long as the source is operational. The SSM plan provides detailed procedures for operating and maintaining the source to minimize emissions during a qualifying SSM event for which the source chooses the 40 CFR 63.2580(e)(2) malfunction period, or the 40 CFR 63.2850(c)(2) or (d)(2) initial startup period. The SSM plan must specify a program of corrective action for malfunctioning process and air pollution control equipment and reflect the best practices now in use by the industry to minimize emissions. Some or all of the procedure may come from plans the source has developed for other purposes such as a Standard Operating Procedure manual or an Occupational Safety and Health Administration Process Safety Management plan. To qualify as a SSM plan, other such plans must meet all the applicable requirements of this NESHAP.

Compliance Monitoring Requirements [326 IAC 2-7-6(1)] [326 IAC 2-7-5(1)]

D.3.15 Visible Emissions Notations

- (a) Once per day visible emission notations of Pt. #7 and 8 stack exhaust shall be performed during normal daylight operations when exhausting to the atmosphere. A trained employee shall record whether emissions are normal or abnormal.
- (b) For processes operated continuously, "normal" means those conditions prevailing, or expected to prevail, eighty percent (80%) of the time the process is in operation, not counting startup or shut down time.
- (c) In the case of batch or discontinuous operations, readings shall be taken during that part of the operation that would normally be expected to cause the greatest emissions.

- (d) A trained employee is an employee who has worked at the plant at least one (1) month and has been trained in the appearance and characteristics of normal visible emissions for that specific process.
- (e) The Compliance Response Plan for this unit shall contain troubleshooting contingency and response steps for when an abnormal emission is observed. Failure to take response steps in accordance with Section C - Compliance Response Plan - Preparation, Implementation, Records, and Reports, shall be considered a deviation from this permit.

D.3.16 VOC Monitoring

In order to demonstrate compliance with Conditions D.3.1 and D.3.6, the following monitoring requirements apply:

- (a) The Permittee shall monitor and record the mineral oil flow rate at least once per day. The Preventive Maintenance Plan for the absorber shall contain troubleshooting contingency and corrective actions for when the flow rate readings are outside of the normal range for any one reading.
- (b) The instruments used for determining the flow rate shall be subject to approval by IDEM, OAQ, and shall be calibrated at least once per year.
- (c) The gauge employed to take the mineral oil flow across the scrubber shall have a scale such that the expected normal reading shall be no less than 20 percent of full scale and be accurate within + 10% of full scale reading. The instrument shall be quality assured and maintained as specified by the vendor.
- (d) In the event that the absorber's failure has been observed, an inspection will be conducted. Based upon the findings of the inspection, any corrective actions will be devised within eight (8) hours of discovery and will include a timetable for completion.
- (e) The operating temperatures of the mineral oil absorber shall be established in the Compliance Monitoring Plan. When the process is in operation, an electronic data management system (EDMS) shall record the instantaneous temperature on a frequency of not less than every two hours. As an alternate to installing an EDMS, manual readings shall be taken every two hours.
- (f) The mineral oil to the mineral-oil-stripping column shall be kept at a minimum temperature of 160°F or a temperature, as established in the Compliance Response Plan, for adequate stripping of the absorbed hexane from the oil. When the process is in operation, an electronic data management system (EDMS) shall record the instantaneous temperature on a frequency of not less than every two hours. As an alternate to installing an EDMS, manual readings shall be taken every two hours.

D.3.17 Cyclone Inspections

The Permittee shall monitor the high level indicators on all cyclones. An external inspection shall be performed each calendar quarter of all cyclones controlling the listed processes. An internal inspection shall be performed each calendar year of all cyclones controlling the listed processes.

D.3.18 Cyclone Failure Detection

In the event that cyclone failure has been observed:

Failed units and the associated process will be shut down immediately until the failed units have been repaired or replaced. Failure to take response steps in accordance with Section C - Compliance Response Plan - Preparation, Implementation, Records, and Reports, shall be considered a deviation from this permit. If operations continue after bag failure is observed and it

will be ten (10) days or more after the failure is observed before the failed units will be repaired or replaced, the Permittee shall promptly notify the IDEM, OAQ of the expected date the failed units will be repaired or replaced. The notification shall also include the status of the applicable compliance monitoring parameters with respect to normal, and the results of any response actions taken up to the time of notification.

Record Keeping and Reporting Requirements [326 IAC 2-7-5(3)] [326 IAC 2-7-19]

D.3.19 Record Keeping Requirements

- (a) To document compliance with Conditions D.3.1 and D.3.2(a), the Permittee shall maintain records of the quantity of soybeans processed and the amount of VOC (hexane) used per calendar month.
- (b) To document compliance with Condition D.3.4, the Permittee shall maintain a record showing the dimension of the storage vessel and an analysis showing the capacity of the storage vessel.
- (c) To document compliance with Conditions D.3.6, D.3.12, D.3.13, and D.3.14, and with 40 CFR Part 63, Subpart GGGG, the Permittee shall comply with the following:
 - (1) The following information must be kept on-site and readily available as long as the source is operational:
 - (A) Compliance Plan; and
 - (B) Startup, Shutdown, and Malfunction Plan.
 - (2) For the solvent inventory, the following information must be recorded in accordance with the source plan for demonstrating compliance:
 - (A) Dates that define each operating status period during a calendar month;
 - (B) The operating status of the source such as normal operation, nonoperating, initial startup period, malfunction period, or exempt operation for each recorded time interval;
 - (C) The gallons of extraction solvent in the inventory on the beginning and ending dates of each normal operating period;
 - (D) The gallons of all extraction solvent received, purchased, and recovered during each calendar month;
 - (E) All extraction solvent inventory adjustments, additions or subtractions. The owner must document the reason for the adjustment and justify the quantity of the adjustment;
 - (F) The total solvent loss for each calendar month, regardless of the source operating status; and
 - (G) The actual solvent loss in gallons for each operating month.
 - (3) For the weighted average volume fraction of HAP in the extraction solvent, the owner must record the following items:
 - (A) The gallons of extraction solvent received in each delivery;

- (B) The volume fraction of each HAP exceeding 1 percent by volume in each delivery of extraction solvent; and
 - (C) The weighted average volume fraction of HAP in extraction solvent received since the end of the last operating month as determined in accordance with 40 CFR 63.2854(b)(2).
- (4) Record the following items, in accordance with the source plan for demonstrating compliance:
- (A) The dates that define each operating period. The dates must be the same as the dates entered for the extraction solvent inventory.
 - (B) The operating status of the source such as normal operation, nonoperating, initial startup period, malfunction period, or exempt operation for each recorded time interval. On the log for each type of listed oilseed that is being processed during a normal operating period, the owner shall record which type of listed oilseed is being processed in addition to the source operating status.
 - (C) The soybean inventory for the soybean being processed on the beginning and ending dates of each normal operating period.
 - (D) The tons of soybean received at the affected source each normal operating period.
 - (E) All soybean inventory adjustments, additions, or subtractions for normal operating periods. The owner must document the reason for adjustment and justify the quantity of the adjustment.
 - (F) The tons of soybean processed during each operating month.
- (5) After the source has processed soybean for 12 operating months, and is not operating during an initial startup period as described in 40 CFR 63.2850(c)(2) or (d)(2), or a malfunction period as described in 40 CFR 63.2850(e)(2), the following items must be recorded by the end of the calendar month following each operating month:
- (A) The 12 operating months rolling sum of the actual solvent loss in gallons as described in 40 CFR 63.2853(c).
 - (B) The weighted average volume fraction of HAP in extraction solvent received for the previous 12 operating months as described in 40 CFR 63.2854(b)(3).
 - (C) The 12 operating months rolling sum of soybean processes at the affected source in tons as described in 40 CFR 63.2855(c).
 - (D) A determination of the compliance ratio. Using the values from 40 CFR 63.2853, 63.2854, 63.2855 and Table 1 of 40 CFR 63.2840, calculate the compliance ratio using equation 2 of 40 CFR 63.2840.
 - (E) A statement of whether the source is in compliance with all of the requirements of the subpart. This includes a determination of whether the source has met all of the applicable requirements of 40 CFR 63.2850.

- (6) For each SSM event subject to an initial startup period as described in 40 CFR 63.2850(c)(2) or (d)(2), or a malfunction period as described in 40 CFR 63.2850(e)(2), the following items shall be recorded by the end of the calendar month following each month in which the initial startup period or malfunction period occurred:
 - (A) A description and date of the SSM event, its duration, and reason it qualifies as an initial startup or malfunction;
 - (B) An estimate of the solvent loss in gallons for the duration of the initial startup or malfunction period with supporting documentation; and
 - (C) A checklist or other mechanism to indicate whether the SSM plan was followed during the initial startup or malfunction period.
- (d) To document compliance with Condition D.3.15, the Permittee shall maintain records of visible emission notations of the stack exhaust once per shift.
- (e) To document compliance with Condition D.3.17, the Permittee shall maintain records of the following:
 - (1) The mineral oil flow rate;
 - (2) The operating temperature of the mineral oil absorber; and
 - (3) The temperature of the stripping column.
- (f) To document compliance with Condition D.3.17, the Permittee shall maintain records of the results of the inspections required under Condition D.3.18.
- (a) To document compliance with Condition D.3.7, the Permittee shall maintain records of any additional inspections prescribed by the Preventive Maintenance Plan.
- (h) All records shall be maintained in accordance with Section C - General Record Keeping Requirements, of this permit.

D.3.20 Reporting Requirements

- (a) A quarterly summary of the information to document compliance with Conditions D.3.1 and D.3.2(a) shall be submitted to the address listed in Section C - General Reporting Requirements, of this permit, using the reporting forms located at the end of this permit, or their equivalent, within thirty (30) days after the end of the quarter being reported. The report submitted by the Permittee does require the certification by the "responsible official" as defined by 326 IAC 2-7-1(34). This is the same report as required in Conditions D.1.12 and D.2.13.
- (b) To document compliance with 40 CFR Part 63, Subpart GGGG, the Permittee must submit annual compliance certifications. The first annual compliance certification is due no later than 60 days after determining the initial 12 operating months compliance ratio. For an existing source, such as this source, the notification must be submitted no later than 50 calendar months after the effective date of this subpart, April 12, 2001 or the date as stated in 40 CFR 63.2860. Each subsequent annual compliance certification is due 12 months after the previous annual compliance certification. The annual compliance certification provides the compliance status for each operating month during the 12 calendar months period ending 60 days prior to the date on which the report is due. The annual certification shall include the following information:

- (1) The name and address of the owner or operator.
 - (2) The physical address of the vegetable oil production process.
 - (3) Each listed oilseed type processed during the 12 calendar months period covered by the report.
 - (4) Each HAP identified under 40 CFR 63.2854(a) as being present in concentrations greater than 1 percent by volume in each delivery of solvent received during the 12 calendar months period covered by the report.
 - (5) A statement designating the source as major source of HAP.
 - (6) A compliance certification to indicate whether the source was in compliance for each compliance determination made during the 12 calendar period covered by the report. For each such compliance determination, the source must include a certification of the following items:
 - (A) The source is following the procedures described in the plan for demonstrating compliance.
 - (B) The compliance ratio is less than or equal to 1.00.
- (c) To document compliance with 40 CFR Part 63, Subpart GGGG, the Permittee shall submit a deviation notification report for each compliance determination made in which the ratio exceeded 1.00 as determined under 40 CFR 63.2840(c). The report shall be submitted by the end of each month following the calendar month in which the deviation was determined. The deviation notification shall include the following:
- (1) The name and address of the owner or operator.
 - (2) The physical address of the vegetable oil production process.
 - (3) Each listed oilseed type processed during the 12 calendar months period for which a deviation was determined.
 - (4) The compliance ratio comprising the deviation. The owner may reduce the frequency of submittal of the deviation notification report if the IDEM, OAQ does not object as provided in 40 CFR 63.10(e)(3)(iii).
- (d) To document compliance with 40 CFR Part 63, Subpart GGGG, if the Permittee chooses to operate the source under an initial startup period subject to 40 CFR 63.2850(c)(2) or (d)(2) or a malfunction period subject to 40 CFR 63.2850(e)(2), the Permittee shall submit a periodic SSM report by the end of the calendar month following each month in which the initial startup period or malfunction period occurred. The periodic SSM report shall include the following:
- (1) The name, title, and signature of the source's responsible official who is certifying that the report accurately states all actions taken during the initial startup or malfunction period were consistent with the SSM plan.
 - (2) A description of the events occurring during the time period, the date and duration of the events, and the reason the time interval qualifies as an initial startup period or malfunction period.
 - (3) An estimate of the solvent loss during the initial startup or malfunction period with supporting documentation.

- (e) To document compliance with 40 CFR Part 63, Subpart GGGG, if the Permittee handles a SSM during an initial startup period subject to 40 CFR 63.2850(c)(2) or (d)(2) or a malfunction period subject to 40 CFR 63.2850(e)(2) differently from procedures in the SSM plan, then the Permittee shall submit an immediate SSM report. Immediate SSM reports consist of a telephone call or facsimile transmission to the responsible agency within 2 working days after starting actions inconsistent with the SSM plan, followed by a letter within 7 working days after the end of the event. The letter shall include the following:
- (1) The name, title, and signature of the source's responsible official who is certifying that the accuracy of the report, an explanation of the event, and the reasons for not following the SSM plan.
 - (2) A description and date of the SSM event, its duration, and reason it qualifies as a SSM.
 - (3) An estimate of the solvent loss for the duration of the SSM event with supporting documentation.

SECTION D.4

FACILITY OPERATION CONDITIONS

Facility Description [326 IAC 2-7-5(15)]:

- (o) One (1) natural gas-fired/#2 fuel oil-fired combustion unit, identified as Murray boiler, constructed in 1996;

(The information describing the process contained in this facility description box is descriptive information and does not constitute enforceable conditions.)

Emission Limitations and Standards [326 IAC 2-7-5(1)]

D.4.1 Particulate [326 IAC 6-2-4]

326 IAC 6-2-4 (Emission Limitations for Sources of Indirect Heating) applies to the Murray boiler because it was constructed in 1996 which is after the applicability date of September 21, 1983. Pursuant to this rule, the particulate emissions from the boiler shall be limited to 0.32 pounds per million Btu heat input.

D.4.2 Sulfur Dioxide (SO₂) and Opacity [326 IAC 7-1.1-1] [326 IAC 12-1] [40 CFR 60, Subpart Dc]

Pursuant to 326 IAC 7-1.1 (SO₂ Emissions Limitations) and 40 CFR 60, Subpart Dc (Standards of Performance for Small Industrial-Commercial-Institutional Steam Generating Units):

- (a) The SO₂ emissions from the Murray boiler shall not exceed five tenths (0.5) pounds per million Btu heat input, when firing fuel oil; or
- (b) The sulfur content of the fuel oil shall not exceed five-tenths percent (0.5%) by weight. [40 CFR 60.42c(d)]

Pursuant to 40 CFR 60.43c(c), when combusting fuel oil, the Murray boiler is limited to less than twenty percent (20%) opacity (6-minute average), except for one 6-minute period per hour of not more than twenty-seven percent (27%) opacity.

