NOTICE OF 30-DAY PERIOD FOR PUBLIC COMMENT

Preliminary Findings Regarding a
Significant Modification to a
Part 70 Operating Permit
for Consolidated Grain and Barge Co. in Posey County

Significant Source Modification No.: 129-36267-00035

Significant Permit Modification No.: 129-36269-00035

The Indiana Department of Environmental Management (IDEM) has received an application from Consolidated Grain and Barge Co., located at 2781 Bluff Road, Mt. Vernon, Indiana 47620, for a significant modification of its Part 70 Operating Permit issued on January 25, 2013. If approved by IDEM's Office of Air Quality (OAQ), this proposed modification would allow Consolidated Grain and Barge Co., to make certain changes at its existing source. Consolidated Grain and Barge Co. has applied to add a third meal grinder and a third meal grinding hopper to the meal handling process P9 and to increase the air flow rate of the baghouse controlling this process.

The applicant intends to construct and operate new equipment that will emit air pollutants; therefore, the permit contains new or different permit conditions. In addition, some conditions from previously issued permits/approvals have been corrected, changed, or removed. These corrections, changes, and removals may include Title I changes (e.g. changes that add or modify synthetic minor emission limits). IDEM has reviewed this application and has developed preliminary findings, consisting of a draft permit and several supporting documents, which would allow the applicant to make this change.

A copy of the permit application and IDEM's preliminary findings are available at:

Alexandrian Public Library
115 W. Fifth Street
Mount Vernon, IN 47620

and

IDEM Southwest Regional Office
1120 N. Vincennes Avenue
P.O. Box 128
Petersburg, IN 47567-0128

A copy of the preliminary findings is available on the Internet at: <http://www.in.gov/ai/appfiles/idem-caats/>.

How can you participate in this process?

The date that this notice is published in a newspaper marks the beginning of a 30-day public comment period. If the 30th day of the comment period falls on a day when IDEM offices are closed for business, all comments must be postmarked or delivered in person on the next business day that IDEM is open.

You may request that IDEM hold a public hearing about this draft permit. If adverse comments concerning the **air pollution impact** of this draft permit are received, with a request for a public hearing, IDEM will decide whether or not to hold a public hearing. IDEM could also decide to hold a public meeting instead of, or in addition to, a public hearing. If a public hearing or meeting is held, IDEM will make a separate announcement of the date, time, and location of that hearing or meeting. At a hearing,

A State that Works

you would have an opportunity to submit written comments and make verbal comments. At a meeting, you would have an opportunity to submit written comments, ask questions, and discuss any air pollution concerns with IDEM staff.

Comments and supporting documentation, or a request for a public hearing should be sent in writing to IDEM at the address below. If you comment via e-mail, please include your full U.S. mailing address so that you can be added to IDEM's mailing list to receive notice of future action related to this permit. If you do not want to comment at this time, but would like to receive notice of future action related to this permit application, please contact IDEM at the address below. Please refer to permit number SSM129-36267-00035 and SPM129-36269-00035 in all correspondence.

Comments should be sent to:

Madhurima Moulik
IDEM, Office of Air Quality
100 North Senate Avenue
MC 61-53 IGCN 1003
Indianapolis, Indiana 46204-2251
(800) 451-6027, ask for extension 3-0868
Or dial directly: (317) 233-0868
Fax: (317) 232-6749 attn: Madhurima Moulik
E-mail: mmoulik@idem.IN.gov

All comments will be considered by IDEM when we make a decision to issue or deny the permit. Comments that are most likely to affect final permit decisions are those based on the rules and laws governing this permitting process (326 IAC 2), air quality issues, and technical issues. IDEM does not have legal authority to regulate zoning, odor, or noise. For such issues, please contact your local officials.

For additional information about air permits and how the public and interested parties can participate, refer to the IDEM Permit Guide on the Internet at: <http://www.in.gov/idem/5881.htm>; and the Citizens' Guide to IDEM on the Internet at: <http://www.in.gov/idem/6900.htm>.

What will happen after IDEM makes a decision?

Following the end of the public comment period, IDEM will issue a Notice of Decision stating whether the permit has been issued or denied. If the permit is issued, it may be different than the draft permit because of comments that were received during the public comment period. If comments are received during the public notice period, the final decision will include a document that summarizes the comments and IDEM's response to those comments. If you have submitted comments or have asked to be added to the mailing list, you will receive a Notice of the Decision. The notice will provide details on how you may appeal IDEM's decision, if you disagree with that decision. The final decision will also be available on the Internet at the address indicated above, at the local library indicated above, at the IDEM Regional Office indicated above, and the IDEM public file room on the 12th floor of the Indiana Government Center North, 100 N. Senate Avenue, Indianapolis, Indiana 46204-2251.

If you have any questions, please contact Madhurima Moulik of my staff at the above address.

DRAFT

Mr. Doug VanMeter
Consolidated Grain and Barge Co.
P. O. Box 289
Mt. Vernon, IN 47620

Re: 129-36267-00035
Significant Source Modification

Dear Mr. Van Meter:

Consolidated Grain and Barge Co. was issued Part 70 Operating Permit Renewal No. T129-31079-00035 on January 25, 2013 for a stationary soybean oil extraction plant located at 2781 Bluff Road, Mt. Vernon, Indiana 47620. An application to modify the source was received on September 14, 2015. Pursuant to the provisions of 326 IAC 2-7-10.5, a Significant Source Modification is hereby approved as described in the attached Technical Support Document.

Pursuant to 326 IAC 2-7-10.5, the following emission units are approved for construction at the source:

- (a) The following equipment at the meal handling process, identified as P9, approved in 1996 for construction and approved in 2016 for modification, with a nominal capacity of 90.7 tons of meal per hour, controlled by baghouse C9, and exhausting to Stack 9:
 - (1) One (1) meal grinder.
 - (2) One (1) meal grinding hopper.

The following construction conditions are applicable to the proposed modification:

- 1. General Construction Conditions

The data and information supplied with the application shall be considered part of this source modification approval. Prior to any proposed change in construction which may affect the potential to emit (PTE) of the proposed project, the change must be approved by the Office of Air Quality (OAQ).
- 2. This approval to construct does not relieve the Permittee of the responsibility to comply with the provisions of the Indiana Environmental Management Law (IC 13-11 through 13-20; 13-22 through 13-25; and 13-30), the Air Pollution Control Law (IC 13-17) and the rules promulgated thereunder, as well as other applicable local, state, and federal requirements.
- 3. Effective Date of the Permit

Pursuant to IC 13-15-5-3, this approval becomes effective upon its issuance.
- 4. Commenced Construction

Pursuant to 326 IAC 2-1.1-9 and 326 IAC 2-7-10.5(j), the Commissioner may revoke this approval if construction is not commenced within eighteen (18) months after receipt of this approval or if construction is suspended for a continuous period of one (1) year or more.
- 5. All requirements and conditions of this construction approval shall remain in effect unless modified in a manner consistent with procedures established pursuant to 326 IAC 2.

DRAFT

- Approval to Construct
6. Pursuant to 326 IAC 2-7-10.5(h)(2), this Significant Source Modification authorizes the construction of the new emission unit(s), when the Significant Source Modification has been issued.

Pursuant to 326 IAC 2-7-10.5(m), the emission units constructed under this approval shall not be placed into operation prior to revision of the source's Part 70 Operating Permit to incorporate the required operation conditions.

Pursuant to 326 IAC 2-7-12, operation of the new emission unit(s) is not approved until the Significant Permit Modification has been issued. Operating conditions shall be incorporated into the Part 70 Operating Permit as a Significant Permit Modification in accordance with 326 IAC 2-7-10.5(m)(2) and 326 IAC 2-7-12 (Permit Modification).

A copy of the permit is available on the Internet at: <http://www.in.gov/ai/appfiles/idem-caats/>. For additional information about air permits and how the public and interested parties can participate, refer to the IDEM Permit Guide on the Internet at: <http://www.in.gov/idem/5881.htm>; and the Citizens' Guide to IDEM on the Internet at: <http://www.in.gov/idem/6900.htm>.

This decision is subject to the Indiana Administrative Orders and Procedures Act - IC 4-21.5-3-5.

If you have any questions on this matter, please contact Madhurima Moulik of my staff, OAQ, 100 North Senate Avenue, MC 61-53 IGCN 1003, Indianapolis, Indiana, 46204-2251, or call at (800) 451-6027, and ask for Madhurima Moulik or extension 3-0868 or dial (317) 233-0868.

Sincerely,

Jason R. Krawczyk, Section Chief

Significant Source Modification to a Part 70 Source

OFFICE OF AIR QUALITY DRAFT

**Consolidated Grain and Barge Co.
2781 Bluff Road
Mt. Vernon, Indiana 47620**

(herein known as the Permittee) is hereby authorized to construct subject to the conditions contained herein, the source described in Section A (Source Summary) of this permit.

This permit is issued in accordance with 326 IAC 2 and 40 CFR Part 70 Appendix A and contains the conditions and provisions specified in 326 IAC 2-7 as required by 42 U.S.C. 7401, et. seq. (Clean Air Act as amended by the 1990 Clean Air Act Amendments), 40 CFR Part 70.6, IC 13-15 and IC 13-17. This permit also addresses certain new source review requirements for new and/or existing equipment and is intended to fulfill the new source review procedures pursuant to 326 IAC 2-7-10.5, applicable to those conditions.

Significant Source Modification No.: 129-36267-00035

SECTION A

SOURCE SUMMARY

This permit is based on information requested by the Indiana Department of Environmental Management (IDEM), Office of Air Quality (OAQ). The information describing the source contained in conditions A.1 through A.3 is descriptive information and does not constitute enforceable conditions. However, the Permittee should be aware that a physical change or a change in the method of operation that may render this descriptive information obsolete or inaccurate may trigger requirements for the Permittee to obtain additional permits or seek modification of this permit pursuant to 326 IAC 2, or change other applicable requirements presented in the permit application.

A.1 General Information [326 IAC 2-7-4(c)] [326 IAC 2-7-5(14)] [326 IAC 2-7-1(22)]

The Permittee owns and operates a stationary soybean oil extraction plant.

