Re: Interim Significant Source Modification Petition Approval
067-31934i-00065

Dear Ms. Milescu:

On June 5, 2012, the Office of Air Quality (OAQ) received an interim Significant Source Modification petition from Chrysler Group, LLC, located at 2401 S. Reed Road, in Kokomo, Indiana for construction of a new transmission line with the following units: wet machining, heated water pallet washers, laser part markers and high-pressure deburring units.

A public notice of the interim Significant Source Modification petition was published in the Kokomo Tribune on May 26, 2012. The public comment period ended on June 13, 2012.

There were no comments received during the public comment period. This interim Significant Source Modification petition is in effect upon issuance and expires on the effective date of the final Significant Source Modification permit.

The interim Significant Source Modification petition may be revoked after the effective date upon a written finding by the Indiana Department of Environmental Management (IDEM) that any of the reasons for denial in 326 IAC 2-13-1(h) exist or if the final Significant Source Modification permit is denied. The IDEM has reviewed this interim Significant Source Modification petition and has not found any such reason. The facilities subject to this approval may not operate until the final Significant Permit Modification is issued by OAQ.

The interim Significant Source Modification petition is federally enforceable. Detailed construction and operation conditions will be specified in the final Significant Source Modification permit 067-30807i-00065.

If you have any questions regarding this interim Significant Source Modification petition, please contact Heath Hartley, OAQ, 100 North Senate Avenue, MC 61-53, Room 1003, Indianapolis, Indiana, 46204-2251, or call at (800) 451-6027, and ask for Heath Hartley or extension 2-8217, or dial (317) 232-8217.

KTP is planning to install equipment to support a new transmission line for the EP2 FWD transmission. The majority of the emission units proposed for installation will be considered insignificant as defined in the Indiana Administrative Code (IAC). This includes the following insignificant sources: high pressure deburring units; heated water pallet washers; and laser part markers. Trivial and exempt equipment include air leak testing units and transmission assembly operations. The proposed project is not anticipated to include the installation of any significant sources, however, the various wet machining units to be installed will be considered significant as they require the use of control devices. Proposed quantities are provided in the table below.

Wet Machining	163
Water Pallet Washers	10
Laser Part Markers	10
High-pressure Deburr	13

Potential to Emit:

Based on 8,760 hours per year of operation, the allowable annual emissions are presented in the table below:

Criteria Pollutants and HAP		
Pollutant	Potential Emissions (TPY)	PSD Permit Threshold (TPY)
NO _x	0.00	40
CO	0.00	100
VOC	0.06	40
PM	3.06	25
PM ₁₀	3.06	15
PM _{2.5}	3.06	10
SO ₂	0.00	40
Pb	0.00	0.6
HAP	0.06	n/a

PM, PM10/PM2.5 emissions are limited to 8.57 tons per year by requiring the use of particulate control devices on the wet machining operations.

PSD Requirements:

KTP is located in Howard County, which is currently considered attainment for all criteria pollutants. This project is not associated with other projects that have or may occur at KTP. In accordance with U.S. Environmental Protection Agency (EPA) guidance, allowable emissions from other projects were not evaluated when determining federal new source review (i.e., PSD) applicability. Only emissions from the proposed installation were utilized in determining PSD applicability. KTP is currently a major stationary source under PSD. Since the estimated allowable emissions from the proposed installation will be less than 25 TPY for PM, less than 15 TPY for PM10, less than 10 TPY for PM2.5, less than 100 TPY for CO and less than 40 TPY for VOC, PSD regulations are not applicable to the proposed installation.

- (a) In order to render PSD not applicable, the oil mist collectors for particulate control shall be in operation and control emissions from the wet machines at all times that the respective wet machines are in operation.
- (b) In order to render PSD not applicable, PM, PM10 and PM2.5 shall be limited to the following Emission Unit Specific hourly emission rates for those process categories requiring a particulate control device:

Emissions Units (EU) That require PM control	PM, PM10, PM2.5	PM, PM10, PM2.5	PM, PM10, PM2.5
	Per EU Category	Per EU Category	Per Individual EU
	TPY	Lbs/Hr	Lbs/hr
Wet Machining	3.06	0.63	0.004

NSPS Requirements:

There are no NSPS applicable to these types of processes as referenced in 326 IAC 12 or 40 CFR 60.

NESHAP Requirements:

There is no applicable NESHAP rule applicable to this operation or equipment.

State Rules & Requirements:

The following state requirements apply:

- (a) **Opacity Limitations – Visible Emissions Limitations (326 IAC 5-1-2(1))**
This regulation applies to the emission units that exhaust to atmosphere. Pursuant to 326 IAC 5-1-2, visible emissions from a source or facility located in an attainment area for particulate matter (PM) shall not exceed an average (40%) opacity in any one (1) six (6) minute averaging period. Also, visible emissions shall not exceed sixty per cent (60%) opacity for more than a cumulative total of fifteen (15) minutes (sixty (60) readings as measured according to 40 CFR 60, Appendix A, Method 9 or fifteen (15) one (1) minute non-overlapping integrated averages for a continuous opacity monitor) in a six (6) hour period.

The equipment proposed for installation will comply with the opacity limitations.

(b) 5.2.2 Particulate Limitations (326 IAC 6.5-1)
KTP is located in Howard County, which is one of the listed counties in Rule 326 IAC 6.5-1, and
KTP's potential PM emissions are greater than 100 tons per year. As such, Rule 326 IAC 6.5-1-2
applies to this source. Pursuant to Rule 326 IAC 6.5-1-2, the controlled PM emissions from the
proposed new units shall be limited to 0.03 grains per dry standard cubic foot (gr/dscf) of exhaust
gas.

As indicated in Table 5 of the permit to construct application, the estimated outlet grain loadings
of all new emission units are less than 0.03 gr/dscf of exhaust gas.

Federal Enforceability:

The company consents to the federal enforceability of this interim petition.