Pursuant to 40 CFR 60 Subpart Dc, the fuel oil sulfur content and the opacity limit applies at all times, including periods of startup, shutdown, and malfunction.

D.4.3 Preventive Maintenance Plan [326 IAC 2-7-5(13)]

A Preventive Maintenance Plan, in accordance with Section B - Preventive Maintenance Plan, of this permit, is required for this facility and its control device.

Compliance Determination Requirements

D.4.4 Sulfur Dioxide Emissions and Sulfur Content

Pursuant to 40 CFR 60, Subpart Dc, the Permittee shall demonstrate compliance utilizing one of the following options:

- (a) Providing vendor analysis of fuel delivered, if accompanied by a certification; or
- (b) Analyzing the oil sample to determine the sulfur content of the oil via the procedures in 40 CFR 60, Appendix A, Method 19.
 - (1) Oil samples may be collected from the fuel tank immediately after the fuel tank is filled and before any oil is combusted; and
 - (2) If a partially empty fuel tank is refilled, a new sample and analysis would be required upon filling.

Compliance Monitoring Requirements [326 IAC 2-7-6(1)] [326 IAC 2-7-5(1)]

D.4.5 Visible Emissions Notations

- (a) Visible emission notations of the boiler stack exhaust shall be performed once per shift during normal daylight operations when combusting fuel oil and exhausting to the atmosphere. A trained employee shall record whether emissions are normal or abnormal.
- (b) For processes operated continuously, "normal" means those conditions prevailing, or expected to prevail, eighty percent (80%) of the time the process is in operation, not counting startup or shut down time.
- (c) In the case of batch or discontinuous operations, readings shall be taken during that part of the operation that would normally be expected to cause the greatest emissions.
- (d) A trained employee is an employee who has worked at the plant at least one (1) month and has been trained in the appearance and characteristics of normal visible emissions for that specific process.
- (e) The Compliance Response Plan for this unit shall contain troubleshooting contingency and response steps for when an abnormal emission is observed. Failure to take response steps in accordance with Section C - Compliance Response Plan - Preparation, Implementation, Records, and Reports, shall be considered a deviation from this permit.

Record Keeping and Reporting Requirements [326 IAC 2-7-5(3)] [326 IAC 2-7-19]

D.4.6 Record Keeping Requirements

- (a) To document compliance with Condition D.4.2, the Permittee shall maintain records in accordance with (1) through (6) below. Note that pursuant to 40 CFR 60 Subpart Dc, the fuel oil sulfur limit applies at all times including periods of startup, shutdown, and malfunction.
 - (1) Calendar dates covered in the compliance determination period;
 - (2) Actual fuel oil usage since last compliance determination period and equivalent sulfur dioxide emissions;
 - (3) To certify compliance when burning natural gas only, the Permittee shall maintain records of fuel used.

If the fuel supplier certification is used to demonstrate compliance, when burning alternate fuels and not determining compliance pursuant to 326 IAC 3-7-4, the following, as a minimum, shall be maintained:

- (4) Fuel supplier certifications;
- (5) The name of the fuel supplier; and
- (6) A statement from the fuel supplier that certifies the sulfur content of the fuel oil.

The Permittee shall retain records of all recording/monitoring data and support information for a period of five (5) years, or longer if specified elsewhere in this permit, from the date of the monitoring sample, measurement, or report. Support information includes all calibration and maintenance records and all original strip-chart recordings for continuous monitoring instrumentation, and copies of all reports required by this permit.

- (b) To document compliance with Condition D.4.5, the Permittee shall maintain records of visible emission notations of the boiler stack exhaust once per shift.
- (c) To document compliance with Condition D.4.3, the Permittee shall maintain records of any additional inspections prescribed by the Preventive Maintenance Plan.
- (d) All records shall be maintained in accordance with Section C - General Record Keeping Requirements, of this permit.

D.4.7 Reporting Requirements

- (a) A certification, signed by the responsible official, that certifies all of the fuels combusted during the period. The natural gas-fired boiler certification does require the certification by the "responsible official" as defined by 326 IAC 2-7-1(34);
- (b) The natural gas boiler certification shall be submitted to the address listed in Section C - General Reporting Requirements, of this permit, using the reporting forms located at the end of this permit, or their equivalent, within thirty (30) days after the end of the six (6) month period being reported.
- (c) A semi-annual summary of the information to document compliance with Condition D.4.2 in any compliance period when No. 2 fuel oil was combusted, and the natural gas fired boiler certification, shall be submitted to the address listed in Section C - General Reporting Requirements, using the reporting forms located at the end of this permit, or their equivalent, within thirty (30) days after the end of the six (6) month period being reported. The report submitted by the Permittee does require the certification by the "responsible official" as defined by 326 IAC 2-7-1(34).

SECTION D.5

FACILITY OPERATION CONDITIONS

Facility Description [326 IAC 2-7-5(15)]

- (p) One (1) vegetable oil refinery process, constructed in 2002, consisting of crude vegetable oil receiving, storage, filtration, and degumming equipment; lecithin drying and processing equipment; oil refining, deodorizing, and filtration equipment; bulk oil handling, blending, storage, and loadout facilities; and including the following equipment:
 - (1) One (1) storage silo, identified as R-101, equipped with a baghouse for particulate matter control, exhausting to Stack R-101;
 - (2) One (1) surge tank, identified as R-102, equipped with a baghouse for particulate matter control, exhausting to Stack R-102;
 - (3) One (1) storage silo, identified as R-103, equipped with a baghouse for particulate matter control, exhausting to Stack R-103;
 - (4) One (1) surge tank, identified as R-104, equipped with a baghouse for particulate matter control, exhausting to Stack R-104;
 - (5) One (1) storage silo, identified as R-105, equipped with a baghouse for particulate matter control, exhausting to Stack R-105;
 - (6) One (1) surge tank, identified as R-106, equipped with a baghouse for particulate matter control, exhausting to Stack R-106; and
 - (7) One (1) natural gas-fired boiler, identified as R-107, exhausting to Stack R-107.

(The information describing the process contained in this facility description box is descriptive information and does not constitute enforceable conditions.)

Emission Limitations and Standards [326 IAC 2-7-5(1)]

D.5.1 PSD Minor Limit [326 IAC 2-2][40 CFR 52.21]

The Permittee shall be limited by the following:

Process	Baghouse/ Cyclone	Air Flow Rate (acfm)	Grain Loading (gr/dscf)	PM Limit (lb/hr)
R-101 through R-106	R-101 - R-106	--	--	1.029 (combined)

This limit, along with the limits included in Sections D.1, D.2, D.3, and D.4, ensure that the source total PM emissions remain below 250 tons per year. Therefore, 326 IAC 2-2 (Prevention of Significant Deterioration) and 40 CFR 52.21 are not applicable.

D.5.2 Particulate Emissions Limitations [326 IAC 6-3-2]

Pursuant to CP145-14642-00035, issued October 4, 2001, and 326 IAC 6-3-2, the allowable particulate emission rate from the three (3) storage silos and three (3) surge tanks, identified as R-

101 through R-106, shall not exceed the pound per hour limitations calculated with the following equation:

Interpolation of the data for process weight rate up to thirty (30) tons per hour shall be accomplished by use of the equation:

$$E = 4.10P^{0.67} \quad \text{where } E = \text{rate of emission in pounds per hour and} \\ P = \text{process weight rate in tons per hour}$$

The individual limitations are included in a IDEM, OAQ confidential file because the process weight rates are considered confidential by the source.

D.5.3 Particulate [326 IAC 6-2-4]

Pursuant to CP145-14642-00035, issued October 4, 2001, and 326 IAC 6-2-4 (Emission Limitations for Sources of Indirect Heating), the particulate emissions from R-107 shall be limited to less than 0.316 pounds per million British thermal units per hour.

D.5.4 Hazardous Air Pollutants (HAPs) [326 IAC 2-4.1]

Pursuant to CP145-14642-00035, issued October 4, 2001, the total amount of off-site soybean oil processed by the vegetable oil refinery shall be limited to less than 347,220,000 pounds per twelve (12) consecutive month period with compliance determined at the end of each month. This is equivalent to limiting the emissions of a single HAP to less than ten (10) tons per year. Therefore, the requirements of 326 IAC 2-4.1-1 (New Source Toxics Control) do not apply.

D.5.5 Volatile Organic Compounds (VOC) [326 IAC 8-1-6]

Pursuant to CP145-14642-00035, issued October 4, 2001, the total amount of off-site soybean oil processed by the vegetable oil refinery shall be limited to less than 347,220,000 pounds per twelve (12) consecutive month period with compliance determined at the end of each month. This is equivalent to limiting the emissions of VOC to less than twenty-five (25) tons per year. Therefore, the requirements of 326 IAC 8-1-6 (New Facilities: General Reduction Requirements) do not apply.

Compliance Determination Requirements

D.5.6 Particulate Matter (PM)

Pursuant to CP145-14642-00035, issued October 4, 2001, and in order to comply with Condition D.5.1 and D.5.2, the baghouses for PM control shall be in operation and control emissions from the storage silos and surge tanks, identified as R-101 through R-106, at all times when the storage silos and surge tanks are in operation.

D.5.7 HAP Emissions

Compliance with Condition D.5.4 shall be demonstrated within 30 days of the end of each month based on the total single HAP emissions for the twelve (12) month period.

D.5.8 VOC Emissions

Compliance with Condition D.5.5 shall be demonstrated within 30 days of the end of each month based on the total VOC emissions for the twelve (12) month period.

Record Keeping and Reporting Requirement [326 IAC 2-7-5(3)] [326 IAC 2-7-19]

D.5.9 Record Keeping Requirements

- (a) To document compliance with Conditions D.5.4 and D.5.5, the Permittee shall maintain monthly records of the amount of off-site soybean oil processed by the vegetable oil refinery.

- (b) All records shall be maintained in accordance with Section C - General Record Keeping Requirements, of this permit.

D.5.10 Reporting Requirements

A quarterly summary of the information to document compliance with Conditions D.5.4 and D.5.5 shall be submitted to the address listed in Section C - General Reporting Requirements, of this permit, using the reporting forms located at the end of this permit, or their equivalent, within thirty (30) days after the end of the quarter being reported. The report submitted by the Permittee does require the certification by the "responsible official" as defined by 326 IAC 2-7-1(34).

SECTION D.6 FACILITY CONDITIONS

Facility Description [326 IAC 2-7-5(15)]:

- (q) One (1) pelletizing mill, labeled as part of EU# 26, with a maximum rate of 36,000 lbs raw material per hour (18 tph) where air stream from mill does not vent to atmosphere but instead passes on to pellet cooler;
- (r) One (1) pellet cooler, labeled as part of EU# 26, with a maximum rate of 36,000 lbs raw material per hour (18 tph), using a high efficiency cyclone control device with a rating of 0.01 grains/dscf and 7,500 acfm at stack Pt#26;
- (s) One (1) totally enclosed drag conveyor, with a maximum rate of 15 tons per hour;
- (t) One (1) totally enclosed "L" path conveyor, with a maximum rate of 15 tons per hour; and
- (u) One (1) bucket leg, with a maximum rate of 15 tons per hour.

(The information describing the process contained in this facility description box is descriptive information and does not constitute enforceable conditions.)

Emission Limitations and Standards [326 IAC 2-7-5(1)]

D.6.1 Particulate Emissions Limitations [326 IAC 6-3-2] [40 CFR 52.21, Part P]

Pursuant to 326 IAC 6-3-2 the Particulate emissions from the Pellet Cooling facility shall be limited to 28.4 pounds per hour at a process weight rate of 36,000 pounds per hour:

The pounds per hour limitation was calculated with the following equation:

Interpolation of the data for the process weight rate up to 60,000 pounds per hour shall be accomplished by use of the equation:

$$E = 4.10 P^{0.67} \quad \text{where } E = \text{rate of emission in pounds per hour; and} \\ P = \text{process weight rate in tons per hour}$$

D.6.2 PSD Minor Limit [326 IAC 2-2]

Pursuant to 326 IAC 2-2 the Particulate Matter (PM) and particulate matter with aerodynamic diameter less than ten (10) micrometers (PM₁₀) emissions from the emission unit, EU#26 shall be limited to 2.74 and 1.37 lbs/hour, respectively.

Compliance with this condition is necessary in order to limit emissions to less than 25 tons/year PM and less than 15 tons/year PM₁₀ and will render the requirements of 326 IAC 2-2 not applicable to the Pellet Mill and Cooler emission unit, EU#26.

D.6.3 Preventive Maintenance Plan [326 IAC 2-7-5(13)]

A Preventive Maintenance Plan, in accordance with Section B - Preventive Maintenance Plan, of this permit, is required for this facility and its control device.

Compliance Determination Requirements

D.6.4 Particulate Control

In order to comply with D.6.1 and D.6.2, the cyclone for particulate control shall be in operation and control emissions from the Pellet Cooler at all times that the Pellet Mill/Cooler process is in operation.

D.6.5 Testing Requirements [326 IAC 2-7-6(1),(6)] [326 IAC 2-1.1-11]

Within 60 days after achieving the maximum production rate for emission unit EU#26 but no later than 180 days after startup of the emission unit, the Permittee shall perform PM and PM₁₀ testing in order to determine compliance with D.6.1 and D.6.2 utilizing methods as approved by the Commissioner, and furnish the Commissioner a written report of the results of such performance tests.

These tests shall be repeated at least once every five (5) years from the date of this valid compliance demonstration. PM₁₀ includes filterable and condensable PM₁₀. Testing shall be conducted in accordance with Section C – Performance Testing.

Compliance Monitoring Requirements [326 IAC 2-7-6(1)] [326 IAC 2-7-5(1)]

D.6.6 Visible Emissions Notations

- (a) Once per day visible emission notations of the Pellet Cooler stack exhaust shall be performed during normal daylight operations when exhausting to the atmosphere. A trained employee shall record whether emissions are normal or abnormal.
- (b) For processes operated continuously, "normal" means those conditions prevailing, or expected to prevail, eighty percent (80%) of the time the process is in operation, not counting startup or shut down time.
- (c) In the case of batch or discontinuous operations, readings shall be taken during that part of the operation that would normally be expected to cause the greatest emissions.
- (d) A trained employee is an employee who has worked at the plant at least one (1) month and has been trained in the appearance and characteristics of normal visible emissions for that specific process.
- (e) The Compliance Response Plan for this unit shall contain troubleshooting contingency and response steps for when an abnormal emission is observed. Failure to take response steps in accordance with Section C - Compliance Response Plan - Preparation, Implementation, Records, and Reports, shall be considered a deviation from this permit.