Source Status:	Part 70 Operating Permit Program Minor Source, under PSD Major Source, under Section 112 of the Clean Air Act Not in 1 of 28 Source Categories

A.2 Emission Units and Pollution Control Equipment Summary [326 IAC 2-7-4(c)(3)] [326 IAC 2-7-5(14)]

This stationary source consists of the following emission units and pollution control devices:

- (a) Three (3) 33.7 MMBtu per hour natural gas fired boilers, identified as P17, P18, and P18A, approved in 1996 for construction, and exhausting to Stacks 17, 18, and 18A, respectively. Under NSPS, Subpart Dc, boilers P17, P18, and P18A are considered small industrial-commercial-institutional steam generating units. Under NESHAP, Subpart DDDDD, boilers P17, P18, and P18A are considered part of the existing, affected source.
- (b) Two (2) wood/shredded tire fired boilers, identified as P17B and P17C, approved in 2006 for construction, each with a nominal heat input capacity of 57.3 MMBtu/hr, both controlled by one (1) electrostatic precipitator (ESP) (identified as ES1), and exhausting through Stack 17A. Stack 17A is equipped with a continuous opacity monitoring system (COMS). Under NSPS, Subpart Dc, boilers P17B and P17C are considered small industrial-commercial-institutional steam generating units. Under NESHAP, Subpart DDDDD, boilers P17B and P17C are considered part of the existing, affected source.
- (c) One (1) north truck receiving area, identified as P24, approved in 2001 for construction, with a nominal throughput capacity of 360 tons per hour, controlled by baghouse C24, and exhausting to Stack 24. Under NSPS, Subpart DD, this unit is considered a truck unloading station.
- (d) One (1) north house bin loading area, identified as P27, approved in 2001 for construction, with a nominal throughput capacity of 360 tons per hour, and exhausting inside the north house, consisting of the following:
 - (1) One (1) totally enclosed aspirated elevator leg that transfers soybeans to enclosed conveyors.
 - (2) Two (2) enclosed conveyors that transfer the soybean from the north receiving area to the soybean storage areas.

Under NSPS, Subpart DD, this area is considered a grain handling operation.

- (e) One (1) soybean expander system, approved in 1996 for construction and approved in 2004 for modification, with a nominal capacity of 50 tons per hour. This system consists of the following:
- (1) One (1) expander, forming soybean collets.
 - (2) One (1) totally enclosed conveying system transferring material from the expander system to the extraction system.

Under NESHAP, Subpart GGGG, these emission units are considered vegetable oil production processes.

- (f) One (1) truck only soybean receiving area, identified as P1, approved in 1996 for construction, with a nominal throughput capacity of 600 tons per hour. This area consists of the following:
- (1) One (1) truck only receiving pit.
 - (2) One (1) totally enclosed belt conveyor system (or equivalent), using an oil application to control PM emissions.
 - (3) One (1) aspirated soybean receiving leg, controlled by an oil application to control PM emissions and also controlled by baghouse C1, exhausting to Stack 1.
 - (4) One (1) enclosed belt conveyor that transfers the soybean from the receiving leg to the soybean enclosed belt conveyor.
 - (5) One (1) enclosed belt conveyor that loads the soybean storage silos.

Under NSPS, Subpart DD, the emission units at this area are considered a truck unloading station and grain handling operations.

- (g) One (1) truck and railcar soybean receiving area, identified as P2, approved in 1996 for construction, with a nominal throughput capacity of 540 tons per hour, consisting of the following:
- (1) One (1) truck and railcar receiving pit, with PM emissions controlled by restricting vehicles unloading grain at these stations to hopper-bottom rail cars and trucks with choke unloading applications.
 - (2) One (1) enclosed drag conveyor system (or equivalent), using an oil application to control PM emissions.
 - (3) Two (2) aspirated soybean receiving legs, using an oil application to control PM emissions and also controlled by baghouse C1, exhausting to Stack 1.
 - (4) One (1) aspirated bulkweigher, using and oil application to control PM emissions and also controlled by baghouse C1, exhausting to Stack 1.
 - (5) One (1) enclosed drag conveyor that transfers the soybean at a nominal rate of 540 tons per hour from the receiving leg to the soybean covered belt conveyor that loads the soybean silos.

Under NSPS, Subpart DD, the emission units at this area are considered truck and railcar unloading stations and grain handling operations.

- (h) One (1) annex silo loading operation, identified as P2A, approved in 1996 for construction, with a nominal throughput rate of 1,740 tons per hour, controlled by an oil application system, and consisting of the following:
- (1) Twelve (12) concrete soybean silos, each with a nominal storage capacity of 73,053 bushels.
 - (2) Four (4) concrete soybean storage silos, each with a nominal capacity of 19,375 bushels.
 - (3) Two (2) concrete soybean storage silos, each with a nominal capacity of 18,801 bushels.
 - (4) Three (3) totally enclosed drag conveyors (or equivalent) comprising two conveyance systems located below the storage silos that transfer the soybeans from the silos to the elevator legs.

Under NSPS, Subpart DD, this silo loading operation is considered a grain handling operation.

- (i) One (1) soybean storage system, identified as P2B, approved in 2002 for construction and approved in 2009 for modification, with a nominal throughput of 600 tons per hour, controlled by an oil application system, and consisting of the following:
- (1) Two (2) soybean silos (P2B and P2C), with a nominal combined storage capacity of 1,177,000 bushels.
 - (2) Two (2) enclosed belt conveyors.
 - (3) Two (2) enclosed drag conveyors.

Under NSPS, Subpart DD, this soybean storage system is considered a grain handling operation.

- (j) One (1) flow coating material kaolin handling operation, identified as P3, approved in 1996 for construction, controlled by baghouse C3, and exhausting to Stack 3. This operation consists of the following:
- (1) One (1) flow coating material kaolin receiving bin.
 - (2) One (1) flow coating material enclosed conveyor system that transfers kaolin to the enclosed mixing screw conveyor, with a nominal throughput rate of 0.459 tons per hour.
- (k) One (1) soybean cleaning process, identified as P4, approved in 1996 for construction, with a nominal throughput rate of 125 tons per hour, controlled by baghouse C4, and exhausting to stack C4. This system consists of the following:
- (1) Two (2) soybean elevator legs that transfer the soybeans from the drag conveyor to the cleaner, using an oil application to control PM emissions.

- (2) One (1) totally enclosed conveyor that transfers the soybeans from the elevator legs to the cleaner.
- (3) One (1) cleaning system, consisting of the following:
 - (A) Two (2) cleaners, controlled by an oil application system and baghouse C4.
 - (B) Two (2) whole bean aspirators, controlled by an oil application system and baghouse C4.
 - (C) One (1) conveyor transferring beans from the aspirator to the hopper, controlled by an oil application system and baghouse C4.
 - (D) One (1) hopper, controlled by an oil application system and baghouse C4.
 - (E) One (1) scale, controlled by an oil application system and baghouse C4.
 - (F) Two (2) pods aspirators, approved in 2014 for construction, identified as P4A, with a maximum capacity of 125 tons per hour, controlled by baghouse C4A and exhausting through stack 4A.
 - (G) One (1) pods aspirator, controlled by cyclone C5E, exhausting to stack 5.
 - (H) One (1) pods breaker, controlled by cyclone C5E, and exhausting to stack 5.

Under NSPS, Subpart DD, this cleaning system is considered a grain handling operation.

- (l) One (1) soybean heater with one (1) L-Path totally enclosed drag conveyor, identified as P21, approved in 1996 for construction and approved in 2008 for replacement, with a nominal capacity of 125 tons per hour, and exhausting to Stack 21. Under NESHAP, Subpart GGGG, the soybean heater is considered vegetable oil production processes.
- (m) One (1) soybean cracking and dehulling operation, identified as P5, approved in 1996 for construction, with a nominal throughput rate of 125 tons per hour, and consisting of the following:
 - (1) One (1) enclosed drag conveyor (or equivalent) and one (1) totally enclosed overflow recycle L-Path conveyor (or equivalent) with a totally enclosed surge hopper that transfers soybeans to the jet dryers.
 - (2) Three (3) jet dryers, each with a nominal capacity of 42 tons per hour, controlled by cyclones C5A, C5B, and C5F, respectively, and exhausting to Stack 5.
 - (3) Three (3) primary CCD dryers, controlled by cyclones C5C and C5G, and exhausting to Stack 5.
 - (4) Three (3) secondary CCC coolers, controlled by cyclones C5D and C5H, and exhausting to Stack 5.
 - (5) Six (6) cracking and dehulling rolls that transfer the hulls through four (4) cyclones (C5C, C5D, C5G, and C5H) to an enclosed conveyor.

- (6) One (1) totally enclosed cracking and dehulling drag conveyor (or equivalent) that transfers hulls from cyclones C5A and C5B to the hull grinding system, with a nominal throughput rate of 8.75 tons per hour.
- (7) One (1) totally enclosed cracking and dehulling drag conveyor (or equivalent) that transfers hulls and aspirated fines from cyclones C5C, C5D, C5F, C5G, C5H, and the totally enclosed auger (or equivalent) of filter C4 to the hull screener and aspirator, with a nominal throughput rate of 8.75 tons per hour.
- (8) Two (2) hull screeners and aspirators, with a total nominal throughput rate of 8.75 tons per hour, controlled by cyclone C5E, and exhausting to Stack 5.

Under NESHAP, Subpart GGGG, these units are considered vegetable oil production processes.

- (n) One (1) hull grinding operation, identified as P6, approved in 1996 for construction, with a nominal throughput rate of 8.75 tons per hour, controlled by baghouse C6, and exhausting to Stack 6. This operation is consisting of the following:
 - (1) Two (2) hull grinders.
 - (2) One (1) ground hulls cyclone.
 - (3) One (1) totally enclosed drag conveyor (or equivalent) that transfers hulls from the ground hulls cyclone to the hull hopper.
- (o) One (1) hull storage operation, identified as P7, approved in 1996 for construction, with a nominal throughput rate of 15 tons per hour, controlled by baghouse C7, and exhausting to Stack 7. This operation is consisting of the following:
 - (1) One (1) ground hulls blower that transfers hulls to the Hull storage bins.
 - (2) Hull storage bins, with a nominal capacity of 39,000 cubic feet.
 - (3) Two (2) totally enclosed drag conveyor (or equivalent) that transfers hulls to the ground hulls blower.
 - (4) One (1) ground hulls blower that transfers hulls to the hull hopper.
- (p) One (1) hull handling operation, approved in 1996 for construction, with a nominal throughput rate of 15 tons per hour, controlled by baghouse C7A, and exhausting to Stack 7A. This operation is consisting of the following:
 - (1) One (1) hull hopper that feeds to the pellet mills.
 - (2) Two (2) hull pellet mills, identified as P7A, approved in 1996 for construction, and P7B, approved in 2008 for construction. Only one (1) pellet mill is capable of operating at any given time.
- (q) One (1) hull pellet cooler, identified as P8, approved in 1996 for construction, with a nominal capacity of 15 tons per hour, controlled by cyclone C8, and exhausting to Stack 8.
- (r) Pellet storage operation consisting of the following:

- (1) Pellet storage bin, identified as P8A, approved in 1996 for construction, with a nominal capacity of 29,000 cubic feet, controlled by baghouse C8A that exhausts to Stack 8A.
 - (2) Pellet storage building, identified as P8B, approved in 1996 for construction, with a nominal capacity of 70,000 cubic feet, controlled by baghouse C8B that exhausts to Stack 8B.
 - (3) Only one pellet storage can receive product at any one time.
- (s) One (1) soybean flaking operation, identified as P19, approved in 1996 for construction and approved in 2009 and in 2010 for modification, with a nominal throughput rate of 114.0 tons per hour, and consisting of the following:
- (1) One (1) totally enclosed drag conveyor (or equivalent) and one (1) totally enclosed overflow recycle L-Path conveyor (or equivalent) with a totally enclosed surge hopper that transfers beans from cracking and dehulling to the flakers.
 - (2) Ten (10) flakers, controlled by baghouses C19A, C19B, and C19C, exhausting to Stack 19, and/or controlled by baghouse C19D, exhausting to Stack P19D.
 - (3) Two (2) totally enclosed drag conveyors (or equivalent) in series that transfer soybean flakes and collets from the flakers and the expander system to the feed screw conveyor.
 - (4) One (1) feed screw conveyor that transfers soybean flakes and collets to the extractor.

