Re: 097-32392-00314
First Administrative Amendment to
M097-26524-00314

Dear Mr. Kannianen:

Temple-Inland, Inc. dba International Paper was issued a Minor Source Operating Permit MSOP Renewal No. M097-26524-00314 on September 9, 2008 for a stationary flexographic printing operation located at 2135 Stout Field East Dr., Indianapolis, IN 46241-4014. On October 9, 2012, the Office of Air Quality (OAQ) received an application from the source requesting to add two (2) folder gluer machines (EU-032 and EU-03) and two (2) taping machines (EU-034 and EU-035), and change of name of the permittee from TIN, Inc. dba to International Paper to International Paper.

Pursuant to 326 IAC 2-6.1(d)(3), the name change is considered an administrative amendment because the permit is amended to indicate a change in ownership or operational control of the source where there is no other change in the permit is necessary.

The company name has been revised throughout the permit as follows:

Company Name: ~~Temple-Inland Inc dba International Paper~~
International Paper

Pursuant to 326 IAC 2-6.1(d)(11), the addition of the two gluer machines and the two taping machines is considered an administrative amendment because the permit is amended to add an emissions unit, subject to 326 IAC 2-1.1-3 (Exemptions), at the request of the applicant.

The following are the emissions units:

- (a) **Two (2) folder gluer machines identified as EU-032 and EU-033, installed in 2012, with a maximum glue usage of 14 pounds per hour, and 45 pounds per hour respectively, using no controls.**
- (b) **Two (2) taping machines identified as EU-034 and EU-035, installed in 2012, each with a maximum operating capacity of 12,000 sheets per hour, each with emissions below 1 ton per year (tpy), and with no controls.**

The PTE of the emission unit is as follows:

- (a) The uncontrolled/unlimited potential to emit VOC of the new emission units is below 10 tpy and hence this modification is exempt from permitting.
- (b) The uncontrolled/unlimited potential to emit VOC of the entire source will continue to be within the threshold levels specified in 2-6.1-6(g)(3) (MSOP). (See Appendix A for the calculations).
- (c) The uncontrolled/unlimited potential to emit (as defined in 326 IAC 2-1.1-1) greenhouse gases (GHGs) of the entire source is less than the Title V regulation threshold of one hundred thousand (100,000) tons of CO₂ equivalent emissions (CO₂e) per year. Therefore the source is not subject to the provisions of 326 IAC 2-7.
- (d) There are no New Source Performance Standards (NSPS) (326 IAC 12 and 40 CFR Part 60) or National Emission standards for Hazardous Air Pollutants (NESHAPs) (326 IAC 14, 20 and 40 CFR Part 61, 63) included in this administrative amendment.

Additional Changes

IDEM, OAQ has decided to make additional revisions to the permit as described below in order to update the language to match the most current version of the applicable rule, to eliminate redundancy within the permit, and to provide clarification regarding the requirements of these conditions.

1. Pursuant to 326 IAC 2-7-1(39), starting July 1, 2011, greenhouse gases (GHGs) emissions are subject to regulation at a source with a potential to emit (PTE) 100,000 tons per year or more of CO₂ equivalent emissions (CO₂e). Therefore, CO₂e emissions have been calculated for this source. Based on the calculations, the unlimited PTE GHGs from the entire source is less than 100,000 tons of CO₂e per year (see Appendix A for the calculations). This did not require any changes to the permit.

...

The permit has been revised as follows with deleted language as ~~strikeouts~~ and new language **bolded**:

A.2 Emission Units and Pollution Control Equipment Summary

This stationary source consists of the following emission units and pollution control devices:

- (t) **Two (2) taping machines identified as EU-034 and EU-035, installed in 2012, each with a maximum operating capacity of 12,000 sheets per hour, each with emissions below 1 ton per year (tpy), and with no controls.**

Where: Pt = Pounds of particulate matter emitted per million Btu (lb/mmBtu) heat input.

Q = Total source maximum operating capacity rating in million Btu per hour (mmBtu/hr) heat input. The maximum operating capacity rating is defined as the maximum capacity at which the facility is operated or the nameplate capacity, whichever is specified in the facility's permit application, except when some lower capacity is contained in the facility's operation permit; in which case, the capacity specified in the operation permit shall be used.

- (b) Equip the cleaner with a facility for draining cleaned parts;
- (c) Close the degreaser cover whenever parts are not being handled in the cleaner;
- (d) Drain cleaned parts for at least fifteen (15) seconds or until dripping ceases;
- (e) Provide a permanent, conspicuous label summarizing the operation requirements;
- (f) Store waste solvent only in covered containers and not dispose of waste solvent or transfer it to another party, in such a manner that greater than twenty percent (20%) of the waste solvent (by weight) can evaporate into the atmosphere.

D.2.3 Volatile Organic Compounds (VOC) [326 IAC 8-3-5]

 - (B) The solvent is agitated; or
 - (C) The solvent is heated.
 - (2) Equip the degreaser with a facility for draining cleaned articles. If the solvent volatility is greater than four and three-tenths (4.3) kiloPascals (thirty-two (32) millimeters of mercury or six-tenths (0.6) pounds per square inch) measured at thirty-eight degrees Celsius (38^oC) (one hundred degrees Fahrenheit (100^oF)), then the drainage facility must be internal such that articles are enclosed under the cover while draining. The drainage facility may be external for applications where an internal type cannot fit into the cleaning system.
 - (3) Provide a permanent, conspicuous label which lists the operating requirements outlined in subsection (b).
 - (4) The solvent spray, if used, must be a solid, fluid stream and shall be applied at a pressure which does not cause excessive splashing.

- (A) A freeboard that attains a freeboard ratio of seventy-five hundredths (0.75) or greater.
 - (B) A water cover when solvent is used is insoluble in, and heavier than, water.
 - (C) Other systems of demonstrated equivalent control such as a refrigerated chiller or carbon adsorption. Such systems shall be submitted to the U.S. EPA as a SIP revision.
- (b) Pursuant to 326 IAC 8-3-5(b) (Cold Cleaner Degreaser Operation and Control), the owner or operator of a cold cleaning facility construction of which commenced after July 1, 1990, shall ensure that the following operating requirements are met:
- (1) Close the cover whenever articles are not being handled in the degreaser.
 - (2) Drain cleaned articles for at least fifteen (15) seconds or until dripping ceases.

***Essential services** are interpreted to mean those operations, such as, the providing of electricity by power plants. Continued operation solely for the economic benefit of the owner or operator shall not be sufficient reason why a facility cannot be shutdown during a control equipment shutdown.

The N2O Emission Factor for uncontrolled is 2.2. The N2O Emission Factor for low Nox burner is 0.64.
 Emission Factors are from AP 42, Table 1.4-2 SCC #1-02-006-02, 1-01-006-02, 1-03-006-02, and 1-03-006-03.

Note*: EPA removed glycol ethers with CAS No. 111-76-2 off the HAP list on November 29, 2004 (69FR69320). Since the manufacturer % content of Glycol ether group of compounds and 1,1 Dichloro-1-Fluroethane is proprietary and could not be obtained or verified by the source, thus they could not be taken off the HAP list. Therefore, glycol ethers were counted in the HAP calculations.
