Re: 175-30791-00016  
First Notice-Only Change to  
M175-23829-00016

Dear Dale Eichmeyer:

Blue River Wood Products was issued a Minor Source Operating Permit (MSOP) No. M175-23829-00016 on July 5, 2007 for a stationary staves and headings manufacturing source (sawmill and woodworking) located at 5170 W SR 56, Salem, Indiana 47167. On August 11, 2011, the Office of Air Quality (OAQ) received an application from the source to replace an "in kind" water jacket which serves the sawing operation.

1. relating to the replacement of the sawing operations "in kind" water jacket, identified as EP 7 with a new "in kind" water jacket also identified as EP 7. Since the water jacket is an "in kind" replacement, the installation will not result in any increase of facility emissions. This replacement will not result in the replacement or repair of the entire sawing operation process, does not qualify as a reconstruction of the entire sawing operation process, and will not result in an increase of actual emissions. Therefore, this change to the permit is considered a notice-only change pursuant to 326 IAC 2-6.1-6(d)(12).

Pursuant to the provisions of 326 IAC 2-6.1-6, the permit is hereby revised as follows with the deleted language as strikeouts and new language **bolded**.

8. A description of the measures to be implemented to control fugitive particulate matter emissions resulting from emission points identified in subdivision 3:

The unpaved roads, parking lots and stockpile will be visually inspected at least once daily (or more often as conditions warrant) for signs of fugitive particulate emissions. If needed, these areas will be sprayed with water to control emissions. The frequency of application will be on an “as needed” basis.

9. A specification of the dust suppressant material, such as oil or chemical including the estimated frequency of application rates and concentrations.

The dust suppressant material is water. It is estimated that the frequency of application will vary throughout the year as the precipitation varies, such that the water will be sprayed from 0 (during periods of high precipitation) to 3 times per day (during the hot summer, arid times of the year).

10. A specification of the particulate matter collection equipment used as a fugitive particulate matter emission control measure.

Water from well on the property applied by hose.

11. A schedule of compliance with the provisions of the control plan. Such a schedule shall specify the amount of time the source requires to award any necessary contracts, commence and complete construction, installation or modification of the fugitive particulate matter emission control measures.

Blue River Wood Products will designate and train existing employees to use water "as needed" to control fugitive emissions.