D.6.7 Cyclone Inspections

An external inspection shall be performed each calendar quarter and an internal inspection shall be performed each calendar year of the cyclone controlling the Pellet Mill /Cooler process. Inspections required by this condition shall not be performed during consecutive months.

Record Keeping and Reporting Requirements [326 IAC 2-7-5(3)] [326 IAC 2-7-19]

D.6.8 Record Keeping Requirements

- (a) To document compliance with Condition D.6.6, the Permittee shall maintain records of visible emission notations of the Pellet Cooling stack exhaust once per day.
- (b) To document compliance with Condition D.6.7, the Permittee shall maintain records of the results of the inspections required under Condition D.6.7.
- (c) All records shall be maintained in accordance with Section C - General Record Keeping Requirements, of this permit.

SECTION D.7

FACILITY OPERATION CONDITIONS

Facility Description [326 IAC 2-7-5(15)]:

- (v) The following emission units used in truck receiving operations, using the truck receiving/storage baghouse (identified as #17) for control, and exhausting through stack Pt #1:
- (1) Two (2) screens, identified as #4, with a total maximum throughput rate of 1,210 tons per hour.
 - (2) One (1) transfer system, identified as #9a, with a maximum throughput rate of 1,150 tons per hour, transferring soybeans from the bulk storage elevator to the bulk storage silos.
 - (3) One (1) enclosed whole bean conveyor, identified as #16a, with a maximum throughput rate of 340 tons per hour, conveying beans from the surge bin leg to the whole bean surge silo (#28a).
 - (4) One (1) whole bean surge silo, identified as #28a, with a maximum storage capacity of 40,000 bushels.
 - (5) One (1) enclosed conveyor, identified as #17a, with a maximum throughput rate of 40 tons per hour, conveying the dust from the truck receiving/storage baghouse (#17) to the screening leg.
 - (6) One (1) new bean screening screw conveyor, identified as #1a, with a maximum throughput rate of 36 tons per hour, transferring soybeans from the screening system (#4) to the screening leg baghouse.
- (w) The following emission units used in meal processing operations, using the meal grinding baghouse (identified as #39b) for control, and exhausting through stack Pt #24:
- (1) One (1) enclosed meal screener feeder conveyor, identified as #74a, with a maximum throughput rate of 80 tons per hour, conveying the meal produced to the meal screen system.
 - (2) One (1) enclosed meal grinder feed conveyor, identified as #75a, with a maximum throughput rate of 80 tons per hour, conveying the meal from the meal screen system to meal feeders.
 - (3) One (1) meal grinding system, identified as #76, consisting of three (3) hammer mills, with a total maximum process rate of 80 tons per hour. This process rate is limited by the maximum throughput rate of the conveyors.
 - (4) Two (2) enclosed sized meal conveyors, identified as #78a, with a total maximum throughput rate of 80 tons per hour, conveying the ground meal from the meal grinding system (#76) to the meal handling system.

(The information describing the process contained in this facility description box is descriptive information and does not constitute enforceable conditions.)

Emission Limitations and Standards [326 IAC 2-7-5(1)]

D.7.1 General Provisions Relating to NSPS [326 IAC 12-1] [40 CFR Part 60, Subpart A]

The provisions of 40 CFR Part 60, Subpart A - General Provisions, which are incorporated by reference in 326 IAC 12-1, apply to the screens, associated grain conveying equipment, and the truck receiving/storage baghouse (#17), except when otherwise specified in 40 CFR Part 60, Subpart DD.

D.7.2 New Source Performance Standards(NSPS) Grain Elevators [326 IAC 12] [40 CFR Part 60, Subpart DD]

Pursuant to 40 CFR Part 60, Subpart DD (Standards of Performance for Grain Elevators), the emissions from the screens, associated grain conveying equipment, and the truck receiving/storage baghouse (#17) shall not exceed the following limits:

- (a) 0.01 gr/dscf of PM; and
- (b) 0 percent opacity.

D.7.3 Prevention of Significant Deterioration [326 IAC 2-2]

- (a) Pursuant to 326 IAC 2-2 and CP #145-4300-00035, issued July 17, 1995, the PM and PM10 emissions from the truck receiving storage baghouse (Baghouse #17) each shall not exceed 0.01 gr/dscf. Based on the design flow rate of 38,500 cfm of the baghouse #17, this is equivalent to 3.30 lbs/hr and 14.5 tons/yr of PM/PM10 emissions.
- (b) Pursuant to 326 IAC 2-2, the PM and PM10 emissions from the meal grinding baghouse (Baghouse #39b) each shall not exceed 0.01 gr/dscf. Based on the design flow rate of 38,400 cfm of the baghouse #39b, this is equivalent to 3.29 lbs/hr and 14.4 tons/yr of PM/PM10 emissions.

Therefore, the PM and PM10 emissions from this modification are each limited to less than 250 tons/yr and the requirements of 326 IAC 2-2 (PSD) are not applicable.

D.7.4 Particulate [326 IAC 6-3-2]

Pursuant to 326 IAC 6-3-2 (Particulate Emission Limitations for Manufacturing Processes), the allowable particulate emissions from each of the conveyor and facility of the meal grinding operation shall not exceed 49.1 pounds per hour when operating at a process weight rate of 80 tons per hour.

The pounds per hour limitation was calculated with the following equation:

Interpolation of the data for the process weight rate in excess of sixty thousand (60,000) pounds per hour shall be accomplished by use of the equation:

$$E = 55.0 P^{0.11} - 40 \quad \text{where } E = \text{rate of emission in pounds per hour; and} \\ P = \text{process weight rate in tons per hour}$$

D.7.5 Preventive Maintenance Plan [326 IAC 2-7-5(13)]

A Preventive Maintenance Plan, in accordance with Section B - Preventive Maintenance Plan, of this permit, is required for this facility and its control device.

Compliance Determination Requirements

D.7.6 PM and PM10 Control

In order to comply with Conditions D.7.2, D.7.3, and D.7.4, the truck receiving/storage baghouse (#17) and the meal grinding baghouse (#39b) for particulate control shall be in operation and control emissions from the truck receiving and meal processing operations at all times that the truck receiving and meal processing units are in operation.

Compliance Monitoring Requirements [326 IAC 2-7-6(1)] [326 IAC 2-7-5(1)]

D.7.7 Visible Emissions Notations

- (a) Visible emission notations of stack exhausts from the truck receiving/storage baghouse (#17) and the meal grinding baghouse (#39b) shall be performed once per day during normal daylight operations. A trained employee shall record whether emissions are normal or abnormal.
- (b) For processes operated continuously, "normal" means those conditions prevailing, or expected to prevail, eighty percent (80%) of the time the process is in operation, not counting startup or shut down time.
- (c) In the case of batch or discontinuous operations, readings shall be taken during that part of the operation that would normally be expected to cause the greatest emissions.
- (d) A trained employee is an employee who has worked at the plant at least one (1) month and has been trained in the appearance and characteristics of normal visible emissions for that specific process.
- (e) The Compliance Response Plan for this unit shall contain troubleshooting contingency and response steps for when an abnormal emission is observed. Failure to take response steps in accordance with Section C - Compliance Response Plan - Preparation, Implementation, Records, and Reports, shall be considered a deviation from this permit.

D.7.8 Parametric Monitoring

The Permittee shall record the total static pressure drop across the truck receiving/storage baghouse (#17) and the meal grinding baghouse (#39b), at least once per day when the listed processes are in operation. When for any one reading, the pressure drop across the baghouses is outside the normal range of 0.5 to 6.0 inches of water or a range established during the latest stack test, the Permittee shall take reasonable response steps in accordance with Section C - Compliance Response Plan - Preparation, Implementation, Records, and Reports. A pressure reading that is outside the above mentioned range is not a deviation from this permit. Failure to take response steps in accordance with Section C - Compliance Response Plan - Preparation, Implementation, Records, and Reports, shall be considered a deviation from this permit.

The instrument used for determining the pressure shall comply with Section C - Pressure Gauge and Other Instrument Specifications, of this permit, shall be subject to approval by IDEM, OAQ, and shall be calibrated at least once every six (6) months or at a frequency recommended by the manufacturer.

D.7.9 Baghouse Inspections

- (a) An inspection of all bags controlling particulate emissions from the truck receiving/storage process (identified as #17; Pt #1) and meal grinding process (identified as #39b; Pt #24) shall be performed at least once per calendar year.

Inspections required by this condition shall not be performed in consecutive months. All defective bags shall be replaced.
- (b) Inspections shall also be performed whenever the respective baghouse is out of service for more than 24 consecutive hours. All defective bags shall be replaced.

D.7.10 Broken or Failed Bag Detection

In the event that bag failure has been observed:

- (a) For multi-compartment units, the affected compartments will be shut down immediately until the failed units have been repaired or replaced. Operations may continue only if there are no visible emissions or if the event qualifies as an emergency and the Permittee satisfies the emergency provisions of this permit (Section C - Emergency Provisions). Within eight (8) business hours of the determination of failure, response steps according to the timetable described in the Compliance Response Plan shall be initiated. For any failure with corresponding response steps and timetable not described in the Compliance Response Plan, response steps shall be devised within eight (8) business hours of discovery of the failure and shall include a timetable for completion. Failure to take response steps in accordance with Section C - Compliance Response Plan - Preparation, Implementation, Records, and Reports, shall be considered a deviation from this permit.
- (b) For single compartment baghouses, failed units and the associated process will be shut down immediately until the failed units have been repaired or replaced. Operations may continue only if the event qualifies as an emergency and the Permittee satisfies the requirements of the emergency provisions of this permit (Section B - Emergency Provisions).

Record Keeping and Reporting Requirement [326 IAC 2-7-5(3)] [326 IAC 2-7-19]

D.7.11 Record Keeping Requirements

- (a) To document compliance with Condition D.7.7, the Permittee shall maintain once per day records of visible emission notations of the baghouse stack exhausts.
- (b) To document compliance with Condition D.7.8, the Permittee shall maintain once per day records of the total pressure drop across the baghouses.
- (c) To document compliance with Condition D.7.9, the Permittee shall maintain records of the results of the inspections required under Condition D.7.9.
- (d) All records shall be maintained in accordance with Section C - General Record Keeping Requirements, of this permit.

SECTION D.8

FACILITY CONDITIONS

Facility Description [326 IAC 2-7-5(15)]:

A-PLANT (NEW EQUIPMENT)

- (x) One (1) totally enclosed screening conveyor, identified as #1a.
- (y) One (1) screening leg, identified as #7a, controlled by truck receiving /storage baghouse, and exhausting at stack Pt #1.
- (z) One (1) conveyor to bulk storage feeding to bulk storage silos, identified as #9a, controlled by truck receiving /storage baghouse, and exhausting at stack Pt #1.
- (aa) One (1) screening bin, identified as #10a.
- (ab) One (1) screening from storage conveyor after screening conveyor, identified as #13a.
- (ac) One (1) conveyor to surge bin leg, identified as #16a.
- (ad) One (1) truck receiving /storage baghouse conveyor, identified as #17a, transferring the dust from the baghouse to the screenings leg directly aspirated to the truck receiving /storage baghouse.
- (ae) Three (3) totally enclosed conveyors to hull refining screener, identified as #25a.
- (af) One (1) totally enclosed dryer feed conveyor to the dryer feed elevator, identified as #29a.
- (ag) One (1) hull refining screener, identified as #48a, exhausting to hull refining cyclone.
- (ah) One (1) hull refining aspirator, identified as #49a, exhausting to hull refining cyclone.
- (ai) One (1) totally enclosed millfeed conveyor to storage, identified as #53a.
- (aj) One (1) millfeed elevator, identified as #54a, controlled by millfeed baghouse, and exhausting at stack Pt #16.
- (ak) One (1) seal screw conveyor, identified as #61a.
- (al) One (1) totally enclosed meal screen feeder conveyor, identified as #74a.
- (am) Two (2) totally enclosed sized meal conveyors, identified as #78a.

B-PLANT

- (an) One (1) aspirator between conveyor from storage and surge bin leg, aspirated to truck receiving /storage baghouse, identified as #1b, and exhausting at stack Pt #1.
- (ao) One (1) totally enclosed millfeed conveyor to storage, identified as #2b.

(The information describing the process contained in this facility description box is descriptive information and does not constitute enforceable conditions.)

SECTION D.8

FACILITY CONDITIONS Continued...

Facility Description [326 IAC 2-7-5(15)]:

- (ap) One (1) millfeed elevator controlled by millfeed baghouse, identified as #3b, and exhausting at stack Pt #16.
- (aq) One (1) aspirator between milling leg and bean scale, identified as #4b, aspirated to milling baghouse, and exhausting at stack Pt #4.
- (ar) One (1) totally enclosed hull collecting conveyor, identified as #5b, feeding to "B" plant hull refining screener.
- (as) One (1) "B" plant whole bean surge bin #2, identified as #6b, controlled by a cyclone, and the screening baghouse, and exhausting at stack Pt #5.
- (at) One (1) hull refining cyclone, identified as #7b, discharging to the screening baghouse, and exhausting at stack Pt #5.
- (au) One (1) "B" plant whole soybean feed bucket elevator, identified as #8b, controlled by hull refining cyclone, and the screening baghouse, and exhausting at stack Pt #5.
- (av) One (1) "B" plant totally enclosed soybean feed conveyor, identified as #9b.
- (aw) One (1) "B" plant whole bean aspiration, identified as #10b, controlled by the screening baghouse, and exhausting at stack Pt #5.
- (ax) One (1) "B" plant bean weighing system, identified as #11b, controlled by the screening baghouse, and exhausting at stack Pt #5.
- (ay) One (1) "B" plant totally enclosed millfeed grinding conveyor, identified as #12b, controlled by the screening baghouse, and exhausting at stack Pt #5.
- (az) One (1) "B" plant hull refining screener, identified as #13b, controlled by a hull refining cyclone, and the screening baghouse, and exhausting at stack Pt #5.
- (ba) One (1) "B" plant aspirator, identified as #14b, controlled by a hull refining cyclone, and the screening baghouse, and exhausting at stack Pt #5.
- (bb) One (1) "B" plant totally enclosed feed conveyor, identified as #15b.
- (bc) One (1) set of "B" plant bean heaters, identified as #16b, controlled by a bean heater cyclone, and exhausting at stack Pt # 18A.
- (bd) One (1) totally enclosed "B" plant soybean conveyor (feeding the jet dryers), identified as #17b, controlled by a bean heater cyclone, and exhausting at stack Pt # 18A.
- (be) One (1) set of "B" plant jet dryers, identified as #18b, controlled by a dryer cyclone, and exhausting at stack Pt # 18A.
- (bf) One (1) "B" plant bean heaters cyclone, identified as #19b, exhausting at stack Pt # 18A.