Under NESHAP, Subpart GGGG, these units are considered vegetable oil production processes.

- (t) One (1) soybean oil extraction system, identified as P13, approved in 1996 for construction, controlled by mineral oil absorber system C13, and exhausting to Stack 13. This system consists of the following:
- (1) One (1) soybean oil extractor, with a nominal capacity of 114.0 tons of soybean flakes and collets per hour and 114.0 tons of hexane per hour.
 - (2) One (1) desolventizer unit, with a nominal capacity of 94.4 tons of spent soybean flakes and collets per hour.
 - (3) A set of evaporators, with a nominal capacity of 24.0 tons of soybean oil per hour.
 - (4) A set of condensers and water separator to separate hexane and water, with a nominal capacity of 24.0 tons of soybean oil per hour.
 - (5) One (1) totally enclosed drag conveyor (or equivalent) that transfers flakes and hexane to the desolventizer at a nominal rate of 94.4 tons per hour and 37.5 tons per hour, respectively.

Under NESHAP, Subpart GGGG, these units are considered vegetable oil production processes.

- (u) One (1) DTDC meal dryer section 1, identified as P10, approved in 1996 for construction, with a nominal drying capacity of 90.7 tons of meal per hour, controlled by cyclone C10, and exhausting to Stack 10. Under NESHAP, Subpart GGGG, this unit is considered a vegetable oil production process.
 - (v) One (1) DTDC meal dryer section 2, identified as P11, approved in 1996 for construction, with a nominal drying capacity of 90.7 tons of meal per hour, controlled by cyclone C11, and exhausting to Stack 11. Under NESHAP, Subpart GGGG, this unit is considered a vegetable oil production process.
 - (w) One (1) DTDC meal dryer section 3, identified as P12, approved in 2009 for modification, with a nominal capacity of 90.7 tons of meal per hour, controlled by cyclone C12, and exhausting to Stack 12.
 - (x) One (1) enclosed conveyor transferring meal from the meal dryer section 3 to the meal cooling operation, approved in 2009 for construction.
 - (y) One (1) meal cooling operation, identified as P12A, approved in 2009 for construction, with a nominal capacity of 90.7 tons of meal per hour, controlled by cyclone C12A, and exhausting to Stack 12A. This operation consists of the following:
 - (1) Two (2) meal cooler sections, exhausting to the common cyclone C12A and Stack 12A.
 - (2) One (1) Meal Cooler enclosed drag conveyor (or equivalent) that transfers meal from the Meal Cooler and the C12A Cyclone to the one (1) DTDC enclosed drag conveyor.
 - (3) One (1) DTDC enclosed drag conveyor (or equivalent) that transfers meal from the Meal Cooler/DTDC and four (4) DTDC cyclones (C10, C11, C12, C12A) to the meal surge bin conveyor.
- Under NESHAP, Subpart GGGG, these units are considered vegetable oil production processes.
- (z) One (1) meal handling process, identified as P9, approved in 1996 for construction and approved in 2016 for modification, with a nominal capacity of 90.7 tons of meal per hour, controlled by baghouse C9, and exhausting to Stack 9. This process consists of the following:
 - (1) One (1) totally enclosed conveyor that transfers the meal to the surge bin or the Screener.
 - (2) One (1) meal surge bin, with a nominal storage capacity of 19,000 cubic feet, that feeds to the recycle leg.
 - (3) One (1) elevator leg that transfers the meal to the sizing process.
 - (4) One (1) meal screener.
 - (5) Three (3) meal grinders.
 - (6) Three (3) meal grinding hoppers.
 - (7) One (1) totally enclosed drag conveyor (or equivalent) that transfers meal from the grinding hoppers to the meal mixing screw conveyor.

- (8) One (1) enclosed meal mixing screw conveyor (or equivalent) that transfers meal to the mixed meal elevator leg.
 - (9) One (1) mixed meal elevator leg.
 - (10) One (1) totally enclosed drag conveyor (or equivalent) that transfers meal from the mixed meal elevator leg to the meal storage tanks, load out bins and bulk weigh system.
- (aa) One (1) meal storage operation, identified as P20, approved in 1996 for construction, with a nominal throughput rate of 300 tons of meal per hour, controlled by baghouse C20, and exhausting to Stack 20. This operation consists of the following:
- (1) Meal storage tanks (capacity 292,000 cubic feet) and loadout bin (capacity 29,000 cubic feet), with a combined nominal storage capacity of 321,000 cubic feet.
 - (2) One (1) totally enclosed drag conveyor (or equivalent) that transfers soybean meal from the meal storage tanks to the meal elevator leg.
 - (3) One (1) meal elevator leg that operates at a nominal capacity of 300 tons per hour.
- (bb) One (1) truck meal loadout operation, identified as P14, approved in 1996 for construction, with a nominal throughput rate of 383.3 tons of meal per hour, controlled by baghouse C14, and exhausting to Stack 14. This operation consists of the following:
- (1) Three (3) totally enclosed drag conveyors (or equivalent) that transfer meal from the meal loadout bins to the truck.
 - (2) Two (2) truck loadout chutes, with only one chute having flow at any given time.
- (cc) One (1) barge/railcar meal loadout operation, identified as P15, approved in 1996 for construction, with a nominal throughput rate of 383.3 tons of meal per hour, controlled by baghouse C15, and exhausting to Stack 15. This operation consists of the following:
- (1) One (1) rail and barge loadout scalper with a totally enclosed ball breaker.
 - (2) One (1) rail and barge bulk weigh system consisting of one (1) upper garner, one (1) weigh hopper, and one (1) lower surge. The bulk weigh system is controlled by baghouse C15A, installed in 2013, exhausting to Stack 15A.
 - (3) One (1) totally enclosed drag conveyor (or equivalent) that transfers meal from the lower surge to rail or barge.
 - (4) Two (2) rail loadout systems, with only one system operating at a time.
 - (5) One (1) enclosed conveyor that transfers soybean meal from the lower surge to the barge loadout system.
 - (6) One (1) barge loadout system.
- (dd) Three (3) fixed roof hexane storage tanks.

- (1) Two (2) fixed roof hexane storage tanks, approved in 2013 for construction, each with a nominal storage capacity of 12,000 gallons.
- (2) One (1) horizontal fixed roof hexane storage tank, approved in 2012 for construction, with a nominal storage capacity of 28,000 gallons.

All hexane tanks are vented to the distillation system and exhausted through to Stack 13 (P13). Under NESHAP, Subpart GGGG, these tanks are considered vegetable oil production processes.

- (ee) One (1) fixed roof hexane work tank, approved in 1996 for construction, with a nominal storage capacity of 8,000 gallons. Under NESHAP, Subpart GGGG, this tank is considered a vegetable oil production process.

A.3 Specifically Regulated Insignificant Activities [326 IAC 2-7-1(21)] [326 IAC 2-7-4(c)]
[326 IAC 2-7-5(14)]

This stationary source also includes the following insignificant activities which are specifically regulated, as defined in 326 IAC 2-7-1(21):

- (a) Degreasing operations that do not exceed 145 gallons per twelve (12) months, except if subject to 326 IAC 20-6. [326 IAC 8-3-2] [326 IAC 8-3-8]
- (b) Paved and unpaved roads and parking lots with public access. [326 IAC 6-4]
- (c) Emergency generators as follows: one (1) natural gas-fired emergency generator, approved in 1997 for construction, with a maximum generating rate of 343 kilowatts. [40 CFR 63, Subpart ZZZZ]
- (d) Stationary fire pump engines as follows: two (2) diesel-fired pumps, one (1) approved in 1997 for construction and one (1) approved in 2012 for construction, each with a nominal power output rate of 305 hp. [40 CFR 60, Subpart IIII] [40 CFR 63, Subpart ZZZZ]
- (e) Two (2) natural gas-fired heaters, identified as Welfare Building Heaters 1 and 2, Welfare Building Heater 2 was constructed in 2008 and Welfare Building Heater 1 was constructed in 2011, each with a heat input capacity of 0.22 MMBtu/hr.

A.4 Part 70 Permit Applicability [326 IAC 2-7-2]

This stationary source is required to have a Part 70 permit by 326 IAC 2-7-2 (Applicability) because:

- (a) It is a major source, as defined in 326 IAC 2-7-1(22);
- (b) It is a source in a source category designated by the United States Environmental Protection Agency (U.S. EPA) under 40 CFR 70.3 (Part 70 - Applicability).

SECTION B

GENERAL CONDITIONS

B.1 Definitions [326 IAC 2-7-1]

Terms in this permit shall have the definition assigned to such terms in the referenced regulation. In the absence of definitions in the referenced regulation, the applicable definitions found in the statutes or regulations (IC 13-11, 326 IAC 1-2 and 326 IAC 2-7) shall prevail.

B.2 Permit Term [326 IAC 2-7-5(2)] [326 IAC 2-1.1-9.5] [326 IAC 2-7-4(a)(1)(D)] [IC 13-15-3-6(a)]

- (a) This permit, T129-31079-00035, is issued for a fixed term of five (5) years from the issuance date of this permit, as determined in accordance with IC 4-21.5-3-5(f) and IC 13-15-5-3. Subsequent revisions, modifications, or amendments of this permit do not affect the expiration date of this permit.
- (b) If IDEM, OAQ, upon receiving a timely and complete renewal permit application, fails to issue or deny the permit renewal prior to the expiration date of this permit, this existing permit shall not expire and all terms and conditions shall continue in effect, including any permit shield provided in 326 IAC 2-7-15, until the renewal permit has been issued or denied.

B.3 Term of Conditions [326 IAC 2-1.1-9.5]

Notwithstanding the permit term of a permit to construct, a permit to operate, or a permit modification, any condition established in a permit issued pursuant to a permitting program approved in the state implementation plan shall remain in effect until:

- (a) the condition is modified in a subsequent permit action pursuant to Title I of the Clean Air Act; or
- (b) the emission unit to which the condition pertains permanently ceases operation.

B.4 Enforceability [326 IAC 2-7-7] [IC 13-17-12]

Unless otherwise stated, all terms and conditions in this permit, including any provisions designed to limit the source's potential to emit, are enforceable by IDEM, the United States Environmental Protection Agency (U.S. EPA) and by citizens in accordance with the Clean Air Act.

B.5 Severability [326 IAC 2-7-5(5)]

The provisions of this permit are severable; a determination that any portion of this permit is invalid shall not affect the validity of the remainder of the permit.

B.6 Property Rights or Exclusive Privilege [326 IAC 2-7-5(6)(D)]

This permit does not convey any property rights of any sort or any exclusive privilege.

