Re: Interim Significant Source Modification Petition Approval  
067-33549I-00078

Dear Ms. Milescu:

On August 20, 2013, the Office of Air Quality (OAQ) received an interim Significant Source Modification petition from Chrysler Group, LLC - Kokomo Transmission Plant, located at 2401 S Reed Road, in Kokomo, Indiana for construction of 80 wet machining operations, 8 high-pressure deburring units, and 6 laser part markers as part of the EP2 FWD transmission project.

A public notice of the interim Significant Source Modification petition was published in the *Kokomo Tribute* on August 20, 2013. The public comment period ended on September 3, 2013.

There were no comments received during the public comment period. This interim Significant Source Modification petition is in effect upon issuance and will expire on the effective date of the final Significant Source Modification permit.

The interim Significant Source Modification petition may be revoked after the effective date upon a written finding by the Indiana Department of Environmental Management (IDEM) that any of the reasons for denial in 326 IAC 2-13-1(h) exist or if the final Significant Source Modification permit is denied. The IDEM has reviewed this interim Significant Source Modification petition and has not found any such reason. The facilities subject to this approval may not operate until the final Significant Permit Modification is issued by OAQ.

The interim Significant Source Modification petition is federally enforceable. Detailed construction and operation conditions will be specified in the final Significant Source Modification permit 067-33549-00078.

**Description of the Operation or Equipment:**

KTP is planning to install equipment for a machining line to supply transmission parts to the Tipton Transmission Assembly Operation. The majority of the emission units proposed for installation will be considered insignificant as defined in the Indiana Administrative Code (IAC). This includes the following insignificant sources: high pressure deburring units; and laser part markers. The proposed project is not anticipated to include the installation of any significant sources, however, the various wet machining units to be installed will be considered significant as they require the use of control devices. Proposed quantities are provided in the table below.

Wet Machining	80
Laser Part Markers	6
High-pressure Deburr	8

**Potential to Emit:**

Based on 8,760 hours per year of operation, the allowable annual emissions are presented in the table below. The estimates include emissions from the original KTP EP2 FWD project (Permit No. 31934) and the KCP EP2 FWD project.

Criteria Pollutants and HAP			
Pollutant	KTP Tipton Potential Emissions (TPY)	Total (KTP + KCP) Potential Emissions (TPY)	PSD Permit Threshold (TPY)
NO <sub>x</sub>	0.00	0.00	40
CO	0.00	0.00	100
VOC	0.03	0.10	40
PM	1.54	11.65	25
PM <sub>10</sub>	1.54	8.80	15
PM <sub>2.5</sub>	1.54	7.37	10
SO <sub>2</sub>	0.00	0.00	40
Pb	0.00	0.00	0.6
HAP	0.032	0.14	n/a

As shown in the above table, PM, PM10, PM2.5 emissions are limited to less than their respective significance thresholds by requiring the use of particulate control devices on the wet machining operations.

#### PSD Requirements:

KTP is located in Howard County, which is currently considered attainment for all criteria pollutants. KTP is currently a major stationary source under PSD. Since the estimated allowable emissions from the proposed installation will be less than 25 TPY for PM, less than 15 TPY for PM10, less than 10 TPY for PM2.5, less than 100 TPY for CO and less than 40 TPY for VOC, PSD regulations are not applicable to the proposed installation.

- (a) In order to render PSD not applicable, the oil mist collectors for particulate control shall be in operation and control emissions from the wet machines at all times that the respective wet machines are in operation.
- (b) In order to render PSD not applicable, PM, PM10 and PM2.5 shall be limited to the following Emission Unit Specific emission rates for those process categories requiring a particulate control device:

Emissions Units (EU) That require PM control	PM, PM10, PM2.5	PM, PM10, PM2.5	PM, PM10, PM2.5
	Per EU Category	Per EU Category	Per Individual EU
	TPY	Lbs/Hr	Lbs/hr
Wet Machining	1.4	0.32	0.004

- (c) In order to confirm that the control devices are functioning for control of PM, PM10 and PM2.5 the Permittee will confirm that the mist collectors used in conjunction with the wet machining operations are in operation at least once per day when the wet machining process is operating.

#### NSPS Requirements:

There are no NSPS applicable to these types of processes as referenced in 326 IAC 12 or 40 CFR 60.

#### NESHAP Requirements:

There is no applicable NESHAP rule applicable to this operation or equipment.

#### State Rules & Requirements:

The following state requirements apply:

- (a) **Opacity Limitations – Visible Emissions Limitations (326 IAC 5-1-2(1))**  
This regulation applies to the emission units that exhaust to atmosphere. Pursuant to 326 IAC 5-1-2, visible emissions from a source or facility located in an attainment area for particulate matter (PM) shall not exceed an average (40%) opacity in any one (1) six (6) minute averaging period. Also, visible emissions shall not exceed sixty per cent (60%) opacity for more than a cumulative total of fifteen (15) minutes (sixty (60) readings as measured according to 40 CFR 60, Appendix A, Method 9 or fifteen (15) one (1) minute non-overlapping integrated averages for a continuous opacity monitor) in a six (6) hour period.

The equipment proposed for installation will comply with the opacity limitations.

- (b) 5.2.2 Particulate Limitations (326 IAC 6.5-1)  
KTP is located in Howard County, which is one of the listed counties in Rule 326 IAC 6.5-1, and KTP's potential PM emissions are greater than 100 tons per year. As such, Rule 326 IAC 6.5-1-2 applies to this source. Pursuant to Rule 326 IAC 6.5-1-2, the controlled PM emissions from the proposed new units shall be limited to 0.03 grains per dry standard cubic feet (gr/dscf) of exhaust gas.

As indicated in Table 5 of the permit to construct application, the estimated outlet grain loadings of all new emission units are less than 0.03 gr/dscf of exhaust gas.

**Federal Enforceability:**

The company consents to the federal enforceability of this interim petition.