(The information describing the process contained in this facility description box is descriptive information and does not constitute enforceable conditions.)

SECTION D.8

FACILITY CONDITIONS Continued...

Facility Description [326 IAC 2-7-5(15)]:

- (bg) One (1) "B" plant bean dryers cyclone, identified as #20b, exhausting at stack Pt # 18A.
- (bh) One (1) "B" plant hullsoenators, identified as #21b, maximum total capacity of 127.5 tons per hour.
- (gi) One (1) set of "B" plant cascade dryers, identified as #22b.
- (bj) One (1) set of "B" plant cracking rolls, identified as #23b.
- (bk) One (1) set of "B" plant cascade coolers, identified as #24b, controlled by a ccc cyclone, and exhausting at stack Pt # 18A.
- (bl) Three (3) "B" plant totally enclosed after cascade coolers conveyors (feeding the flakers), identified as #25b, controlled by a ccc cyclone, and exhausting at stack Pt # 18A.
- (bm) One (1) "B" plant ccc cyclone, identified as #26b, exhausting at stack Pt # 18A.
- (bn) One (1) set of "B" plant flakers, identified as #27b, controlled by a flakers baghouse, and exhausting at stack Pt # 19.
- (bo) One (1) "B" plant flakers baghouse, identified as #28b, exhausting at stack Pt # 19.
- (bp) One (1) "B" plant totally enclosed flake conveyor (feeding the seal conveyor), identified as #28b.
- (bq) One (1) "B" plant totally enclosed seal screw conveyor (feeding the slurry loader conveyor), identified as #29b.
- (br) One (1) "B" plant totally enclosed slurry loader conveyor (feeding the extractor), identified as #30b.
- (bs) One (1) "B" plant soybean oil extractor, identified as #31b, controlled by two (2) mineral oil absorbers, and exhausted at stack Pt. # 23.
- (bt) A set of "B" plant evaporators, identified as #32b, controlled by two mineral oil absorbers, and exhausted at stack Pt. # 23.
- (bu) A set of "B" plant condensers and water separator to separate hexane and water, identified as #33b, controlled by two mineral oil absorbers, and exhausted at stack Pt. # 23.
- (bv) Two (2) "B" plant mineral oil absorbers, identified as #34b, exhausting at stack Pt. # 23.
- (bw) One (1) totally enclosed "B" plant spent flake conveyor, identified as #35b.
- (bx) Two (2) "B" plant meal dryers (#3 & #4), identified as #36b, controlled by one (1) dryer cyclone, and exhausting at stack Pt. # 21.
- (by) Two (2) "B" plant meal coolers (#3 & #4), identified as #37b, controlled by one (1) cooler cyclone, and exhausting at stack Pt. # 22.

(The information describing the process contained in this facility description box is descriptive information and does not constitute enforceable conditions.)

SECTION D.8

FACILITY CONDITIONS Continued...

Facility Description [326 IAC 2-7-5(15)]:

- (bz) Four (4) "B" plant totally enclosed unground meal conveyors in series (meal screening system), identified as #38b.
- (ca) One (1) meal grinding baghouse, identified as #39b, exhausting at stack Pt #24.)
- (cb) One (1) main 337 MMBtu per hour boiler, natural gas or distillate oil fired, identified as #40b, controlled by low NOx burners and flue gas recirculation, and exhausting at stack Pt. # 20.
- (cc) One (1) screening leg, identified as #41b, transferring screenings from the screenings transfer conveyors to the screening surge bin.
- (cd) One (1) totally enclosed dryer feed conveyor, identified as #42b, transferring beans to the dryer feed elevator, controlled by screening baghouse, and exhausting at stack Pt #5.
- (ce) One (1) day bin, identified as #43b.
- (cf) One (1) meal screen feeder conveyor, identified as #44b.
- (cg) One (1) rail meal loadout conveyor, identified as #45b, controlled by "B" plant rail loadout baghouse. and exhausting at stack Pt #17.
- (ch) One (1) "B" plant rail loader, identified as #46b, controlled by "B" plant rail loadout baghouse and exhausting at stack Pt #17.
- (ci) One (1) rail scale, identified as #47b.
- (cj) One (1) "B" plant rail loadout baghouse, identified as #48b, exhausting at stack Pt #17.

(The information describing the process contained in this facility description box is descriptive information and does not constitute enforceable conditions.)

Emission Limitations and Standards [326 IAC 2-7-5(1)]

D.8.1 General Provisions Relating to NSPS [326 IAC 12-1] [40 CFR Part 60, Subpart A]

The provisions of 40 CFR Part 60, Subpart A - General Provisions, which are incorporated by reference in 326 IAC 12-1, apply to the facility described in this section except when otherwise specified in 40 CFR Part 60, Subpart Db.

D.8.2 New Source Performance Standard (NSPS) [326 IAC 12] [40 CFR 60, Subpart Db]

Pursuant to SSM 145-9618-00035, 326 IAC 12 and 40 CFR 60, Subpart Db (Standards of Performance for Industrial-Commercial-Institutional Steam Generating Units):

- (a) Pursuant to 40 CFR 60.43b(f) (Opacity Limitation), on and after the date on which the initial performance test is completed or required to be completed under 40 CFR 60.8, whichever date comes first, the Permittee shall not cause to be discharged into the atmosphere from the Boiler no. 2, any gases that exhibit greater than 20 percent opacity (6-minute average) during periods in which fuel oil no. 2 is combusted, except for one 6-minute period per hour of not more than 27 percent opacity. The opacity standards apply at all times, except during period of startup, shutdown, or malfunction.

- (b) Pursuant to 40 CFR 60.44b(a) (Nitrogen Oxides Limitation) the Permittee shall not cause to be discharged into the atmosphere from the boiler #2 any gases that contain nitrogen oxides (expressed as NO₂) in excess of 0.20 lb/million Btu. The nitrogen oxides standard shall apply at all times including the period of start-up, shutdown, or malfunction emissions.
- (c) Pursuant to 40 CFR 60.42b(d) and 326 IAC 7-1.1-2 (Sulfur Dioxides Limitation), on and after the date on which the initial performance test is completed or required to be completed under 40 CFR 60.8, whichever date comes first:
 - (1) The SO₂ emissions from the 240 MMBtu per hour boiler no. 2 shall not exceed five tenths (0.5) pounds per million Btu heat input; or
 - (2) The sulfur content of the fuel oil shall not exceed five-tenths percent (0.5%) by weight.[40 CFR 60.8]
 - (3) The SO₂ emission limits and fuel oil sulfur limits apply at all times, including period of startup, shutdown, and malfunction. [40 CFR 60.8]

D.8.3 General Provisions Relating to NESHAP [326 IAC 20-1] [40 CFR 63, Subpart A]

The provisions of 40 CFR 63, Subpart A - General Provisions, which are incorporated by reference in 326 IAC 20-1, apply to the oil extraction and processing operations listed in this section except when otherwise specified in 40 CFR 63, Subpart GGGG.

D.8.4 Solvent Extraction for Vegetable Oil Production NESHAP [326 IAC 20] [40 CFR Part 63, Subpart GGGG]

The B plant is subject to 40 CFR 63.2840 with a compliance date of the startup date of the B-plant. The solvent (hexane) loss factor from the soybean process shall not exceed 0.2 gallons per ton of soybeans processed. The Permittee shall:

- (a) Calculate a compliance ratio, which compares the actual HAP loss to the allowable HAP loss for the previous 12 operating months. An operating month, as defined in 40 CFR 63.2872, is any calendar month in which a source processes soybean, excluding any calendar month in which the source operated under an initial startup period subject to 40 CFR 63.2850(c)(2) or (d)(2) or a malfunction period subject to 40 CFR 63.2850(e)(2). The equation to calculate a compliance ratio follows:

(1) Compliance Ratio = (Actual HAP loss)/(Allowable HAP loss) (Eq. 1)

- (2) Equation 1 can also be expressed as a function of total solvent loss as shown in Equation 2.

(3) Compliance Ratio = [f* Actual Solvent Loss]/
0.64[{(Soybean processed)C * (SLFC)} } (Eq. 2)

f = The weighted average volume fraction of HAP in solvent received during the previous 12 operating month, as determined in 40 CFR 63.2854, dimensionless

0.64 = The average volume fraction of HAP in solvent in the baseline performance data, dimensionless

Actual Solvent Loss = Gallons of actual solvent loss during previous 12 operating months, as determined in 40 CFR 63.2853

SLFC = 0.2 gals/ton (for A and B plants)

as listed in Table 1 of 40 CFR 63.2840

- (b) When the source has processed soybean for 12 operating months, calculate the compliance ratio by the end of each calendar month following an operating month using Equation 2. When calculating the compliance ratio, consider the following conditions and exclusions in paragraphs (b)(1) through (6):
- (1) If soybean is processed in a calendar month and the process is not operating under an initial startup period or malfunction period subject to 40 CFR 60.2850, then that month is categorized as an operating month, as defined in 40 CFR 63.2872.
 - (2) The 12 month compliance ratio may include operating months prior to a source shutdown and operating months that follow after the source resumes operation.
 - (3) If the source shuts down and processes no soybean for an entire calendar month as a non operating month, as defined in 40 CFR 63.2872, exclude any non operating months from the compliance ratio determination.
 - (4) If the source is subject to an initial startup period as defined in 40 CFR 63.2872, exclude from the compliance ratio determination any solvent and soybean information recorded for the initial startup period.
 - (5) If the source is subject to a malfunction period as defined in 40 CFR 63.2872, exclude from the compliance ratio determination any solvent and soybean information recorded for the malfunction period.
 - (6) The solvent loss factor to determine the compliance ratio may change each operating month depending on the tons of soybean processed during all normal operating periods in a 12 operating month period.
- (c) If the compliance ratio is less than or equal to 1.00, then the source met the HAP emission requirements for the previous operating month.
- (d) The Permittee shall develop and implement a written plan in accordance with 40 CFR 63.2851 that provides the detailed procedures to monitor and record necessary data.
- (e) The Permittee shall develop a written SSM (Startup, Shutdown, and Malfunction) in accordance with 40 CFR 63.6(e)(3), and implement the plan, when applicable. The Permittee must complete the SSM plan before the compliance date for this source.
- (f) The SSM plan provides detailed procedures for operating and maintaining the source to minimize emissions during a qualifying SSM event for which the source chooses the 40 CFR 63.2850(e)(2) malfunction period, or the 40 CFR 63.2850(c)(2) or (d)(2) initial startup period. The SSM plan must specify a program of corrective action for malfunctioning process and air pollution control equipment and reflect the best practices now in use by the industry to minimize emissions.

D.8.5 PSD Minor Limit [326 IAC 2-2]

Pursuant to 326 IAC 2-2:

- (a) The soybean processed by the "B" plant shall be limited to 1,065,538 tons per 12-month period, rolled on a monthly basis. This soybean limitation is required to limit the potential to emit of PM and PM-10 to 225 and 218 tons per 12-month period, rolled on a monthly basis, respectively.

During the first twelve (12) months after issuance of this Significant Source Modification, the total amount of soybeans processed shall be limited such that the total soybean processed divided by the accumulated months of operation shall not exceed 88,795 tons up to a maximum total of 1,065,538 tons for the first twelve (12) months.

(b) The following facilities' PM and PM-10 emissions rates shall be limited as follows:

Process	Baghouse/ Cyclone	Air Flow Rate (acfm)	Grain Loading (gr/dscf)	PM Limit (lb/hr)	PM-10 Limit (Filterable) (lb/hr)
Truck unloading #1 and #2 fugitives				7.29	2.39
Rail unloading fugitives				0.64	0.156
B Bean Heater	Baghouse Pt #25	18,000	0.004	0.62	0.62
Hot cracking and dehulling system, B-plant	Four Cyclones Pt #18	121,800	0.025	25.8	25.8
Soybean Flaking, B-Plant	Baghouse Pt #19	16,000	0.005	0.69	0.69
DTDC meal dryers #1 and #2, B-Plant	Cyclone Pt #21	38,000	0.014	4.56	4.56
DTDC meal coolers #1 and #2, B-Plant	Cyclone Pt #21	22,000	0.068	12.82	12.82
Meal sizing system	Baghouse Pt. #24	30,000	0.005	1.29	1.29
Boiler 2		6,343,949 gals of #2 fuel oil		10.5 tpy	10.5 tpy

(c) The amount of distillate oil with 0.5% sulfur maximum, combusted in the boiler no. 2 shall be limited to 6,343,949 gallons rolled on a monthly basis. This distillate oil limitation is required to limit the potential to emit of SO₂ emissions of 249 tons per 12 month period, rolled on a monthly basis.

During the first twelve (12) months after issuance of this Significant Source Modification, the total amount of distillate oil combusted shall be limited such that the total distillate oil combusted divided by the accumulated months of operation shall not exceed 528,662 gallons up to a maximum total of 6,343,949 gallons for the first twelve (12) months.

Compliance with these limits makes 326 IAC 2-2 (Prevention of Significant Deterioration) not applicable for PM and SO₂ emissions. This will also satisfy the rule 326 IAC 6-3-2.

Pursuant to 326 IAC 6-3-2, the particulate emissions from the screen grinding, whole surge bins loading and unloading, whole bean aspiration, whole bean weighting, hot cracking and dehulling system (B-plant), flaking system (B-plant), soybean millfeed grinding system (B-plant), DTDC meal dryers (B-plant), DTDC meal coolers (B-plant), meal sizing system, flow coat unloading system, and meal and millfeed storage and loadout system shall not exceed the pound per hour emission rate calculated using the following equations:

Interpolation of the data for the process weight rate up to thirty (30) tons per hour shall be accomplished by use of the equation:

$$E = 4.10 P^{0.67} \quad \text{where } E = \text{rate of emission in pounds per hour and} \\ P = \text{process weight rate in tons per hour}$$

or depending on the process weight rate:

Interpolation and extrapolation of the data for the process weight rate in excess of thirty (30) tons per hour shall be accomplished by use of the equation:

$$E = 55.0 P^{0.11} - 40 \quad \text{where } E = \text{rate of emission in pounds per hour and} \\ P = \text{process weight rate in tons per hour}$$

The individual limitations are included in a IDEM, OAQ confidential file because the process weight rates are considered confidential by the source.