B.7 Duty to Provide Information [326 IAC 2-7-5(6)(E)]

- (a) The Permittee shall furnish to IDEM, OAQ, within a reasonable time, any information that IDEM, OAQ may request in writing to determine whether cause exists for modifying, revoking and reissuing, or terminating this permit, or to determine compliance with this permit. Upon request, the Permittee shall also furnish to IDEM, OAQ copies of records required to be kept by this permit.
- (b) For information furnished by the Permittee to IDEM, OAQ, the Permittee may include a claim of confidentiality in accordance with 326 IAC 17.1. When furnishing copies of requested records directly to U. S. EPA, the Permittee may assert a claim of confidentiality in accordance with 40 CFR 2, Subpart B.

B.8 Certification [326 IAC 2-7-4(f)] [326 IAC 2-7-6(1)] [326 IAC 2-7-5(3)(C)]

- (a) A certification required by this permit meets the requirements of 326 IAC 2-7-6(1) if:

- (1) it contains a certification by a "responsible official" as defined by 326 IAC 2-7-1(35), and
 - (2) the certification states that, based on information and belief formed after reasonable inquiry, the statements and information in the document are true, accurate, and complete.
- (b) The Permittee may use the attached Certification Form, or its equivalent with each submittal requiring certification. One (1) certification may cover multiple forms in one (1) submittal.
 - (c) A "responsible official" is defined at 326 IAC 2-7-1(35).

B.9 Annual Compliance Certification [326 IAC 2-7-6(5)]

- (a) The Permittee shall annually submit a compliance certification report which addresses the status of the source's compliance with the terms and conditions contained in this permit, including emission limitations, standards, or work practices. The initial certification shall cover the time period from the date of final permit issuance through December 31 of the same year. All subsequent certifications shall cover the time period from January 1 to December 31 of the previous year, and shall be submitted no later than July 1 of each year to:

Indiana Department of Environmental Management
Compliance and Enforcement Branch, Office of Air Quality
100 North Senate Avenue
MC 61-53 IGCN 1003
Indianapolis, Indiana 46204-2251

and

United States Environmental Protection Agency, Region V
Air and Radiation Division, Air Enforcement Branch - Indiana (AE-17J)
77 West Jackson Boulevard
Chicago, Illinois 60604-3590

- (b) The annual compliance certification report required by this permit shall be considered timely if the date postmarked on the envelope or certified mail receipt, or affixed by the shipper on the private shipping receipt, is on or before the date it is due. If the document is submitted by any other means, it shall be considered timely if received by IDEM, OAQ, on or before the date it is due.
- (c) The annual compliance certification report shall include the following:
 - (1) The appropriate identification of each term or condition of this permit that is the basis of the certification;
 - (2) The compliance status;
 - (3) Whether compliance was continuous or intermittent;
 - (4) The methods used for determining the compliance status of the source, currently and over the reporting period consistent with 326 IAC 2-7-5(3); and
 - (5) Such other facts, as specified in Sections D of this permit, as IDEM, OAQ may require to determine the compliance status of the source.

The submittal by the Permittee does require a certification that meets the requirements of 326 IAC 2-7-6(1) by a "responsible official" as defined by 326 IAC 2-7-1(35).

B.10 Preventive Maintenance Plan [326 IAC 2-7-5(12)] [326 IAC 1-6-3]

(a) A Preventive Maintenance Plan meets the requirements of 326 IAC 1-6-3 if it includes, at a minimum:

- (1) Identification of the individual(s) responsible for inspecting, maintaining, and repairing emission control devices;
- (2) A description of the items or conditions that will be inspected and the inspection schedule for said items or conditions; and
- (3) Identification and quantification of the replacement parts that will be maintained in inventory for quick replacement.

The Permittee shall implement the PMPs.

(b) If required by specific condition(s) in Section D of this permit where no PMP was previously required, the Permittee shall prepare and maintain Preventive Maintenance Plans (PMPs) no later than ninety (90) days after issuance of this permit or ninety (90) days after initial start-up, whichever is later, including the following information on each facility:

- (1) Identification of the individual(s) responsible for inspecting, maintaining, and repairing emission control devices;
- (2) A description of the items or conditions that will be inspected and the inspection schedule for said items or conditions; and
- (3) Identification and quantification of the replacement parts that will be maintained in inventory for quick replacement.

If, due to circumstances beyond the Permittee's control, the PMPs cannot be prepared and maintained within the above time frame, the Permittee may extend the date an additional ninety (90) days provided the Permittee notifies:

Indiana Department of Environmental Management
Compliance and Enforcement Branch, Office of Air Quality
100 North Senate Avenue
MC 61-53 IGCN 1003
Indianapolis, Indiana 46204-2251

The PMP extension notification does not require a certification that meets the requirements of 326 IAC 2-7-6(1) by a "responsible official" as defined by 326 IAC 2-7-1(35).

The Permittee shall implement the PMPs.

(c) A copy of the PMPs shall be submitted to IDEM, OAQ upon request and within a reasonable time, and shall be subject to review and approval by IDEM, OAQ. IDEM, OAQ may require the Permittee to revise its PMPs whenever lack of proper maintenance causes or is the primary contributor to an exceedance of any limitation on emissions. The PMPs and their submittal do not require a certification that meets the requirements of 326 IAC 2-7-6(1) by a "responsible official" as defined by 326 IAC 2-7-1(35).

- (d) To the extent the Permittee is required by 40 CFR Part 60/63 to have an Operation Maintenance, and Monitoring (OMM) Plan for a unit, such Plan is deemed to satisfy the PMP requirements of 326 IAC 1-6-3 for that unit.

B.11 Emergency Provisions [326 IAC 2-7-16]

- (a) An emergency, as defined in 326 IAC 2-7-1(12), is not an affirmative defense for an action brought for noncompliance with a federal or state health-based emission limitation.

- (b) An emergency, as defined in 326 IAC 2-7-1(12), constitutes an affirmative defense to an action brought for noncompliance with a technology-based emission limitation if the affirmative defense of an emergency is demonstrated through properly signed, contemporaneous operating logs or other relevant evidence that describe the following:

- (1) An emergency occurred and the Permittee can, to the extent possible, identify the causes of the emergency;
- (2) The permitted facility was at the time being properly operated;
- (3) During the period of an emergency, the Permittee took all reasonable steps to minimize levels of emissions that exceeded the emission standards or other requirements in this permit;
- (4) For each emergency lasting one (1) hour or more, the Permittee notified IDEM, OAQ, or Southwest Regional Office or Southeast Regional Office within four (4) daytime business hours after the beginning of the emergency, or after the emergency was discovered or reasonably should have been discovered;

Telephone Number: 1-800-451-6027 (ask for Office of Air Quality, Compliance and Enforcement Branch), or
Telephone Number: 317-233-0178 (ask for Office of Air Quality, Compliance and Enforcement Branch)
Facsimile Number: 317-233-6865
Southwest Regional Office phone: (812) 380-2305; fax: (812) 380-2304.
Southeast Regional Office phone: (812) 358-2027; fax: (812) 358-2058.

- (5) For each emergency lasting one (1) hour or more, the Permittee submitted the attached Emergency Occurrence Report Form or its equivalent, either by mail or facsimile to:

Indiana Department of Environmental Management
Compliance and Enforcement Branch, Office of Air Quality
100 North Senate Avenue
MC 61-53 IGCN 1003
Indianapolis, Indiana 46204-2251

within two (2) working days of the time when emission limitations were exceeded due to the emergency.

The notice fulfills the requirement of 326 IAC 2-7-5(3)(C)(ii) and must contain the following:

- (A) A description of the emergency;
- (B) Any steps taken to mitigate the emissions; and

(C) Corrective actions taken.

The notification which shall be submitted by the Permittee does not require a certification that meets the requirements of 326 IAC 2-7-6(1) by a "responsible official" as defined by 326 IAC 2-7-1(35).

- (6) The Permittee immediately took all reasonable steps to correct the emergency.
- (c) In any enforcement proceeding, the Permittee seeking to establish the occurrence of an emergency has the burden of proof.
- (d) This emergency provision supersedes 326 IAC 1-6 (Malfunctions). This permit condition is in addition to any emergency or upset provision contained in any applicable requirement.
- (e) The Permittee seeking to establish the occurrence of an emergency shall make records available upon request to ensure that failure to implement a PMP did not cause or contribute to an exceedance of any limitations on emissions. However, IDEM, OAQ may require that the Preventive Maintenance Plans required under 326 IAC 2-7-4(c)(8) be revised in response to an emergency.
- (f) Failure to notify IDEM, OAQ by telephone or facsimile of an emergency lasting more than one (1) hour in accordance with (b)(4) and (5) of this condition shall constitute a violation of 326 IAC 2-7 and any other applicable rules.
- (g) If the emergency situation causes a deviation from a technology-based limit, the Permittee may continue to operate the affected emitting facilities during the emergency provided the Permittee immediately takes all reasonable steps to correct the emergency and minimize emissions.

B.12 Permit Shield [326 IAC 2-7-15] [326 IAC 2-7-20] [326 IAC 2-7-12]

- (a) Pursuant to 326 IAC 2-7-15, the Permittee has been granted a permit shield. The permit shield provides that compliance with the conditions of this permit shall be deemed compliance with any applicable requirements as of the date of permit issuance, provided that either the applicable requirements are included and specifically identified in this permit or the permit contains an explicit determination or concise summary of a determination that other specifically identified requirements are not applicable. The Indiana statutes from IC 13 and rules from 326 IAC, referenced in conditions in this permit, are those applicable at the time the permit was issued. The issuance or possession of this permit shall not alone constitute a defense against an alleged violation of any law, regulation or standard, except for the requirement to obtain a Part 70 permit under 326 IAC 2-7 or for applicable requirements for which a permit shield has been granted.

This permit shield does not extend to applicable requirements which are promulgated after the date of issuance of this permit unless this permit has been modified to reflect such new requirements.

- (b) If, after issuance of this permit, it is determined that the permit is in nonconformance with an applicable requirement that applied to the source on the date of permit issuance, IDEM, OAQ, shall immediately take steps to reopen and revise this permit and issue a compliance order to the Permittee to ensure expeditious compliance with the applicable requirement until the permit is reissued. The permit shield shall continue in effect so long as the Permittee is in compliance with the compliance order.