D.8.7 Particulate Emission Limitations for Sources of Indirect Heating [326 IAC 6-2-4]

Pursuant to 326 IAC 6-2-4, the PM emissions from Boiler No. 2 shall not exceed 0.24 pound per million Btu heat input (lb/MMBtu). This limitation was calculated using the following equation:

$$Pt = \frac{1.09}{Q^{0.26}}$$

Where Pt = emission rate limit (lbs/MMBtu)
 Q = total source capacity (337 MMBtu/hr)

D.8.8 Best Available Control Technology (BACT) [326 IAC 8-1-6]

Pursuant to 326 IAC 2-2-3 (BACT Requirements):

- (a) the Permittee shall control volatile organic compound (VOC) emissions from the combined "A" and "B" soybean oil extraction processes as follows:

Facility	Control	Emission Limit
Oil extractor "B" plant	Mineral oil absorber system	0.069 lb VOC/ton soybean
Meal dryers "B" plant	None	0.152 lb VOC/ton soybean
Meal coolers "B" plant	None	0.152 lb VOC/ton soybean
Combined "A" and "B" plants	First Year	0.20 gal VOC/ton soybean processed
	After first year	0.19 gal VOC/ton soybean processed
Maximum annual soybean		1,901,996 tons per year

processed by combined "A" and "B" plants		
--	--	--

- (b) BACT for fugitive hexane loss will include an annual leak check in accordance with Bunge's standard operating procedures accompanied by continuous monitoring of the process area by flammable gas monitors. The leak check will be completed on the affected system after hexane is reintroduced into the system.

For emergency repairs and/or maintenance completed between annual maintenance shutdowns, a leak check will be completed on the affected.

- (1) The Permittee shall immediately tag all detected leaks with a weatherproof and readily visible identification tag with a distinct number. Once a leaking component is detected, first-attempt repairs must be done within five days and be completed within 15 days of detecting the leaking components. If the repair can not be accomplished within 15 days, then the Permittee shall send a notice of inability to repair to the OAQ within 20 days of detecting the leak. The notice must be received by the Technical Support and Modeling, Office of Air Quality, 100 North Senate Avenue, P. O. Box 6015, Indianapolis, Indiana 46206-6015 within 20 days after the leak was detected. At a minimum the notice shall include the following:
- (A) Equipment, operator, and instrument identification number, and date of leak detection
 - (B) Measured concentration (ppm) and background (ppm)
 - (C) Leak identification number associated with the corresponding tag
 - (D) Reason of inability to repair within 5 to 15 days of detection

Compliance Determination Requirements

D.8.9 Testing Requirements [326 IAC 2-7-6(1), (6)] [326 IAC 2-1.1-11], [326 IAC 2-2], and [326 IAC 3]

- (a) Pursuant to SSM 145-9618-00035, 40 CFR 60, subpart Db and 326 IAC 2-2, compliance tests, tests for PM and PM-10, and opacity observations shall be performed for the affected facilities, as shown below, to comply with Conditions D.8.2 and D.8.5(a) and (b) within 60 days after achieving maximum production rate, but no later than 180 days after initial start up. PM-10 includes filterable and condensable PM-10. Testing shall be conducted in accordance with Section C- Performance Testing.

<u>Facilities</u>	<u>Pollutant/Opacity</u>
Receiving baghouses (PT # 01 & 02)	PM/PM-10/Opacity
Screening baghouse (PT # 05)	PM/PM-10/Opacity
Boiler #2	Opacity/NOx

- (b) Pursuant to 40 CFR 60, Subpart Db, the Permittee shall determine one of the following:
- (1) Provide vendor analysis of fuel delivered, if accompanied by a certification; or
 - (2) Analyze the oil sample to determine the sulfur content of the oil via the procedures in 40 CFR 60, Appendix A, Method 19.

- (A) Oil samples may be collected from the fuel tank immediately after the fuel tank is filled and before any oil is combusted; and
- (B) If a partially empty fuel tank is refilled, a new sample and analysis would be required upon filling.
- (c) Pursuant to 326 IAC 3 (Construction and Operating Permit Requirements), the Permittee shall develop a representative stack testing plan which identifies the method in which emissions from the following sources shall be evaluated to satisfy the Operation Condition No. D.8.5(a), and (b), within 18 months of startup. The facilities listed in (a) above may be proposed as representative facilities.

<u>Facilities</u>	<u>Pollutant</u>
Hot cracking and dehulling system, B-plant (Pt# 18)	PM, PM-10
Soybean flaking, B-plant (PT# 19)	PM, PM-10
Mineral oil absorber (PT# 23)	VOC, Mineral oil flow rate
DTDC meal dryers #1 & #2, B-plant (PT# 21)	PM, PM-10
DTDC meal coolers #1 & #2, B-plant (PT# 22)	PM, PM-10
Meal sizing system (PT# 24)	PM, PM-10
Millfeed and meal storage and truck loadout (PT# 12)	PM, PM-10
Rail loadout #1 (PT# 13)	PM, PM-10

The Permittee shall submit the stack test plan to IDEM after the entire source has achieved a successful start up. This plan shall be reviewed and approved by IDEM. This plan shall outline the measures to be taken to meet the permitted emission rates and shall provide that the emission units meet the limits for the facilities except the facilities in (a) be completed within 18 months of the date of the entire source start-up. The stack tests shall be performed for the facilities in (a) within 60 days after achieving maximum production rate, but no later than 180 days after initial start up of the facilities in (a).

- (d) Whenever the results of the stack test performed exceed the level specified in this permit, appropriate corrective actions shall be implemented within thirty (30) days of receipt of the test results. These actions shall be implemented immediately unless notified by OAQ that they are acceptable. The Permittee shall minimize emissions while the corrective actions are being implemented.
- (e) Whenever the results of the stack test performed exceed the level specified in this permit, a second test shall be performed within 120 days. Failure of the second test to meet the limits may be grounds for immediate revocation of this permit to operate the affected facility.

D.8.10 Particulate

In order to comply with Condition D.8.5(a) and (b), the bag houses and cyclones for particulate matter control shall be in operation and control emissions from the associated facilities at all times when the processes are in operation.

D.8.11 Volatile Organic Compounds (VOC)

In order to comply with Condition D.8.4, the absorber shall be operated at all times the oil extractor process is in operation at an average mineral oil flow rate to be determined at the time of the VOC (hexane) test.

D.8.12 Opacity [326 IAC 12] [40 CFR 60.48]

Pursuant to 40 CFR 60.48b (a) the Permittee shall install, calibrate, maintain, and operate a continuous monitoring system for measuring the opacity of emissions discharged to the atmosphere from the boiler no. 2 at any time that the boiler is combusting fuel oil no. 2.

D.8.13 Nitrogen Oxides Emissions (NOx) [326 IAC 12] [40 CFR 60.48]

Pursuant to 40 CFR 60.48b (b), (c), (d), and (e), the Permittee shall install, calibrate, maintain, and operate a continuous monitoring system for measuring nitrogen oxides emissions discharged to the atmosphere from the boiler no. 2.

or

Pursuant to 40 CFR 60.48b (g) the Permittee shall monitor steam generating unit operating conditions and predict nitrogen dioxides emission rates as specified in a plan submitted pursuant to 40 CFR 60.49b(c).

Compliance Monitoring Requirements [326 IAC 2-7-6(1)] [326 IAC 2-7-5(1)]

D.8.14 Visible Emissions Notations

- (a) Visible emission notations of the stack exhaust Pt# 1, 4, 5, 16, 17, 18, 19, 20, 21, 22, 23 and 24 shall be performed once per day during normal daylight operations when exhausting to the atmosphere. A trained employee shall record whether emissions are normal or abnormal.
- (b) For processes operated continuously, "normal" means those conditions prevailing, or expected to prevail, eighty percent (80%) of the time the process is in operation, not counting startup or shut down time.
- (c) In the case of batch or discontinuous operations, readings shall be taken during that part of the operation that would normally be expected to cause the greatest emissions.
- (d) A trained employee is an employee who has worked at the plant at least one (1) month and has been trained in the appearance and characteristics of normal visible emissions for that specific process.
- (e) The Compliance Response Plan for this unit shall contain troubleshooting contingency and response steps for when an abnormal emission is observed. Failure to take response steps in accordance with Section C - Compliance Monitoring Plan - Failure to Take Response Steps, shall be considered a deviation from this permit.
- (f) The Permittee shall take response actions anytime that there is an abnormal visible emission from control devices or high level of material on cyclones.

D.8.15 Parametric Monitoring

- (a) The Permittee shall record the total static pressure drop across the bag houses used in conjunction with the associated processes, at least once per day when the associated processes are in operation when venting to the atmosphere. When for any one reading, the pressure drop across the baghouse is outside the normal range of 1.0 and 6.0 inches of water or a range established during the latest stack test the Permittee shall take reasonable response steps in accordance with Section C Compliance Response Plan Preparation, Implementation, Records, and Reports. A pressure reading that is outside the above mentioned range is not a deviation from this permit. Failure to take response steps in accordance with Section C Compliance Response Plan Preparation, Implementation, Records, and Reports, shall be considered a deviation from this permit.

The instrument used for determining the pressure shall comply with Section C - Pressure Gauge and Other Instrument Specifications, of this permit, shall be subject to approval by IDEM, OAQ, and shall be calibrated at least once every six (6) months.

- (b) The Permittee shall take response actions anytime that there is an abnormal reading of

pressure drop from baghouses.

D.8.16 Baghouse Inspections

An inspection shall be performed once each year of all bags controlling the associated processes when venting to the atmosphere. All defective bags shall be replaced.

D.8.17 Broken or Failed Bag Detection

In the event that bag failure has been observed:

- (a) For multi-compartment units, the affected compartments will be shut down immediately until the failed units have been repaired or replaced. Operations may continue only if there are no visible emissions or if the event qualifies as an emergency and the Permittee satisfies the emergency provisions of this permit (Section B- Emergency Provisions). Within eight (8) business hours of the determination of failure, response steps according to the timetable described in the Compliance Response Plan shall be initiated. For any failure with corresponding response steps and timetable not described in the Compliance Response Plan, response steps shall be devised within eight (8) business hours of discovery of the failure and shall include a timetable for completion. Failure to take response steps in accordance with Section C - Compliance Response Plan Preparation, Implementation, Records, and Reports, shall be considered a deviation from this permit.
- (b) For single compartment bag houses, failed units and the associated process will be shut down immediately until the failed units have been repaired or replaced. Operations may continue only if the event qualifies as an emergency and the Permittee satisfies the requirements of the emergency provisions of this permit (Section B - Emergency Provisions).

D.8.18 Cyclone Inspections

An inspection shall be performed once each year of all cyclones controlling the associated processes when venting to the atmosphere. Inspections are optional when venting to the in doors.

D.8.19 Cyclone Failure Detection

In the event that cyclone failure has been observed: Failed units and the associated process will be shut down immediately until the failed units have been repaired or replaced. Operations may continue only if the event qualifies as an emergency and the Permittee satisfies the requirements of the emergency provisions of this permit (Section B - Emergency Provisions). Failure to take response steps in accordance with Section C - Compliance Response Plan Preparation, Implementation, Records, and Reports, shall be considered a deviation from this permit.

D.8.20 VOC Monitoring

In order to demonstrate compliance with Conditions D.8.4 and D.8.8, the following monitoring requirements apply:

- (a) The Permittee shall monitor and record the mineral oil flow rate at least once per day. The Preventive Maintenance Plan for the absorber shall contain troubleshooting contingency and corrective actions for when the flow rate readings are outside of the normal range for any one reading.
- (b) The instruments used for determining the flow rate shall be subject to approval by IDEM, OAQ, and shall be calibrated at least once every six (6) months.
- (c) The gauge employed to take the mineral oil flow across the scrubber shall have a scale such that the expected normal reading shall be no less than 20 percent of full scale and be accurate within + 10% of full scale reading. The instrument shall be quality assured and maintained as specified by the vendor.

- (d) In the event that the absorber's failure has been observed, an inspection will be conducted. Based upon the findings of the inspection, any corrective actions will be devised within eight (8) hours of discovery and will include a timetable for completion.
- (e) The operating temperatures of the mineral oil absorber shall be established in the Compliance Monitoring Plan. When the process is in operation, an electronic data management system (EDMS) shall record the instantaneous temperature on a frequency of not less than every two hours. As an alternate to installing an EDMS, manual readings shall be taken every two hours.
- (f) The mineral oil to the mineral-oil-stripping column shall be kept at a minimum temperature of 180°F for adequate stripping of the absorbed hexane from the oil. When the process is in operation, an electronic data management system (EDMS) shall record the instantaneous temperature on a frequency of not less than every two hours. As an alternate to installing an EDMS, manual readings shall be taken every two hours.

D.8.21 Opacity Monitoring [326 IAC 12] [40 CFR 60, Subpart Db]

Pursuant to 40 CFR 60.48b (a), Subpart Db, the following requirements shall be met:

- (a) The continuous monitoring system shall be operated and data recorded during all periods of operation of the boiler no. 2 during the times in which fuel oil no. 2 is combusted only except for continuous monitoring system breakdowns and repairs. Data shall be recorded during calibration checks, and zero and span adjustments.
- (b) The procedures under 40 CFR 60.13 shall be followed for installation, evaluation, and operation of the continuous monitoring systems.

D.8.22 Nitrogen Oxides (NOx) Monitoring [326 IAC 12] [40 CFR 60, Subpart Db]

Pursuant to 40 CFR 60.48b (b), (c), (d), and (e), the following requirements shall be met:

- (a) The Permittee shall install, calibrate, maintain, and operate a continuous monitoring system for measuring nitrogen oxides emissions discharged to the atmosphere from the boiler no. 2, and record the output of the system.
- (b) The continuous monitoring system shall be operated and data recorded during all periods of operation of the boiler no. 2 except for continuous monitoring system breakdowns and repairs. Data shall be recorded during calibration checks, and zero and span adjustments.
- (c) The 1-hour average nitrogen oxides emission rates measured by the continuous nitrogen oxides monitor shall be expressed in ng/J or lb/million Btu heat input and shall be used to calculate the average emission rates. The 1-hour averages shall be calculated using the data points required under 40 CFR 60.13 (b). At least two data points must be used to calculate each 1-hour average.
- (d) The procedures under 40 CFR 60.13 shall be followed for installation, evaluation, and operation of the continuous monitoring systems. The span value for natural gas combustion, the nitrogen oxides span values shall be 500 ppm. All span values shall be rounded to the nearest 500 ppm.
- (e) When nitrogen oxides emission data are not obtained because of continuous monitoring system break-downs, repairs, calibration checks and zero and span adjustments, emission data will be obtained by using standby monitoring systems, Method 7, Method 7A, or other approved reference methods to provide emission data for a minimum of 75 percent of the operating hours in each steam generating unit operating day, in at least 22 out of 30 successive steam generating unit operating days.

or

In the event Bunge decides to meet the nitrogen oxides limit through 40 CFR 60.48b(g), the established parameter shall be monitored to provide emission data for a minimum of 75 percent of the operating hours in each steam generating unit operating day, in at least 22 out of 30 successive steam generating unit operating days.