- (c) No permit shield shall apply to any permit term or condition that is determined after issuance of this permit to have been based on erroneous information supplied in the permit application. Erroneous information means information that the Permittee knew to be false, or in the exercise of reasonable care should have been known to be false, at the time the information was submitted.
- (d) Nothing in 326 IAC 2-7-15 or in this permit shall alter or affect the following:
 - (1) The provisions of Section 303 of the Clean Air Act (emergency orders), including the authority of the U.S. EPA under Section 303 of the Clean Air Act;
 - (2) The liability of the Permittee for any violation of applicable requirements prior to or at the time of this permit's issuance;
 - (3) The applicable requirements of the acid rain program, consistent with Section 408(a) of the Clean Air Act; and
 - (4) The ability of U.S. EPA to obtain information from the Permittee under Section 114 of the Clean Air Act.
- (e) This permit shield is not applicable to any change made under 326 IAC 2-7-20(b)(2) (Sections 502(b)(10) of the Clean Air Act changes) and 326 IAC 2-7-20(c)(2) (trading based on State Implementation Plan (SIP) provisions).
- (f) This permit shield is not applicable to modifications eligible for group processing until after IDEM, OAQ, has issued the modifications. [326 IAC 2-7-12(c)(7)]
- (g) This permit shield is not applicable to minor Part 70 permit modifications until after IDEM, OAQ, has issued the modification. [326 IAC 2-7-12(b)(8)]

B.13 Prior Permits Superseded [326 IAC 2-1.1-9.5] [326 IAC 2-7-10.5]

- (a) All terms and conditions of permits established prior to T129-31079-00035 and issued pursuant to permitting programs approved into the state implementation plan have been either:
 - (1) incorporated as originally stated,
 - (2) revised under 326 IAC 2-7-10.5, or
 - (3) deleted under 326 IAC 2-7-10.5.
- (b) Provided that all terms and conditions are accurately reflected in this permit, all previous registrations and permits are superseded by this Part 70 operating permit.

B.14 Termination of Right to Operate [326 IAC 2-7-10] [326 IAC 2-7-4(a)]

The Permittee's right to operate this source terminates with the expiration of this permit unless a timely and complete renewal application is submitted at least nine (9) months prior to the date of expiration of the source's existing permit, consistent with 326 IAC 2-7-3 and 326 IAC 2-7-4(a).

B.15 Permit Modification, Reopening, Revocation and Reissuance, or Termination
[326 IAC 2-7-5(6)(C)] [326 IAC 2-7-8(a)] [326 IAC 2-7-9]

- (a) This permit may be modified, reopened, revoked and reissued, or terminated for cause. The filing of a request by the Permittee for a Part 70 Operating Permit modification, revocation and reissuance, or termination, or of a notification of planned changes or anticipated noncompliance does not stay any condition of this permit. [326 IAC 2-7-5(6)(C)] The notification by the Permittee does require a certification that meets the requirements of 326 IAC 2-7-6(1) by a "responsible official" as defined by 326 IAC 2-7-1(35).
- (b) This permit shall be reopened and revised under any of the circumstances listed in IC 13-15-7-2 or if IDEM, OAQ determines any of the following:
 - (1) That this permit contains a material mistake.
 - (2) That inaccurate statements were made in establishing the emissions standards or other terms or conditions.
 - (3) That this permit must be revised or revoked to assure compliance with an applicable requirement. [326 IAC 2-7-9(a)(3)]
- (c) Proceedings by IDEM, OAQ to reopen and revise this permit shall follow the same procedures as apply to initial permit issuance and shall affect only those parts of this permit for which cause to reopen exists. Such reopening and revision shall be made as expeditiously as practicable. [326 IAC 2-7-9(b)]
- (d) The reopening and revision of this permit, under 326 IAC 2-7-9(a), shall not be initiated before notice of such intent is provided to the Permittee by IDEM, OAQ at least thirty (30) days in advance of the date this permit is to be reopened, except that IDEM, OAQ may provide a shorter time period in the case of an emergency. [326 IAC 2-7-9(c)]

B.16 Permit Renewal [326 IAC 2-7-3] [326 IAC 2-7-4] [326 IAC 2-7-8(e)]

- (a) The application for renewal shall be submitted using the application form or forms prescribed by IDEM, OAQ and shall include the information specified in 326 IAC 2-7-4. Such information shall be included in the application for each emission unit at this source, except those emission units included on the trivial or insignificant activities list contained in 326 IAC 2-7-1(21) and 326 IAC 2-7-1(40). The renewal application does require a certification that meets the requirements of 326 IAC 2-7-6(1) by a "responsible official" as defined by 326 IAC 2-7-1(35).

Request for renewal shall be submitted to:

Indiana Department of Environmental Management
Permit Administration and Support Section, Office of Air Quality
100 North Senate Avenue
MC 61-53 IGCN 1003
Indianapolis, Indiana 46204-2251

- (b) A timely renewal application is one that is:
 - (1) Submitted at least nine (9) months prior to the date of the expiration of this permit; and

(2) If the date postmarked on the envelope or certified mail receipt, or affixed by the shipper on the private shipping receipt, is on or before the date it is due. If the document is submitted by any other means, it shall be considered timely if received by IDEM, OAQ on or before the date it is due.

(c) If the Permittee submits a timely and complete application for renewal of this permit, the source's failure to have a permit is not a violation of 326 IAC 2-7 until IDEM, OAQ takes final action on the renewal application, except that this protection shall cease to apply if, subsequent to the completeness determination, the Permittee fails to submit by the deadline specified, pursuant to 326 IAC 2-7-4(a)(2)(D), in writing by IDEM, OAQ any additional information identified as being needed to process the application.

B.17 Permit Amendment or Modification [326 IAC 2-7-11] [326 IAC 2-7-12]

(a) Permit amendments and modifications are governed by the requirements of 326 IAC 2-7-11 or 326 IAC 2-7-12 whenever the Permittee seeks to amend or modify this permit.

(b) Any application requesting an amendment or modification of this permit shall be submitted to:

Indiana Department of Environmental Management
Permit Administration and Support Section, Office of Air Quality
100 North Senate Avenue
MC 61-53 IGCN 1003
Indianapolis, Indiana 46204-2251

Any such application does require a certification that meets the requirements of 326 IAC 2-7-6(1) by a "responsible official" as defined by 326 IAC 2-7-1(35).

(c) The Permittee may implement administrative amendment changes addressed in the request for an administrative amendment immediately upon submittal of the request. [326 IAC 2-7-11(c)(3)]

B.18 Permit Revision Under Economic Incentives and Other Programs [326 IAC 2-7-5(8)] [326 IAC 2-7-12(b)(2)]

(a) No Part 70 permit revision or notice shall be required under any approved economic incentives, marketable Part 70 permits, emissions trading, and other similar programs or processes for changes that are provided for in a Part 70 permit.

(b) Notwithstanding 326 IAC 2-7-12(b)(1) and 326 IAC 2-7-12(c)(1), minor Part 70 permit modification procedures may be used for Part 70 modifications involving the use of economic incentives, marketable Part 70 permits, emissions trading, and other similar approaches to the extent that such minor Part 70 permit modification procedures are explicitly provided for in the applicable State Implementation Plan (SIP) or in applicable requirements promulgated or approved by the U.S. EPA.

B.19 Operational Flexibility [326 IAC 2-7-20] [326 IAC 2-7-10.5]

(a) The Permittee may make any change or changes at the source that are described in 326 IAC 2-7-20(b) or (c) without a prior permit revision, if each of the following conditions is met:

(1) The changes are not modifications under any provision of Title I of the Clean Air Act;

(2) Any preconstruction approval required by 326 IAC 2-7-10.5 has been obtained;

(3) The changes do not result in emissions which exceed the limitations provided in this permit (whether expressed herein as a rate of emissions or in terms of total emissions);

(4) The Permittee notifies the:

Indiana Department of Environmental Management
Permit Administration and Support Section, Office of Air Quality
100 North Senate Avenue
MC 61-53 IGCN 1003
Indianapolis, Indiana 46204-2251

and

United States Environmental Protection Agency, Region V
Air and Radiation Division, Regulation Development Branch - Indiana (AR-18J)
77 West Jackson Boulevard
Chicago, Illinois 60604-3590

in advance of the change by written notification at least ten (10) days in advance of the proposed change. The Permittee shall attach every such notice to the Permittee's copy of this permit; and

(5) The Permittee maintains records on-site, on a rolling five (5) year basis, which document all such changes and emission trades that are subject to 326 IAC 2-7-20(b) or (c). The Permittee shall make such records available, upon reasonable request, for public review.

Such records shall consist of all information required to be submitted to IDEM, OAQ in the notices specified in 326 IAC 2-7-20(b)(1) and (c)(1).

(b) The Permittee may make Section 502(b)(10) of the Clean Air Act changes (this term is defined at 326 IAC 2-7-1(36)) without a permit revision, subject to the constraint of 326 IAC 2-7-20(a). For each such Section 502(b)(10) of the Clean Air Act change, the required written notification shall include the following:

- (1) A brief description of the change within the source;
- (2) The date on which the change will occur;
- (3) Any change in emissions; and
- (4) Any permit term or condition that is no longer applicable as a result of the change.

The notification which shall be submitted is not considered an application form, report or compliance certification. Therefore, the notification by the Permittee does not require a certification that meets the requirements of 326 IAC 2-7-6(1) by a "responsible official" as defined by 326 IAC 2-7-1(35).

(c) Emission Trades [326 IAC 2-7-20(c)]
The Permittee may trade emissions increases and decreases at the source, where the applicable SIP provides for such emission trades without requiring a permit revision, subject to the constraints of Section (a) of this condition and those in 326 IAC 2-7-20(c).

- (d) **Alternative Operating Scenarios [326 IAC 2-7-20(d)]**
The Permittee may make changes at the source within the range of alternative operating scenarios that are described in the terms and conditions of this permit in accordance with 326 IAC 2-7-5(9). No prior notification of IDEM, OAQ, or U.S. EPA is required.
- (e) Backup fuel switches specifically addressed in, and limited under, Section D of this permit shall not be considered alternative operating scenarios. Therefore, the notification requirements of part (a) of this condition do not apply.

B.20 Source Modification Requirement [326 IAC 2-7-10.5]

A modification, construction, or reconstruction is governed by the requirements of 326 IAC 2.

B.21 Inspection and Entry [326 IAC 2-7-6] [IC 13-14-2-2] [IC 13-30-3-1] [IC 13-17-3-2]

Upon presentation of proper identification cards, credentials, and other documents as may be required by law, and subject to the Permittee's right under all applicable laws and regulations to assert that the information collected by the agency is confidential and entitled to be treated as such, the Permittee shall allow IDEM, OAQ, U.S. EPA, or an authorized representative to perform the following:

- (a) Enter upon the Permittee's premises where a Part 70 source is located, or emissions related activity is conducted, or where records must be kept under the conditions of this permit;
- (b) As authorized by the Clean Air Act, IC 13-14-2-2, IC 13-17-3-2, and IC 13-30-3-1, have access to and copy any records that must be kept under the conditions of this permit;
- (c) As authorized by the Clean Air Act, IC 13-14-2-2, IC 13-17-3-2, and IC 13-30-3-1, inspect any facilities, equipment (including monitoring and air pollution control equipment), practices, or operations regulated or required under this permit;
- (d) As authorized by the Clean Air Act, IC 13-14-2-2, IC 13-17-3-2, and IC 13-30-3-1, sample or monitor substances or parameters for the purpose of assuring compliance with this permit or applicable requirements; and
- (e) As authorized by the Clean Air Act, IC 13-14-2-2, IC 13-17-3-2, and IC 13-30-3-1, utilize any photographic, recording, testing, monitoring, or other equipment for the purpose of assuring compliance with this permit or applicable requirements.