Record Keeping and Reporting Requirements [326 IAC 2-7-5(3)] [326 IAC 2-7-19]

D.8.23 Record Keeping Requirements

Pursuant to 326 IAC 2-1-3(i) and 326 IAC 2-2:

- (a) The Permittee shall maintain records of the soybean processed by B-Plant and fuel oil #2 burned in boiler #2.
- (b) The Permittee shall maintain records of the opacity, and NOx emissions of the boiler no. 2 as required in 40 CFR 60.49b(f), and (g) respectively.
- (c) The Permittee shall maintain records of the sulfur content in fuel oil #2 burned in boiler #2.
- (d) The Permittee shall maintain records from combined plants "A" and "B" of the following:
 - (1) The amount of VOC (hexane) used per calendar month by the combined plants "A" and "B";
 - (2) The amounts of soybean processed by the combined plants "A" and "B"; and
 - (3) The gallons of hexane used per ton of soybean processed by the combined plants "A" and "B"
- (e) The Permittee shall maintain records of the following:
 - (1) Equipment inspected;
 - (2) Date of inspection; and
 - (3) Determination of whether a leak was detected.

If a leak is detected, the Permittee shall record the following information.

- (A) The equipment, operator, and instrument identification number;
- (B) Measured concentration;
- (C) Leak identification number associated with the corresponding tag;
- (D) Date of repair;
- (E) Reason for non-repair if unable to repair within 5 to 15 days of detection;
- (F) Maintenance recheck if repaired-date, concentration, background, and
- (G) Any appropriate comments.

- (f) Pursuant to 40 CFR Part 63, Subpart GGGG, the Permittee shall maintain records of the following:
 - (1) For the first twelve months, record the items in paragraphs 40 CFR 63.2862(c)(1) through (c)(3).
 - (2) After the source has processed soybeans for 12 operating months, and the source is not operating during an initial startup period as described in 40 CFR 63.2850(c)(2) or (d)(2), or a malfunction period as described in 40 CFR 63.2850(e)(2), record the items in 40 CFR 63.2862(d)(1) through (5) by the end of calendar month following each operating month.
 - (3) For each event subject to an initial startup period as described in 40 CFR 63.2850(c)(2) or (d)(2), or a malfunction period as described in 40 CFR 63.2850(e)(2), record the items in 40 CFR 63.2862(e)(1) through (3).
 - (4) The Permittee shall keep the compliance response plan and SSM plan on-site and readily available as long as the source is operational.
- (g) To document compliance with Condition D.8.18, the Permittee shall maintain records of visible emission notations of the stack exhaust (Pt #1, 4, 5, 16, 17, 18, 19, 20, 21, 22, 23 and 24) once per day.
- (h) The Permittee shall maintain records of the following:
 - (1) Once per day records of the following operational parameters during normal operation when venting to the atmosphere:
 - (A) Inlet and outlet differential static pressure; and
 - (B) Cleaning cycle operation.
- (i) The Permittee shall maintain records of the results of the inspections of baghouses and cyclones.
- (j) The Permittee shall maintain records of the events of the cyclone failure detection and the dates the failed units were repaired or replaced.
- (k) The Permittee shall maintain records of the followings:
 - (1) The daily record of the mineral oil flow rate of the B-plant absorber
 - (2) The events of the B-plant absorber's failure, findings of the inspections subsequent to B-plant absorber's failure, the corrective actions taken, and the time table for completion
 - (3) The operating temperatures of the B-plant mineral oil absorber
 - (4) The temperature of the B-plant mineral oil stripping column
- (l) The Permittee shall maintain records of the opacity monitor data.
- (m) The Permittee shall maintain records of the nitrogen oxides monitor data.
- (n) All records shall be maintained in accordance with Section C - General Record Keeping Requirements, of this permit, and 40 CFR 63.2862.

D.8.24 Reporting Requirements

- (a) A quarterly summary of the information to meet the condition D.8.5(a) and (c) shall be submitted to the address listed in Section C - General Reporting Requirements, of this permit, using the reporting forms located at the end of this permit, or their equivalent, within thirty (30) days after the end of the quarter being reported. The report submitted by the Permittee does require the certification by the "responsible official" as defined by 326 IAC 2-7-1(34).
- (b) Annual compliance certification -The first annual compliance certification for NESHAP requirements of 40 CFR 63, Part GGGG, is due 12 calendar months after the source submits the notification of compliance status. Each annual compliance certification is due 12 calendar months after the previous annual compliance certification. The annual compliance certification provides the compliance status for each operating month during the 12 calendar months period ending 60 days prior to the date on which the report is due. The report should include the information in paragraphs 40 CFR 63.2661(a)(1) through (6).
- (c) Deviation notification report - Submit a deviation notification report for each determination in which the compliance ratio exceeds 1.0 as determined under 40 CFR 63.2840(c). Submit the deviation report by the end of the month following the calendar month in which you determined the deviation. The deviation notification report must include the items in paragraphs 40 CFR 63.2861(b)(1) through (4).
- (d) Periodic startup, shutdown, and malfunction report - If the source is operating under an initial startup period subject to 40 CFR 63.2850(c)(2) or (d)(2) or a malfunction period subject to 40 CFR 63.2850(e)(2), submit the periodic SSM report by the end of the calendar month following each month in which the initial startup period or malfunction period occurred. The periodic SSM report must include the items in paragraphs 40 CFR 63.2861(c)(1) through (3).
- (e) Intermediate SSM reports - If the source handles a SSM during an initial startup period subject to 40 CFR 63.2850(c)(2) or (d)(2) or a malfunction period subject to 40 CFR 63.2850(e)(2) differently from procedures in SSM plan, then submit an immediate SSM report Intermediate reports consists of a telephone call or facsimile transmission to the responsible agency within 2 working days after starting actions consistent with the SSM plan, followed by a letter within 7 working days after the end of the event. The letter must include the items in 40CFR 63.2861(d)(1) through (3).
- (f) Pursuant to 326 IAC 7-2-(a)(3), the applicant shall submit reports of calendar month for annual average sulfur content or sulfur dioxide rate in pounds per million Btu, heat content, fuel consumption upon request to the Office of Air Quality.
- (g) The Permittee shall report the data of the opacity and NOx emissions as required in 40 CFR 60.49b.

SECTION D.9

FACILITY CONDITIONS

Facility Description [326 IAC 2-7-5(15)]: Insignificant Activities

- (a) Blowdown for any of the following: sight glass; boiler; compressors; pumps; and cooling tower;
- (b) Replacement or repair of electrostatic precipitators, bags in baghouses and filters in other air filtration equipment;
- (c) Emission units with PM and PM10 emissions less than five (5) tons per year, SO₂, NO_x, and VOC emissions less than ten (10) tons per year, CO emissions less than twenty-five (25) tons per year, lead emissions less than two-tenths (0.2) tons per year, single HAP emissions less than one (1) ton per year, and combination of HAPs emissions less than two and a half (2.5) tons per year:
 - (1) One (1) #2 fuel oil storage tank, identified as #4, with a capacity of 3,958 cubic feet;
 - (2) One (1) soybean oil storage tank, identified as #6, with a capacity of 38,000 cubic feet;
 - (3) One (1) soybean oil storage tank, identified as #7, with a capacity of 38,000 cubic feet; and
 - (4) One (1) #2 fuel oil storage tank, identified as #10, with a capacity of 3,958 cubic feet.

(The information describing the process contained in this facility description box is descriptive information and does not constitute enforceable conditions.)

Emission Limitations and Standards [326 IAC 2-7-5(1)]

D.9.1 Particulate Emissions Limitations [40 CFR 52, Subpart P] [326 IAC 6-3-2]

- (a) Pursuant to 40 CFR 52, Subpart P, the allowable particulate emissions rate from any process not already regulated by 326 IAC 6-1 or any New Source Performance Standard, and which has a maximum process weight rate less than 100 pounds per hour shall not exceed 0.551 pounds per hour. The following insignificant activities are subject to this rule: blowdown for any of the following: sight glass; boiler; compressors; pumps; and cooling tower; and replacement or repair of electrostatic precipitators, bags in baghouses and filters in other air filtration equipment.
- (b) Pursuant to 326 IAC 6-3-2(e)(2), the allowable particulate emissions rate from any process not exempt under 326 IAC 6-3-1(b) or (c) which has a maximum process weight rate less than 100 pounds per hour shall not exceed 0.551 pounds per hour. This condition is not federally enforceable. The following insignificant activities are subject to this rule: blowdown for any of the following: sight glass; boiler; compressors; pumps; and cooling tower; and replacement or repair of electrostatic precipitators, bags in baghouses and filters in other air filtration equipment.

D.9.2 Storage Tanks [326 IAC 12]

326 IAC 12 is applicable to the fuel oil storage tanks #4 and #10 and the soybean oil storage tanks #6 and #7. Pursuant to this rule, no specific emissions limitations or standards apply, but record keeping requirements are listed in the Record Keeping portion of this Section.

Record Keeping and Reporting Requirements [326 IAC 2-7-5(3)] [326 IAC 2-7-19]

D.9.3 Record Keeping Requirements [326 IAC 12]

Pursuant to 326 IAC 12, as of July 1, 2000, the Permittee shall maintain readily available records showing the dimensions of the storage tanks and an analysis showing the capacity of the storage tanks. Additionally, for storage tanks #4, #6, #7, and #10, the Administrator shall be notified within 30 days when the maximum true vapor pressure of the liquid exceeds the respective maximum true vapor pressure value for each volume range.

Indiana Department of Environmental Management Office of Air Quality

Addendum to the Technical Support Document for a Significant Permit Modification to a Part 70 Operating Permit

Source Background and Description

Source Name:	Bunge North America (East), Inc.
Source Location:	700 North Rangeline Road, Morristown, Indiana 46161
County:	Shelby
SIC Code:	4911
Operation Permit No.:	T145 -9004-00035
Operation Permit Issuance Date:	June 29, 2004
Significant Source Modification No.:	145 -21206 -00035
Significant Permit Modification No.:	145 -21327 -00035
Permit Reviewer:	LStapf

On June 10, 2005, the Office of Air Quality (OAQ) had a notice published in the local newspaper in Shelby County, stating that Bunge North America (East), Inc. (Bunge) had applied for a Significant Permit Modification to an operating permit to be able to replace some existing pellet mill equipment with a new pellet mill, pellet cooler and high efficiency cyclone with fan in order to increase the current process rate. The notice also stated that OAQ proposed to issue a permit for this operation and provided information on how the public could review the proposed permit and other documentation. Finally, the notice informed interested parties that there was a period of thirty (30) days to provide comments on whether or not this permit should be issued as proposed.

On July 8, 2005, Bunge submitted comments on the proposed Significant Permit Modification. Comments were accepted from John Gibbons of Bunge. The summary of the comments is as follows. **Bold** text has been added while text with a line through it has been ~~deleted~~. The Table of Contents of the permit was updated as needed.

Comment 1:

“Section D.6 – Facility Description (q): One (1) pelletizing/~~extruding~~ mill, raw material per hour (18 tph) ~~using a cyclone control device with a rating of 0.01 gr/dscf and 7,500 acfm at stack #26.~~ Please remove the lined-out items.”

Response to Comment 1:

The process flow diagram in the application and a conversation with the source has shown that the air from the pelletizing mill goes directly to the next piece of equipment labeled the pellet cooler. IDEM OAQ agrees that the description should not include the cyclone when referring about the pelletizing mill. Therefore, the description has been modified as follows:

SECTION D.6

FACILITY CONDITIONS

Facility Description [326 IAC 2-7-5(15)]:

- (q) One (1) pelletizing/~~extruding~~ mill, labeled as part of EU# 26, with a maximum rate of 36,000 lbs raw material per hour (18 tph), ~~using a cyclone control device with a rating of 0.01 grains/dscf and 7,500 acfm at stack Pt#26.~~ **where air stream from mill does not vent to atmosphere but instead passes on to pellet cooler;**
- (r) One (1) pellet cooler, labeled as part of EU# 26, with a maximum rate of 36,000 lbs raw material per hour (18 tph), using a high efficiency cyclone control device with a rating of 0.01 grains/dscf and 7,500 acfm at stack Pt#26;
- (s) One (1) totally enclosed drag conveyor, with a maximum rate of 15 tons per hour;
- (t) One (1) totally enclosed "L" path conveyor, with a maximum rate of 15 tons per hour; and
- (u) One (1) bucket leg, with a maximum rate of 15 tons per hour.

(The information describing the process contained in this facility description box is descriptive information and does not constitute enforceable conditions.)

D.6.4 Particulate Control

In order to comply with D.6.1 and D.6.2, the cyclone for particulate control shall be in operation and control emissions from the **Pellet Cooler** ~~eyelone~~ at all times that the **Pellet Mill/Cooler process Cooling Line is** are in operation.

Comment 2:

"Section D.6.1- Particulate Emission Limitations: the process weight rate of 26,000 pounds per hour needs to be changed to 36,000 pounds per hour."

Response to Comment 2:

There is a typographical error: "26,000" should be "36,000" based on the process rate of 18 tph. The text will be revised. The emission limitation of 28.4 lbs / hour is still consistent with the formula and process rate. The text shall be revised as follows:

Emission Limitations and Standards [326 IAC 2-7-5(1)]

D.6.1 Particulate Emissions Limitations [326 IAC 6-3-2] [40 CFR 52.21, Part P]

Pursuant to 326 IAC 6-3-2 the Particulate emissions from the Pellet Cooling facility shall be limited to 28.4 pounds per hour at a process weight rate of ~~26,000~~ **36,000** pounds per hour:

The pounds per hour limitation was calculated with the following equation:

Interpolation of the data for the process weight rate up to 60,000 pounds per hour shall be accomplished by use of the equation:

$$E = 4.10 P^{0.67}$$

where E = rate of emission in pounds per hour; and
P = process weight rate in tons per hour

Comment 3:

"Section D.6.2 – PSD Minor Limit:

- a. the section lists the PM and PM10 emission limits as 2.73 and 1.36 lb/hr, respectively. The correct emission limits are '2.74 (PM)' and '1.37 (PM10)' lb/hr. The difference is caused by rounding error.
- b. In the second paragraph, please change 'Cooling Line' to 'Cooler'."

Response to Comment 3:

The text will be revised as follows:

D.6.2 PSD Minor Limit [326 IAC 2-2]

Pursuant to 326 IAC 2-2 the Particulate Matter (PM) and particulate matter with aerodynamic diameter less than ten (10) micrometers (PM₁₀) emissions from the emission unit, EU#26 shall be limited to ~~2.73~~ **2.74** and ~~1.36~~ **1.37** lbs/hour, respectively.

Compliance with this **condition is necessary in order to** emission limit is equivalent to emissions of **to** less than 25 tons/year PM and less than 15 tons/year PM₁₀ and will render the requirements of ~~326~~ **26** IAC 2-2 not applicable to the Pellet Mill and ~~Cooling Line~~ **Cooler** emission unit, EU#26.

Comment 4:

"**Section D.6.7 – Cyclone Inspections:** change 'Pellet Cooling' process to 'Pellet Mill/Cooler' process. "

Response to Comment 4:

The text shall be revised as follows:

D.6.4 Particulate Control

In order to comply with D.6.1 and D.6.2, the cyclone for particulate control shall be in operation and control emissions from the **Pellet Cooler** cyclone at all times that the **Pellet Mill/Cooler process** ~~Cooling Line~~ **is** are in operation.

...

D.6.7 Cyclone Inspections

An external inspection shall be performed each ~~calendar~~ **calendar** quarter and an internal inspection shall be performed each ~~calendar~~ **calendar** year of the cyclone controlling the Pellet **Mill /Cooling Line** **Cooler** process. Inspections required by this condition shall not be performed during consecutive months.

Comment 5:

"**Section D.6.8(a) – Recordkeeping Requirements:** change 'once per shift' to 'once per day'. "

Response to Comment 5:

The OAQ has determined that the frequency of monitoring can be changed from once per shift to once per day and the source will still demonstrate compliance with the applicable provisions. Therefore, Conditions D.6.6 and D.6.8 have been revised to require daily rather than once per shift visible emissions notations:

Compliance Monitoring Requirements [326 IAC 2-7-6(1)] [326 IAC 2-7-5(1)]

D.6.6 Visible Emissions Notations

- (a) Once per day visible emission notations of the Pellet Cooler stack exhaust shall be performed during normal daylight operations when exhausting to the atmosphere. A trained employee shall record whether emissions are normal or abnormal.

...

D.6.8 Record Keeping Requirements

- (a) To document compliance with Condition D.6.6, the Permittee shall maintain records of visible emission notations of the Pellet Cooling stack exhaust once per **day** ~~shift~~.

Comment 6:

“Section D.6.8(b) – Recordkeeping Requirements: Bunge would like further explanation on what is meant by the statement ‘the dates the vents are redirected’. This phrase seems to be out of place.”

Response to Comment 6:

IDEM OAQ normally includes the phrase ‘the dates the vents are redirected’ to refer to a baghouse that can sometimes exhaust inside and sometimes outside. The Permittee proposes the use of a cyclone that will always exhaust outside of the building through stack #26. Therefore the phrase referring to ‘the dates the vents are redirected’ has been deleted. Section D.6.8 shall be revised as follows:

D.6.8 Record Keeping Requirements

- (a) To document compliance with Condition D.6.6, the Permittee shall maintain records of visible emission notations of the Pellet Cooling stack exhaust once per **day** ~~shift~~.
- (b) To document compliance with Condition D.6.7, the Permittee shall maintain records of the results of the inspections required under Condition D.6.7. ~~and dates that the vents are redirected.~~
- (c) All records shall be maintained in accordance with Section C - General Record Keeping Requirements, of this permit.

Comment 7:

“Any changes already made in the Permit need to also be made in the Technical Source Document.”

Response to Comment 7:

IDEM OAQ will not revise the historical Technical Support Document. The changes required shall be reflected in the addendum to the TSD.

Comment 8:

“History: Bunge is now operating under the Stay Agreement between Bunge North America (East), Inc. and IDEM – Exhibit A: Stay for T145-9004-00035 issued on June 1, 2005. This reference should be made in the TSD.”

Response to Comment 8:

Please refer to Response to Comment 7 and 9.

Comment 9:

“Changes Proposed to Title V Permit (starting on Page 7 of 10): Exhibit A of the Appeal resolution needs to be reviewed to ensure that the changes to the Title V proposed in this TSD document are consistent.

- a. **Facility Description (q):** make the same changes listed in Comment #1 above.

- b. Section D.6 – Facility Description (q):** make the same changes listed in Comment #1 above.
- c. Section D.6.1 – Particulate Emissions Limitations:** make the same changes listed in Comment #2 above.
- d. Section D.6.2 – PSD Minor Limit:** make the same changes listed in Comment #3 above.
- e. Section D.6.7 – Cyclone Inspections:** make the same changes listed in Comment #4 above.
- f. Section D.6.8(a) – Recordkeeping Requirements:** make the same changes listed in Comment #5 above.
- g. Section D.6.8(b) – Recordkeeping Requirements:** make the same changes listed in Comment #6 above. “

Response to Comment 9:

This permit modification 145-21327-00035 is expected to be issued as final well before the appeal resolution is issued final under 145-19796-00035. Because the appeal resolution is not final, those changes agreed upon may not be placed in this permit modification. Further, this permit modification is limited to only the equipment listed in Condition D.6 of the operating permit. If the resolution is released after this permit modification, the appeal resolution may incorporate the Condition D.6 changes summarized here.

Comment 10:

“**Appendix A:** Why is ‘Enclosed Hull Handling Conveyor’ and ‘Pellet ‘L’ Conveyor & Storage’ listed in the Appendix A tables? These conveyors are not new but are existing. It seems unnecessary to show them in the table especially since they don’t have any emissions. Do you agree? “

Response to Comment 10:

Appendix A is part of the historical TSD and the IDEM OAQ documents here in the Addendum to the TSD that the ‘Enclosed Hull Handling Conveyor’ and ‘Pellet ‘L’ Conveyor & Storage’ operations are not modified under this SSM 145-21206-00035 and SPM 145-21327-00035.

Changes:

In general, the TSD is not to be modified and re-issued. The TSD is a historical document and reference. Those necessary changes to the TSD are noted in this addendum.

There is an error in the TSD section entitled ‘Justification for Modification’ referring to a minor permit modification. This is a significant permit modification. The TSD section should read as follows:

“The significant source modification (145-21206-00035) will be incorporated into the Part 70 permit (145-9004-00035) through **significant** ~~minor~~ permit modification (145-21327-00035) for the source to operate the new emission unit.”

**Indiana Department of Environmental Management
Office of Air Quality**

**Technical Support Document (TSD)
Significant Source Modification and
Significant Permit Modification to a Part 70 Operating Permit**

Source Background and Description

Source Name:	Bunge North America (East), LLC
Source Address:	700 N. Rangeline Road, Morristown, Indiana 46161
SIC Code:	2075, 2079
County Location:	Shelby
Source Location Status:	Non-attainment for 8-hour ozone; attainment for PM _{2.5} ; Attainment or unclassified for all remaining criteria pollutants
Operation Permit No.:	T145-9004-00035, issued on June 29, 2004
First Significant Source Modification No.:	145-21206-00035
First Significant Permit Modification No.:	145-21327-00035
Permit Writer:	LStapf
Source Status:	Part 70 Permit Program Major Source under Non-attainment NSR Rules Major Source under Attainment PSD Rules Major Source, Section 112 of the Clean Air Act Not one of the 28 listed source categories

History

On May 16, 2005, the Office of Air Quality (OAQ) received an application for a significant source modification and a significant permit modification from Bunge North America (East), LLC to be able to replace an existing pellet mill with a new unit with increased capacity. This project is labeled the "Pellet Mill/Cooler Project".

The source is currently permitted under Part 70 Permit T145-9004-00035, issued on June 29, 2004.

New Emission Units and Pollution Control Equipment

The source consists of the following permitted emission units and pollution control devices:

- (a) One (1) pelletizing/extruding mill, labeled as part of EU# 26, with a maximum rate of 36,000 lbs raw material per hour (18 tph), using a cyclone control device with a rating of 0.01 grains/dscf and 7,500 acfm at stack Pt#26.
- (b) One (1) pellet cooler, labeled as part of EU# 26, with a maximum rate of 36,000 lbs raw material per hour (18 tph), using a high efficiency cyclone control device with a rating of 0.01 grains/dscf and 7,500 acfm at stack Pt#26.

Enforcement Issues

There are no enforcement issues for this source.

Recommendation

The staff recommends to the Commissioner that this Significant Source Modification and Significant Permit Modification be approved. This recommendation is based on the following facts and conditions:

Unless otherwise stated, information used in this review was derived from the application and additional information submitted by the applicant.

An application for the purposes of this review was received on May 16, 2005.

Emission Calculations

The source provided calculations are provided in Appendix A of this document (Appendix A, page 1.)

Potential To Emit of Modification Before Controls

Pursuant to 326 IAC 2-1.1-1(16), Potential to Emit is defined as “the maximum capacity of a stationary source or emissions unit to emit any air pollutant under its physical and operational design. Any physical or operational limitation on the capacity of a source to emit an air pollutant, including air pollution control equipment and restrictions on hours of operation or type or amount of material combusted, stored, or processed shall be treated as part of its design if the limitation is enforceable by the U.S. EPA, the department, or the appropriate local air pollution control agency.”

This table reflects the PTE before controls for the modification. Control equipment is not federally enforceable until it has been required in a federally enforceable permit.

Pollutant	Potential to Emit (tons/yr)
PM	239
PM ₁₀	120
SO ₂	0
VOC	0
CO	0
NO _x	0
Single highest HAP	0
Total HAPs	0

Justification for Modification

This modification is being performed pursuant to 326 IAC 2-7-10.5(f)(4)(A) because this emission unit has the potential to emit more than 25 tons per year of particulate matter (PM) or particulate matter with aerodynamic diameter less than or equal to ten (10) micrometers (PM₁₀). Therefore, the Title V permit is being modified through a Significant Permit Modification pursuant to 326 IAC 2-7-12(d).

The Significant Source Modification (145-21206-00035) will be incorporated into the Part 70 permit (145-9004-00035) through Minor Permit Modification (145-21327-00035) for the source to operate the new emission unit.

County Attainment Status

The source is located in Shelby County.

County Attainment Status	
Pollutant	Status
PM ₁₀	Attainment
PM _{2.5}	Attainment
SO ₂	Attainment
NO ₂	Attainment
1-Hour Ozone	Attainment
8-Hour Ozone	Non-Attainment
CO	Attainment

- (a) Shelby County has been classified as non-attainment 8-hour ozone (effective April 30, 2004). Therefore, volatile organic compound (VOC) and oxides of nitrogen (NO_x) emissions were reviewed pursuant to the requirements for Emission Offset, 326 IAC 2-3.
- (b) Shelby County has been classified as attainment or unclassifiable for PM₁₀, SO₂, NO₂, CO, 1 hour ozone, and lead. Therefore, these emissions were reviewed pursuant to the requirements for Prevention of Significant Deterioration (PSD), 326 IAC 2-2. See the State Rule Applicability for the source section.
- (d) Shelby County has been classified as attainment for PM_{2.5} (effective April 5, 2005). U.S. EPA has not yet established the requirements for Prevention of Significant Deterioration (PSD), 326 IAC 2-2 for PM_{2.5} emissions. Therefore, until the U.S.EPA adopts specific provisions for PSD review for PM_{2.5} emissions, it has directed states to regulate PM₁₀ emissions as surrogate for PM_{2.5} emissions. Therefore, these proposed increases in particulate matter emissions were reviewed pursuant to the requirements for Prevention of Significant Deterioration (PSD), 326 IAC 2-2.

Source Status

The existing source PSD and Emission Offset (emissions after controls, based on 8,760 hours of operation per year at rated capacity and/or as otherwise limited):

Pollutant	Emissions (ton/year)
PM	Greater than 250
PM ₁₀	Greater than 250
SO ₂	Less than 250
NO _x	Less than 250
VOC	Greater than 100
CO	Less than 250

The source is a major stationary source for non-attainment NSR (Emission Offset) because VOC as a precursor to ozone is emitted at a rate of more than 100 tons per year. The source is not one of the 28 listed source categories. The existing source is a major stationary source for PSD purposes because at least one of the attainment pollutants is emitted at a rate of greater than 250 tons per year.

Potential to Emit of Modification after Issuance

The table below summarizes the emissions from the modification after controls, reflecting all limits, of the emission unit. Any control equipment is considered enforceable only after issuance of the original Part 70 Operating permit and only to the extent that the effect of the control equipment is made practically enforceable in the permit.

Process/emission unit	Potential to Emit (tons/year)	
	PM	PM ₁₀
Controlled Emissions from EU#26	12.0	6.0
Significance Level	25	15

This modification to an existing major stationary source is not major because the PM and PM₁₀ emissions increases due to the modification are less than the PSD significant levels. Therefore, pursuant to 326 IAC 2-2, the PSD requirements do not apply to this modification.

Federal Rule Applicability

- (a) 40 CFR 64 Compliance Assurance Monitoring
This significant modification does involve a pollutant-specific emissions unit as defined in 40 CFR 64.1 for particulate mater (PM₁₀):
- (1) with the potential to emit before controls equal to or greater than the major source threshold for particulate mater (PM₁₀)
 - (2) that is subject to an emission limitation or standard for particulate mater (PM₁₀), and
 - (3) uses a control device as defined in 40CFR Part 64.1 to comply with that emission limitation or standard.

Therefore, the requirements of 40 CFR Part 64, Compliance Assurance Monitoring, are applicable to this modification.

The pollutant-specific emission unit is not a "large unit" as described in 40 CFR 64.5. Therefore, the owner or operator shall submit a CAM plan pursuant to 40 CFR 64 as part of the Part 70 renewal application.

- (b) There are no New Source Performance Standards (NSPS) (326 IAC 12 and 40 CFR Part 60) included in this permit modification. Specifically, 40 CFR 60, Subpart DD (Standards of Performance for Grain Elevators) does not apply to this modification of this source, because the emission units are not part of the grain elevator.
- (c) There are no National Emission Standards for Hazardous Air Pollutants (NESHAP) (326 IAC 14, 20 and 40 CFR Part 61, 63) included in this permit modification. Specifically, 40 CFR 63, Subpart GGGG (National Emission Standards for Hazardous Air Pollutants: Solvent Extraction for Vegetable Oil Production) does not apply to this modification of this source, because no HAPs are emitted from the emission unit.