B.22 Transfer of Ownership or Operational Control [326 IAC 2-7-11]

- (a) The Permittee must comply with the requirements of 326 IAC 2-7-11 whenever the Permittee seeks to change the ownership or operational control of the source and no other change in the permit is necessary.
- (b) Any application requesting a change in the ownership or operational control of the source shall contain a written agreement containing a specific date for transfer of permit responsibility, coverage and liability between the current and new Permittee. The application shall be submitted to:

Indiana Department of Environmental Management
Permit Administration and Support Section, Office of Air Quality
100 North Senate Avenue
MC 61-53 IGCN 1003
Indianapolis, Indiana 46204-2251

Any such application does require a certification that meets the requirements of 326 IAC 2-7-6(1) by a "responsible official" as defined by 326 IAC 2-7-1(35).

- (c) The Permittee may implement administrative amendment changes addressed in the request for an administrative amendment immediately upon submittal of the request. [326 IAC 2-7-11(c)(3)]

B.23 Annual Fee Payment [326 IAC 2-7-19] [326 IAC 2-7-5(7)] [326 IAC 2-1.1-7]

- (a) The Permittee shall pay annual fees to IDEM, OAQ within thirty (30) calendar days of receipt of a billing. Pursuant to 326 IAC 2-7-19(b), if the Permittee does not receive a bill from IDEM, OAQ the applicable fee is due April 1 of each year.
- (b) Except as provided in 326 IAC 2-7-19(e), failure to pay may result in administrative enforcement action or revocation of this permit.
- (c) The Permittee may call the following telephone numbers: 1-800-451-6027 or 317-233-4230 (ask for OAQ, Billing, Licensing, and Training Section), to determine the appropriate permit fee.

B.24 Credible Evidence [326 IAC 2-7-5(3)] [326 IAC 2-7-6] [62 FR 8314] [326 IAC 1-1-6]

For the purpose of submitting compliance certifications or establishing whether or not the Permittee has violated or is in violation of any condition of this permit, nothing in this permit shall preclude the use, including the exclusive use, of any credible evidence or information relevant to whether the Permittee would have been in compliance with the condition of this permit if the appropriate performance or compliance test or procedure had been performed.

SECTION C

SOURCE OPERATION CONDITIONS

Entire Source

Emission Limitations and Standards [326 IAC 2-7-5(1)]

C.1 Particulate Emission Limitations For Processes with Process Weight Rates Less Than One Hundred (100) Pounds per Hour [326 IAC 6-3-2]

Pursuant to 326 IAC 6-3-2(e)(2), particulate emissions from any process not exempt under 326 IAC 6-3-1(b) or (c) which has a maximum process weight rate less than 100 pounds per hour and the methods in 326 IAC 6-3-2(b) through (d) do not apply shall not exceed 0.551 pounds per hour.

C.2 Opacity [326 IAC 5-1]

Pursuant to 326 IAC 5-1-2 (Opacity Limitations), except as provided in 326 IAC 5-1-1 (Applicability) and 326 IAC 5-1-3 (Temporary Alternative Opacity Limitations), opacity shall meet the following, unless otherwise stated in this permit:

- (a) Opacity shall not exceed an average of forty percent (40%) in any one (1) six (6) minute averaging period as determined in 326 IAC 5-1-4.
- (b) Opacity shall not exceed sixty percent (60%) for more than a cumulative total of fifteen (15) minutes (sixty (60) readings as measured according to 40 CFR 60, Appendix A, Method 9 or fifteen (15) one (1) minute nonoverlapping integrated averages for a continuous opacity monitor) in a six (6) hour period.

C.3 Open Burning [326 IAC 4-1] [IC 13-17-9]

The Permittee shall not open burn any material except as provided in 326 IAC 4-1-3, 326 IAC 4-1-4 or 326 IAC 4-1-6. The previous sentence notwithstanding, the Permittee may open burn in accordance with an open burning approval issued by the Commissioner under 326 IAC 4-1-4.1.

C.4 Incineration [326 IAC 4-2] [326 IAC 9-1-2]

The Permittee shall not operate an incinerator except as provided in 326 IAC 4-2 or in this permit. The Permittee shall not operate a refuse incinerator or refuse burning equipment except as provided in 326 IAC 9-1-2 or in this permit.

C.5 Fugitive Dust Emissions [326 IAC 6-4]

The Permittee shall not allow fugitive dust to escape beyond the property line or boundaries of the property, right-of-way, or easement on which the source is located, in a manner that would violate 326 IAC 6-4 (Fugitive Dust Emissions). 326 IAC 6-4-2(4) is not federally enforceable.

C.6 Stack Height [326 IAC 1-7]

The Permittee shall comply with the applicable provisions of 326 IAC 1-7 (Stack Height Provisions), for all exhaust stacks through which a potential (before controls) of twenty-five (25) tons per year or more of particulate matter or sulfur dioxide is emitted. The provisions of 326 IAC 1-7-1(3), 326 IAC 1-7-2, 326 IAC 1-7-3(c) and (d), 326 IAC 1-7-4, and 326 IAC 1-7-5(a), (b), and (d) are not federally enforceable.

C.7 Asbestos Abatement Projects [326 IAC 14-10] [326 IAC 18] [40 CFR 61, Subpart M]

The Permittee shall comply with the applicable requirements of 326 IAC 14-10, 326 IAC 18, and 40 CFR 61.140.

Testing Requirements [326 IAC 2-7-6(1)]

C.8 Performance Testing [326 IAC 3-6]

- (a) For performance testing required by this permit, a test protocol, except as provided elsewhere in this permit, shall be submitted to:

Indiana Department of Environmental Management
Compliance and Enforcement Branch, Office of Air Quality
100 North Senate Avenue
MC 61-53 IGCN 1003
Indianapolis, Indiana 46204-2251

no later than thirty-five (35) days prior to the intended test date. The protocol submitted by the Permittee does not require a certification that meets the requirements of 326 IAC 2-7-6(1) by a "responsible official" as defined by 326 IAC 2-7-1(35).

- (b) The Permittee shall notify IDEM, OAQ of the actual test date at least fourteen (14) days prior to the actual test date. The notification submitted by the Permittee does not require a certification that meets the requirements of 326 IAC 2-7-6(1) by a "responsible official" as defined by 326 IAC 2-7-1(35).
- (c) Pursuant to 326 IAC 3-6-4(b), all test reports must be received by IDEM, OAQ not later than forty-five (45) days after the completion of the testing. An extension may be granted by IDEM, OAQ if the Permittee submits to IDEM, OAQ a reasonable written explanation not later than five (5) days prior to the end of the initial forty-five (45) day period.

Compliance Requirements [326 IAC 2-1.1-11]

C.9 Compliance Requirements [326 IAC 2-1.1-11]

The commissioner may require stack testing, monitoring, or reporting at any time to assure compliance with all applicable requirements by issuing an order under 326 IAC 2-1.1-11. Any monitoring or testing shall be performed in accordance with 326 IAC 3 or other methods approved by the commissioner or the U. S. EPA.

Compliance Monitoring Requirements [326 IAC 2-7-5(1)] [326 IAC 2-7-6(1)]

C.10 Compliance Monitoring [326 IAC 2-7-5(3)] [326 IAC 2-7-6(1)] [40 CFR 64] [326 IAC 3-8]

- (a) For new units:

Unless otherwise specified in the approval for the new emission unit(s), compliance monitoring for new emission units shall be implemented on and after the date of initial start-up.

- (b) For existing units:

Unless otherwise specified in this permit, for all monitoring requirements not already legally required, the Permittee shall be allowed up to ninety (90) days from the date of permit issuance, to begin such monitoring. If due to circumstances beyond the Permittee's control, any monitoring equipment required by this permit cannot be installed and operated no later than ninety (90) days after permit issuance, the Permittee may extend the compliance schedule related to the equipment for an additional ninety (90) days provided the Permittee notifies:

Indiana Department of Environmental Management
Compliance and Enforcement Branch, Office of Air Quality
100 North Senate Avenue
MC 61-53 IGCN 1003
Indianapolis, Indiana 46204-2251

in writing, prior to the end of the initial ninety (90) day compliance schedule, with full justification of the reasons for the inability to meet this date.

The notification which shall be submitted by the Permittee does require a certification that meets the requirements of 326 IAC 2-7-6(1) by a "responsible official" as defined by 326 IAC 2-7-1(35).

- (c) For monitoring required by CAM, at all times, the Permittee shall maintain the monitoring, including but not limited to, maintaining necessary parts for routine repairs of the monitoring equipment.
- (d) For monitoring required by CAM, except for, as applicable, monitoring malfunctions, associated repairs, and required quality assurance or control activities (including, as applicable, calibration checks and required zero and span adjustments), the Permittee shall conduct all monitoring in continuous operation (or shall collect data at all required intervals) at all times that the pollutant-specific emissions unit is operating. Data recorded during monitoring malfunctions, associated repairs, and required quality assurance or control activities shall not be used for purposes of this part, including data averages and calculations, or fulfilling a minimum data availability requirement, if applicable. The owner or operator shall use all the data collected during all other periods in assessing the operation of the control device and associated control system. A monitoring malfunction is any sudden, infrequent, not reasonably preventable failure of the monitoring to provide valid data. Monitoring failures that are caused in part by poor maintenance or careless operation are not malfunctions.

C.11 Instrument Specifications [326 IAC 2-1.1-11] [326 IAC 2-7-5(3)] [326 IAC 2-7-6(1)]

- (a) When required by any condition of this permit, an analog instrument used to measure a parameter related to the operation of an air pollution control device shall have a scale such that the expected maximum reading for the normal range shall be no less than twenty percent (20%) of full scale. The analog instrument shall be capable of measuring values outside of the normal range.
- (b) The Permittee may request that the IDEM, OAQ approve the use of an instrument that does not meet the above specifications provided the Permittee can demonstrate that an alternative instrument specification will adequately ensure compliance with permit conditions requiring the measurement of the parameters.

Corrective Actions and Response Steps [326 IAC 2-7-5] [326 IAC 2-7-6]

C.12 Emergency Reduction Plans [326 IAC 1-5-2] [326 IAC 1-5-3]

Pursuant to 326 IAC 1-5-2 (Emergency Reduction Plans; Submission):

- (a) The Permittee shall maintain the most recently submitted written emergency reduction plans (ERPs) consistent with safe operating procedures.
- (b) Upon direct notification by IDEM, OAQ that a specific air pollution episode level is in effect, the Permittee shall immediately put into effect the actions stipulated in the approved ERP for the appropriate episode level. [326 IAC 1-5-3]

C.13 Risk Management Plan [326 IAC 2-7-5(11)] [40 CFR 68]

If a regulated substance, as defined in 40 CFR 68, is present at a source in more than a threshold quantity, the Permittee must comply with the applicable requirements of 40 CFR 68.

C.14 Response to Excursions or Exceedances [326 IAC 2-7-5] [326 IAC 2-7-6] [40 CFR 64]
[326 IAC 3-8]

- (I) Upon detecting an excursion where a response step is required by the D Section or an exceedance of a limitation in this permit:
 - (a) The Permittee shall take reasonable response steps to restore operation of the emissions unit (including any control device and associated capture system) to its normal or usual manner of operation as expeditiously as practicable in accordance with good air pollution control practices for minimizing excess emissions.
 - (b) The response shall include minimizing the period of any startup, shutdown or malfunction. The response may include, but is not limited to, the following:
 - (1) initial inspection and evaluation;
 - (2) recording that operations returned or are returning to normal without operator action (such as through response by a computerized distribution control system); or
 - (3) any necessary follow-up actions to return operation to normal or usual manner of operation.
 - (c) A determination of whether the Permittee has used acceptable procedures in response to an excursion or exceedance will be based on information available, which may include, but is not limited to, the following:
 - (1) monitoring results;
 - (2) review of operation and maintenance procedures and records; and/or
 - (3) inspection of the control device, associated capture system, and the process.
 - (d) Failure to take reasonable response steps shall be considered a deviation from the permit.
 - (e) The Permittee shall record the reasonable response steps taken.
- (II)
 - (a) *CAM Response to excursions or exceedances.*

- (1) Upon detecting an excursion or exceedance, subject to CAM, the Permittee shall restore operation of the pollutant-specific emissions unit (including the control device and associated capture system) to its normal or usual manner of operation as expeditiously as practicable in accordance with good air pollution control practices for minimizing emissions. The response shall include minimizing the period of any startup, shutdown or malfunction and taking any necessary corrective actions to restore normal operation and prevent the likely recurrence of the cause of an excursion or exceedance (other than those caused by excused startup or shutdown conditions). Such actions may include initial inspection and evaluation, recording that operations returned to normal without operator action (such as through response by a computerized distribution control system), or any necessary follow-up actions to return operation to within the indicator range, designated condition, or below the applicable emission limitation or standard, as applicable.
 - (2) Determination of whether the Permittee has used acceptable procedures in response to an excursion or exceedance will be based on information available, which may include but is not limited to, monitoring results, review of operation and maintenance procedures and records, and inspection of the control device, associated capture system, and the process.
- (b) If the Permittee identifies a failure to achieve compliance with an emission limitation, subject to CAM, or standard, subject to CAM, for which the approved monitoring did not provide an indication of an excursion or exceedance while providing valid data, or the results of compliance or performance testing document a need to modify the existing indicator ranges or designated conditions, the Permittee shall promptly notify the IDEM, OAQ and, if necessary, submit a proposed significant permit modification to this permit to address the necessary monitoring changes. Such a modification may include, but is not limited to, reestablishing indicator ranges or designated conditions, modifying the frequency of conducting monitoring and collecting data, or the monitoring of additional parameters.
 - (c) Based on the results of a determination made under paragraph (II)(a)(2) of this condition, the EPA or IDEM, OAQ may require the Permittee to develop and implement a QIP. The Permittee shall develop and implement a QIP if notified to in writing by the EPA or IDEM, OAQ.
 - (d) Elements of a QIP:
The Permittee shall maintain a written QIP, if required, and have it available for inspection. The plan shall conform to 40 CFR 64.8 b (2).
 - (e) If a QIP is required, the Permittee shall develop and implement a QIP as expeditiously as practicable and shall notify the IDEM, OAQ if the period for completing the improvements contained in the QIP exceeds 180 days from the date on which the need to implement the QIP was determined.
 - (f) Following implementation of a QIP, upon any subsequent determination pursuant to paragraph (II)(a)(2) of this condition the EPA or the IDEM, OAQ may require that the Permittee make reasonable changes to the QIP if the QIP is found to have:

- (1) Failed to address the cause of the control device performance problems;
or
 - (2) Failed to provide adequate procedures for correcting control device performance problems as expeditiously as practicable in accordance with good air pollution control practices for minimizing emissions.
- (g) Implementation of a QIP shall not excuse the Permittee from compliance with any existing emission limitation or standard, or any existing monitoring, testing, reporting or record keeping requirement that may apply under federal, state, or local law, or any other applicable requirements under the Act.
- (h) *CAM record keeping requirements.*
- (1) The Permittee shall maintain records of monitoring data, monitor performance data, corrective actions taken, any written quality improvement plan required pursuant to paragraph (II)(a)(2) of this condition and any activities undertaken to implement a quality improvement plan, and other supporting information required to be maintained under this condition (such as data used to document the adequacy of monitoring, or records of monitoring maintenance or corrective actions). Section C - General Record Keeping Requirements of this permit contains the Permittee's obligations with regard to the records required by this condition.
 - (2) Instead of paper records, the owner or operator may maintain records on alternative media, such as microfilm, computer files, magnetic tape disks, or microfiche, provided that the use of such alternative media allows for expeditious inspection and review, and does not conflict with other applicable record keeping requirements.

C.15 Actions Related to Noncompliance Demonstrated by a Stack Test [326 IAC 2-7-5] [326 IAC 2-7-6]

- (a) When the results of a stack test performed in conformance with Section C - Performance Testing, of this permit exceed the level specified in any condition of this permit, the Permittee shall submit a description of its response actions to IDEM, OAQ, no later than seventy-five (75) days after the date of the test.
- (b) A retest to demonstrate compliance shall be performed no later than one hundred eighty (180) days after the date of the test. Should the Permittee demonstrate to IDEM, OAQ that retesting in one hundred eighty (180) days is not practicable, IDEM, OAQ may extend the retesting deadline
- (c) IDEM, OAQ reserves the authority to take any actions allowed under law in response to noncompliant stack tests.

The response action documents submitted pursuant to this condition do require a certification that meets the requirements of 326 IAC 2-7-6(1) by a "responsible official" as defined by 326 IAC 2-7-1(35).

Record Keeping and Reporting Requirements [326 IAC 2-7-5(3)] [326 IAC 2-7-19]

C.16 Emission Statement [326 IAC 2-7-5(3)(C)(iii)] [326 IAC 2-7-5(7)] [326 IAC 2-7-19(c)] [326 IAC 2-6]

Pursuant to 326 IAC 2-6-3(b)(3), starting in 2006 and every three (3) years thereafter, the Permittee shall submit by July 1 an emission statement covering the previous calendar year. The emission statement shall contain, at a minimum, the information specified in 326 IAC 2-6-4(c) and shall meet the following requirements:

- (1) Indicate estimated actual emissions of all pollutants listed in 326 IAC 2-6-4(a);
- (2) Indicate estimated actual emissions of regulated pollutants as defined by 326 IAC 2-7-1(32) ("Regulated pollutant, which is used only for purposes of Section 19 of this rule") from the source, for purpose of fee assessment.

The statement must be submitted to:

Indiana Department of Environmental Management
Technical Support and Modeling Section, Office of Air Quality
100 North Senate Avenue
MC 61-50 IGCN 1003
Indianapolis, Indiana 46204-2251

The emission statement does require a certification that meets the requirements of 326 IAC 2-7-6(1) by a "responsible official" as defined by 326 IAC 2-7-1(35).

C.17 General Record Keeping Requirements [326 IAC 2-7-5(3)] [326 IAC 2-7-6]

- (a) Records of all required monitoring data, reports and support information required by this permit shall be retained for a period of at least five (5) years from the date of monitoring sample, measurement, report, or application. Support information includes the following, where applicable:

- (AA) All calibration and maintenance records.
- (BB) All original strip chart recordings for continuous monitoring instrumentation.
- (CC) Copies of all reports required by the Part 70 permit.

Records of required monitoring information include the following, where applicable:

- (AA) The date, place, as defined in this permit, and time of sampling or measurements.
- (BB) The dates analyses were performed.
- (CC) The company or entity that performed the analyses.
- (DD) The analytical techniques or methods used.
- (EE) The results of such analyses.
- (FF) The operating conditions as existing at the time of sampling or measurement.

These records shall be physically present or electronically accessible at the source location for a minimum of three (3) years. The records may be stored elsewhere for the remaining two (2) years as long as they are available upon request. If the Commissioner makes a request for records to the Permittee, the Permittee shall furnish the records to the Commissioner within a reasonable time.

- (b) Unless otherwise specified in this permit, for all record keeping requirements not already legally required, the Permittee shall be allowed up to ninety (90) days from the date of

permit issuance or the date of initial start-up, whichever is later, to begin such record keeping.

C.18 General Reporting Requirements [326 IAC 2-7-5(3)(C)] [326 IAC 2-1.1-11] [40 CFR 64]
[326 IAC 3-8]

- (a) The Permittee shall submit the attached Quarterly Deviation and Compliance Monitoring Report or its equivalent. Proper notice submittal under Section B – Emergency Provisions satisfies the reporting requirements of paragraph (a) of Section C – General Reporting. Any deviation from permit requirements, the date(s) of each deviation, the cause of the deviation, and the response steps taken must be reported except that a deviation required to be reported pursuant to an applicable requirement that exists independent of this permit, shall be reported according to the schedule stated in the applicable requirement and does not need to be included in this report. This report shall be submitted not later than thirty (30) days after the end of the reporting period. The Quarterly Deviation and Compliance Monitoring Report shall include a certification that meets the requirements of 326 IAC 2-7-6(1) by a "responsible official" as defined by 326 IAC 2-7-1(35). A deviation is an exceedance of a permit limitation or a failure to comply with a requirement of the permit.

On and after the date by which the Permittee must use monitoring that meets the requirements of 40 CFR Part 64 and 326 IAC 3-8, the Permittee shall submit CAM reports to the IDEM, OAQ.

A report for monitoring under 40 CFR Part 64 and 326 IAC 3-8 shall include, at a minimum, the information required under paragraph (a) of this condition and the following information, as applicable:

- (1) Summary information on the number, duration and cause (including unknown cause, if applicable) of excursions or exceedances, as applicable, and the corrective actions taken;
- (2) Summary information on the number, duration and cause (including unknown cause, if applicable) for monitor downtime incidents (other than downtime associated with zero and span or other daily calibration checks, if applicable); and
- (3) A description of the actions taken to implement a QIP during the reporting period as specified in Section C-Response to Excursions or Exceedances. Upon completion of a QIP, the owner or operator shall include in the next summary report documentation that the implementation of the plan has been completed and reduced the likelihood of similar levels of excursions or exceedances occurring.

The Permittee may combine the Quarterly Deviation and Compliance Monitoring Report and a report pursuant to 40 CFR 64 and 326 IAC 3-8.

- (b) The address for report submittal is:

Indiana Department of Environmental Management
Compliance and Enforcement Branch, Office of Air Quality
100 North Senate Avenue
MC 61-53 IGCN 1003
Indianapolis, Indiana 46204-2251

- (c) Unless otherwise specified in this permit, any notice, report, or other submission required by this permit shall be considered timely if the date postmarked on the envelope or certified mail receipt, or affixed by the shipper on the private shipping receipt, is on or before the date it is due. If the document is submitted by any other means, it shall be considered timely if received by IDEM, OAQ on or before the date it is due.

- (d) The first report shall cover the period commencing on the date of issuance of this permit or the date of initial start-up, whichever is later, and ending on the last day of the reporting period. Reporting periods are based on calendar years, unless otherwise specified in this permit. For the purpose of this permit, "calendar year" means the twelve (12) month period from January 1 to December 31 inclusive.