State Rule Applicability - Individual Facilities

326 IAC 2-2 (Prevention of Significant Deterioration)

This existing source is a major source for PSD. Pursuant to 326 2-2-2(d), this modification is not a major PSD modification because it does not cause a significant emission increase. The applicant has stated that the actual-to-projected-actual applicability test indicates that the modification to the source will not exceed the significance level for particulate matter (PM) or for particulate matter with aerodynamic diameter less than or equal to ten (10) micrometers (PM₁₀). This project will be minor for PSD through issuance of a PSD Minor Limit for PM and PM₁₀. The Minor Limit shall be demonstrated through the following record keeping requirements:

1. Records of all required monitoring data, reports and support information required by this permit shall be retained for a period of at least five (5) years from the date of monitoring sample, measurement, report, or application. These records shall be physically present or electronically accessible at the source location for a minimum of three (3) years. The records may be stored elsewhere for the remaining two (2) years as long as they are available upon request. If the Commissioner makes a request for records to the Permittee, the Permittee shall furnish the records to the Commissioner within a reasonable time.
2. Unless otherwise specified in this permit, all record keeping requirements not already legally required shall be implemented within ninety (90) days of permit issuance.
3. If there is a reasonable possibility that a "project" (as defined in 326 IAC 2-2-1 (qq) and/or 326 IAC 2-3-1 (ll)) at an existing emissions unit, other than projects at a Clean Unit, which is not part of a "major modification" (as defined in 326 IAC 2-2-1 (ee) and/or 326 IAC 2-3-1 (z)) may result in significant emissions increase and the Permittee elects to utilize the "projected actual emissions" (as defined in 326 IAC 2-2-1 (rr) and/or 326 IAC 2-3-1 (mm)), the Permittee shall comply with following:
 - (a) Prior to commencing the construction of the "project" (as defined in 326 IAC 2-2-1 (qq) and/or 326 IAC 2-3-1 (ll)) at an existing emissions unit, document and maintain the following records:
 - (1) A description of the project.
 - (2) Identification of any emissions unit whose emissions of a regulated new source review pollutant could be affected by the project.
 - (3) A description of the applicability test used to determine that the project is not a major modification for any regulated NSR pollutant, including:
 - (A) Baseline actual emissions;
 - (B) Projected actual emissions;
 - (C) Amount of emissions excluded under section 326 IAC 2-2-1(rr)(2)(A)(iii) and/or 326 IAC 2-3-1(mm)(2)(A)(3); and
 - (D) An explanation for why the amount was excluded, and any netting calculations, if applicable.
 - (b) Monitor the emissions of any regulated NSR pollutant that could increase as a result of the project and that is emitted by any existing emissions unit identified in (1)(B) above; and
 - (c) Calculate and maintain a record of the annual emissions, in tons per year on a calendar year basis, for a period of five (5) years following resumption of regular operations after the change, or for a period of ten (10) years following resumption of regular operations after the change if the project increases the design capacity of or the potential to emit that regulated NSR pollutant at the emissions unit.

326 IAC 5-1 (Opacity Limitations)

Pursuant to 326 IAC 5-1-2 (Opacity Limitations), except as provided in 326 IAC 5-1-3 (Temporary Exemptions), opacity shall meet the following, unless otherwise stated in the permit:

1. Opacity shall not exceed an average of forty percent (40%) in any one (1) six (6) minute averaging period as determined in 326 IAC 5-1-4.
2. Opacity shall not exceed sixty percent (60%) for more than a cumulative total of fifteen (15) minutes (sixty (60) readings as measured according to 40 CFR 60, Appendix A, Method 9 or fifteen (15) one (1) minute nonoverlapping integrated averages for a continuous opacity monitor) in a six (6) hour period.

40 CFR 52 Subpart P (Particulate Emissions Limitations for Manufacturing Processes)

Pursuant to 40 CFR 52.21 Subpart P, the Particulate Matter emissions from the Pellet Cooling facility shall be limited to 28.4 pounds per hour at a process weight rate of 36,000 pounds per hour (18 tph):

The pounds per hour limitation was calculated with the following equation:

Interpolation of the data for the process weight rate up to 60,000 pounds per hour shall be accomplished by use of the equation:

$$E = 4.10 P^{0.67} \quad \text{where } E = \text{rate of emission in pounds per hour; and} \\ P = \text{process weight rate in tons per hour}$$

Testing Requirements

The emission unit, EU#26, consisting of the existing and new equipment, will be stack tested for particulate matter (PM) and for particulate matter with aerodynamic diameter less than ten (10) micrometers (PM_{10}), because the high efficiency cyclone control device is used to comply with the PM and PM_{10} emissions limit.

Compliance Requirements

Permits issued under 326 IAC 2-7 are required to ensure that sources can demonstrate compliance with applicable state and federal rules on a more or less continuous basis. All state and federal rules contain compliance provisions, however, these provisions do not always fulfill the requirement for a more or less continuous demonstration. When this occurs IDEM, OAQ, in conjunction with the source, must develop specific conditions to satisfy 326 IAC 2-7-5. As a result, compliance requirements are divided into two sections: Compliance Determination Requirements and Compliance Monitoring Requirements.

Compliance Determination Requirements in Section D of the permit are those conditions that are found more or less directly within state and federal rules and the violation of which serves as grounds for enforcement action. If these conditions are not sufficient to demonstrate continuous compliance, they will be supplemented with Compliance Monitoring Requirements, also Section D of the permit. Unlike Compliance Determination Requirements, failure to meet Compliance Monitoring conditions would serve as a trigger for corrective actions and not grounds for enforcement action. However, a violation in relation to a compliance monitoring condition will arise through a source's failure to take the appropriate corrective actions within a specific time period.

The compliance monitoring requirements applicable to this emission unit are as follows:

- (a) Visible emission notations;

- (b) Inspection results;
- (c) Record keeping of the actual-to-projected-actual applicability test; and

Changes Proposed

The following are the proposed changes to the Part 70 Operating Permit T145-9004-00035, issued on June 29, 2004, due to the proposed significant source modification (any changes are shown in **bold** or ~~strikeout~~ fonts for emphasis):

- (1) Section A.2, p. 13, of the Part 70 Permit has been revised as follows:

- ~~(q) One (1) pelletizing/extruding mill, with a maximum rate of 5 tons per hour~~
- (q) One (1) pelletizing/extruding mill, labeled as part of EU# 26, with a maximum rate of 36,000 lbs raw material per hour (18 tph), using a cyclone control device with a rating of 0.01 grains/dscf and 7,500 acfm at stack Pt#26;**
- ~~(r) One (1) pellet cooler, with a maximum rate of 5 tons per hour. This process is controlled by a high efficiency cyclone~~
- (r) One (1) pellet cooler, labeled as part of EU# 26, with a maximum rate of 36,000 lbs raw material per hour (18 tph), using a high efficiency cyclone control device with a rating of 0.01 grains/dscf and 7,500 acfm at stack Pt#26;**

- (3) Section A.2, p. 34-35, of the Part 70 Permit has been revised as follows:

C.19 General Record Keeping Requirements [326 IAC 2-7-5(3)] [326 IAC 2-7-6]

- (a) Records of all required monitoring data, reports and support information required by this permit shall be retained for a period of at least five (5) years from the date of monitoring sample, measurement, report, or application. These records shall be physically present or electronically accessible at the source location for a minimum of three (3) years. The records may be stored elsewhere for the remaining two (2) years as long as they are available upon request. If the Commissioner makes a request for records to the Permittee, the Permittee shall furnish the records to the Commissioner within a reasonable time.
- (b) Unless otherwise specified in this permit, all record keeping requirements not already legally required shall be implemented within ninety (90) days of permit issuance.
- (c) If there is a reasonable possibility that a “project” (as defined in 326 IAC 2-2-1 (qq) and/or 326 IAC 2-3-1 (ll)) at an existing emissions unit, other than projects at a Clean Unit, which is not part of a “major modification” (as defined in 326 IAC 2-2-1 (ee) and/or 326 IAC 2-3-1 (z)) may result in significant emissions increase and the Permittee elects to utilize the “projected actual emissions” (as defined in 326 IAC 2-2-1 (rr) and/or 326 IAC 2-3-1 (mm)), the Permittee shall comply with following:**
 - (1) Prior to commencing the construction of the “project” (as defined in 326 IAC 2-2-1 (qq) and/or 326 IAC 2-3-1 (ll)) at an existing emissions unit, document and maintain the following records:**
 - (A) A description of the project.**
 - (B) Identification of any emissions unit whose emissions of a regulated new source review pollutant could be affected by the project.**

- (C) **A description of the applicability test used to determine that the project is not a major modification for any regulated NSR pollutant, including:**
- (i) **Baseline actual emissions;**
 - (ii) **Projected actual emissions;**
 - (iii) **Amount of emissions excluded under section 326 IAC 2-2-1(rr)(2)(A)(iii) and/or 326 IAC 2-3-1(mm)(2)(A)(3); and**
 - (iv) **An explanation for why the amount was excluded, and any netting calculations, if applicable.**
- (2) **Monitor the emissions of any regulated NSR pollutant that could increase as a result of the project and that is emitted by any existing emissions unit identified in (1)(B) above; and**
- (3) **Calculate and maintain a record of the annual emissions, in tons per year on a calendar year basis, for a period of five (5) years following resumption of regular operations after the change, or for a period of ten (10) years following resumption of regular operations after the change if the project increases the design capacity of or the potential to emit that regulated NSR pollutant at the emissions unit.**

(4) Section D.6, pp. 68-69, of the Part 70 Permit has been revised as follows:

SECTION D.6 FACILITY CONDITIONS

Facility Description [326 IAC 2-7-5(15)]:

- (q) ~~One (1) pelletizing/extruding mill, with a maximum rate of 5 tons per hour~~
(q) One (1) pelletizing/extruding mill, labeled as part of EU# 26, with a maximum rate of 36,000 lbs raw material per hour (18 tph), using a cyclone control device with a rating of 0.01 grains/dscf and 7,500 acfm at stack Pt#26;
- (r) ~~One (1) pellet cooler, with a maximum rate of 5 tons per hour. This process is controlled by a high efficiency cyclone~~
(r) One (1) pellet cooler, labeled as part of EU# 26, with a maximum rate of 36,000 lbs raw material per hour (18 tph), using a high efficiency cyclone control device with a rating of 0.01 grains/dscf and 7,500 acfm at stack Pt#26;
- (.....)

Emission Limitations and Standards [326 IAC 2-7-5(1)]

D.6.1 Particulate Emissions Limitations [326 IAC 6-3-2] [40 CFR 52.21, Part P]

Pursuant to 326 IAC 6-3-2 the Particulate emissions from the Pellet Cooling facility shall be limited to ~~42.05~~**28.4** pounds per hour at a process weight rate of ~~40~~**26,000** pounds per hour:

The pounds per hour limitation was calculated with the following equation:

Interpolation of the data for the process weight rate up to 60,000 pounds per hour shall be accomplished by use of the equation:

$$E = 4.10 P^{0.67}$$

where E = rate of emission in pounds per hour; and

P = process weight rate in tons per hour

D.6.2 PSD Minor Limit [326 IAC 2-2]

Pursuant to 326 IAC 2-2 the Particulate Matter (PM) and particulate matter with aerodynamic diameter less than ten (10) micrometers (PM₁₀) emissions from the emission unit, EU#26 shall be limited to 2.73 and 1.36 lbs/hour, respectively.

Compliance with this emission limit is equivalent to emissions of less than 25 tons/year PM and less than 15 tons/year PM₁₀ and will render the requirements of 26 IAC 2-2 not applicable to the Pellet Mill and Cooling Line emission unit, EU#26.

D.6.23 Preventive Maintenance Plan [326 IAC 2-7-5(13)]

A Preventive Maintenance Plan, in accordance with Section B - Preventive Maintenance Plan, of this permit, is required for this facility and its control device.

Compliance Determination Requirements

D.6.34 Particulate Control

In order to comply with D.6.1 and D.6.2, the cyclone for particulate control shall be in operation and control emissions from the cyclone at all times that the Pellet Cooling Line are in operation. ~~The cyclone shall be in operation at all times when the Pellet Milling / Cooling process is in operation.~~

Testing Requirements

D.6.5 Testing Requirements [326 IAC 2-7-6(1),(6)] [326 IAC 2-1.1-11]

Within 60 days after achieving the maximum production rate for emission unit EU#26 but no later than 180 days after startup of the emission unit, the Permittee shall perform PM and PM₁₀ testing in order to determine compliance with D.6.1 and D.6.2 utilizing methods as approved by the Commissioner, and furnish the Commissioner a written report of the results of such performance tests.

These tests shall be repeated at least once every five (5) years from the date of this valid compliance demonstration. PM₁₀ includes filterable and condensable PM₁₀. Testing shall be conducted in accordance with Section C – Performance Testing.

Compliance Monitoring Requirements [326 IAC 2-7-6(1)] [326 IAC 2-7-5(1)]

D.6.46 Visible Emissions Notations

- (a) Once per day visible emission notations of the Pellet Cooler stack exhaust shall be performed during normal daylight operations when exhausting to the atmosphere. A trained employee shall record whether emissions are normal or abnormal.
- (b) For processes operated continuously, "normal" means those conditions prevailing, or expected to prevail, eighty percent (80%) of the time the process is in operation, not counting startup or shut down time.
- (c) In the case of batch or discontinuous operations, readings shall be taken during that part of the operation that would normally be expected to cause the greatest emissions.
- (d) A trained employee is an employee who has worked at the plant at least one (1) month and has been trained in the appearance and characteristics of normal visible emissions for that specific process.

- (e) The Compliance Response Plan for this unit shall contain troubleshooting contingency and response steps for when an abnormal emission is observed. Failure to take response steps in accordance with Section C - Compliance Response Plan - Preparation, Implementation, Records, and Reports, shall be considered a deviation from this permit.

D.6.57 Cyclone Inspections

An external inspection shall be performed each calendar quarter and an internal inspection shall be performed each calendar year of the cyclone controlling the Pellet Cooling process. Inspections required by this condition shall not be performed during consecutive months.

D.6.6 Cyclone Failure Detection

~~In the event that cyclone failure has been observed:~~

~~Failed units and the associated process will be shut down immediately until the failed units have been repaired or replaced. Operations may continue only if the event qualifies as an emergency and the Permittee satisfies the requirements of the emergency provisions of this permit (Section B - Emergency Provisions). Failure to take response steps in accordance with Section C - Compliance Response Plan - Preparation, Implementation, Records, and Reports, shall be considered a deviation from this permit.~~

Record Keeping and Reporting Requirements [326 IAC 2-7-5(3)] [326 IAC 2-7-19]

D.6.78 Record Keeping Requirements

- (a) To document compliance with Condition D.6.46, the Permittee shall maintain records of visible emission notations of the Pellet Cooling stack exhaust once per shift.
- (b) To document compliance with Condition D.6.57, the Permittee shall maintain records of the results of the inspections required under Condition D.6.57 and the dates the vents are redirected.
- (c) All records shall be maintained in accordance with Section C - General Record Keeping Requirements, of this permit.

[End of permit changes]

Conclusions

The modification to the existing operating permit T145-9004-00035 shall be subject to the conditions of the attached proposed Significant Source Modification No. **145-21206-00035** and Significant Permit Modification No. **145-21327-00035**.