Stratospheric Ozone Protection

C.19 Compliance with 40 CFR 82 and 326 IAC 22-1

Pursuant to 40 CFR 82 (Protection of Stratospheric Ozone), Subpart F, except as provided for motor vehicle air conditioners in Subpart B, the Permittee shall comply with applicable standards for recycling and emissions reduction.

SECTION D.1 EMISSIONS UNIT OPERATION CONDITIONS - Boilers

Emissions Unit Description:

- (a) Three (3) 33.7 MMBtu per hour natural gas fired boilers, identified as P17, P18, and P18A, approved in 1996 for construction, and exhausting to Stacks 17, 18, and 18A, respectively.
- (b) Two (2) wood/shredded tire fired boilers, identified as P17B and P17C, approved in 2006 for construction, each with a nominal heat input capacity of 57.3 MMBtu/hr, both controlled by one (1) electrostatic precipitator (ESP) (identified as ES1), and exhausting through Stack 17A. Stack 17A is equipped with a continuous opacity monitoring system (COMS).

(The information describing the process contained in this facility description box is descriptive information and does not constitute enforceable conditions.)

Emission Limitations and Standards [326 IAC 2-7-5(1)]

D.1.1 Particulate Matter Limitation (PM) [326 IAC 6-2-4]

Pursuant to 326 IAC 6-2-4 (Particulate Emission Limitations for Sources of Indirect Heating), particulate emissions from the natural gas fired-boilers (P17, P18, and P18A) shall be limited to 0.328 pounds per million BTU heat input each.

D.1.2 PSD Minor Limits [326 IAC 2-2]

In order to render the requirements of 326 IAC 2-2 (PSD) not applicable, the Permittee shall comply with the following:

- (a) The total emissions from boilers P17B and P17C (Stack 17A) shall not exceed the emission limits listed in the table below:

Pollutants	Emission Limit (lb/MMBtu)
CO	0.2
NO _x	0.44
PM	0.025
PM ₁₀	0.042
PM _{2.5}	0.035
SO ₂	0.115
VOC	0.017

- (b) The total equivalent dry wood input to boilers P17B, P17C, P17, P18, and P18A shall not exceed 51,875 tons per twelve consecutive month period with compliance determined at the end of each month.
 - (1) Dry wood is defined as wood with a moisture content less than 5% by weight.
 - (2) The use of one ton of shredded tire is equivalent to the use of 2.0 tons of equivalent dry wood.
 - (3) The use of 1 MMCF of natural gas in boilers P17, P18, or P18A is equivalent to the use of 37.8 tons of equivalent dry wood.

Therefore, the total equivalent dry wood usage shall be calculated using the following equation:

Total Equivalent Dry Wood Usage (tons) = Dry Wood Usage (tons) + [Wet Wood Usage (tons) / (1+Moisture Content of Wet Wood)] + 2.0 x Shredded Tire (tons) + 37.8 x NG Usage (MMCF)

- (c) The total shredded tire input to boilers P17B and P17C shall not exceed 7,410 tons per twelve consecutive month period with compliance determined at the end of each month.
- (d) The heating value of the dry wood combusted in boilers P17B or P17C shall not exceed 16 MMBtu/ton.
- (e) The heating value of the shredded tire combusted in boilers P17B or P17C shall not exceed 32 MMBtu/ton.
- (f) The wood combusted in boilers P17B and P17C shall be limited to fresh cut wood, painted/unpainted/untreated kiln dried wood scraps, or pallets.
- (g) The tires combusted in boilers P17B and P17C shall be limited to shredded tires.

Compliance with these limits, in combination with the limits in Conditions D.2.1, D.3.1, and D.4.1 and the potential to emit from other units at the source, shall limit the potential to emit NO_x, VOC, PM, PM₁₀, and PM_{2.5} from the entire source to less than 250 tons per twelve (12) consecutive month period, each. Therefore, the requirements of 326 IAC 2-2 (PSD) are not applicable.

Compliance with these limits, combined with the potential to emit greenhouse gases from all other emission units at this source, shall limit the source-wide total potential to emit greenhouse gases (GHGs) to less than 100,000 tons of CO₂ equivalent emissions (CO₂e) per 12 consecutive month period and shall render 326 IAC 2-2 (Prevention of Significant Deterioration (PSD)) not applicable.

D.1.3 Preventive Maintenance Plan [326 IAC 2-7-5(12)]

A Preventive Maintenance Plan is required for these facilities and their control devices. Section B - Preventive Maintenance Plan contains the Permittee's obligation with regard to the preventive maintenance plan required by this condition.

Compliance Determination Requirements [326 IAC 2-7-5(1)]

D.1.4 Particulate Control

In order to assure compliance with Condition D.1.2, the ESP for particulate control shall be in operation and control emissions from boilers P17B and P17C at all times that these boilers are in operation.

D.1.5 Testing Requirements [326 IAC 2-7-6(1),(6)] [326 IAC 2-1.1-11]

- (a) In order to demonstrate compliance with Condition D.1.2, the Permittee shall perform PM, PM₁₀, PM_{2.5}, SO₂, NO_x, VOC, and CO testing for the emissions from Stack 17A (boilers 17B and 17C), utilizing methods as approved by the Commissioner, at least once every five (5) years from the date of the most recent valid compliance demonstration. The performance testing for each pollutant shall be performed at the worst case combustion scenario for each pollutant. PM₁₀ and PM_{2.5} include filterable and condensable PM.
- (b) If boilers P17B and P17C have been shutdown for 90 days or more before the five (5) year date of the most recent valid compliance demonstration, the Permittee shall perform PM, PM₁₀, PM_{2.5}, SO₂, NO_x, VOC, and CO testing for the emissions not later than one hundred eighty (180) days after start-up, utilizing methods as approved by the Commissioner. The performance testing for each pollutant shall be performed at the worst case combustion scenario for each pollutant. PM₁₀ and PM_{2.5} includes filterable and condensable PM.

- (c) Testing shall be conducted in accordance with the provisions of 326 IAC 3-6 (Source Sampling Procedures). Section C- Performance Testing contains the Permittee's obligation with regard to the performance testing required by this condition.
- (d) In order to demonstrate compliance with Condition D.1.2(b)(1), the Permittee shall perform analytical testing once every two (2) weeks to determine the moisture content of the wood received.

D.1.6 Continuous Emissions Monitoring [326 IAC 3-5]

- (a) Pursuant to 326 IAC 3-5, and in order to ensure compliance with Condition D.1.2 and the requirements of 40 CFR 60, Subpart Dc as specified in Section E.1, continuous emission monitoring systems (CEMS) for boilers P17B and P17C shall be installed, calibrated, maintained, operated, and certified for measuring opacity which meet all applicable performance specifications of 326 IAC 3-5-2.
- (b) All continuous emission monitoring systems are subject to monitor system certification requirements pursuant to 326 IAC 3-5-3.
- (c) In the event that a breakdown of a continuous emission monitoring system occurs, a record shall be made of the times and reasons of the breakdown and efforts made to correct the problem.
- (d) Nothing in this permit shall excuse the Permittee from complying with the requirements to operate a continuous emission monitoring system pursuant to 326 IAC 3-5 and 40 CFR Part 60.

D.1.7 Continuous Opacity Monitoring [326 IAC 3-5]

Whenever a COMS is malfunctioning or is down for maintenance or repairs for a period of twenty-four (24) hours or more and a backup COMS is not online within twenty-four (24) hours of shutdown or malfunction of the primary COMS, the Permittee shall provide a certified opacity reader, who may be an employee of the Permittee or an independent contractor, to self-monitor the emissions from the emission unit stack.

- (a) Visible emission readings shall be performed in accordance with 40 CFR 60, Appendix A, Method 9, for a minimum of five (5) consecutive six (6)-minute averaging periods beginning not more than twenty-four (24) hours after the start of the malfunction or down time.
- (b) Method 9 opacity readings shall be repeated for a minimum of five (5) consecutive six (6)-minute averaging periods at least twice per day during daylight operations, with at least four (4) hours between each set of readings, until a COMS is online.
- (c) Method 9 readings may be discontinued once a COMS is online.
- (d) Any opacity exceedances determined by Method 9 readings shall be reported with the Quarterly Opacity Exceedances Reports.

Compliance Monitoring Requirements [326 IAC 2-7-6(1)] [326 IAC 2-7-5(1)]

D.1.8 Transformer-Rectifier (T-R) Sets [326 IAC 2-7-6(1)] [326 IAC 2-7-5(1)]

- (a) The ability of the ESP to control particulate emissions shall be monitored once per day, when the unit is in operation, by measuring and recording the number of T-R sets in service and the primary and secondary voltages and the currents of the T-R sets.

- (b) Reasonable response steps shall be taken whenever the percentage of T-R sets in service falls below ninety percent (90%). Section C - Response to Excursions or Exceedances contains the Permittee's obligation with regard to the reasonable response steps required by this condition. T-R set failure resulting in less than ninety percent (90%) availability is not a deviation from this permit. Failure to take response steps shall be considered a deviation from this permit.

D.1.9 Wood Inspections

In order to demonstrate compliance with Condition D.1.2(f), the Permittee shall perform visual inspection of the wood received at this source for combustion. Inspections required by this condition shall be performed when performing the moisture content testing for the wood received.

Record Keeping and Reporting Requirements [326 IAC 2-7-5(3)] [326 IAC 2-7-19]

D.1.10 Record Keeping Requirements

- (a) To document the compliance status with Section C - Opacity, and the particulate matter and opacity requirements in Conditions D.1.2, D.1.6, D.1.7, and D.1.8, the Permittee shall maintain records in accordance with (1) through (4) below. Records shall be complete and sufficient to establish compliance with the limits in Condition D.1.2.
 - (1) Data and results from the most recent stack test.
 - (2) All continuous opacity monitoring data, pursuant to 326 IAC 3-5-6.
 - (3) The results of all Method 9 visible emission readings taken during any periods of COMS downtime.
 - (4) All ESP parametric monitoring readings.
- (b) To document the compliance status with Condition D.1.2, the Permittee shall maintain monthly records of the following:
 - (1) The amount of the wood combusted each month in boilers P17B and P17C.
 - (2) The type (fresh cut wood, painted/unpainted/untreated kiln dried wood scraps, or pallets) and the moisture contents of the wood combusted in boilers P17B and P17C.
 - (3) The amount of shredded tire combusted in boilers P17B and P17C.
 - (4) The total natural gas usage in boilers P17, P18, and P18A.
 - (5) The amount of equivalent dry wood usage for each month using the equation in Condition D.1.2(b).
- (c) To document the compliance status with Condition D.1.2(f), the Permittee shall maintain a copy of the contract which indicates that the wood supplier cannot deliver any type of wood which is not specified in Condition D.1.2(f).
- (d) To document the compliance status with Condition D.1.9, the Permittee shall maintain records of the results of the inspections required under Condition D.1.9.
- (e) Section C - General Record Keeping Requirements contains the Permittee's obligation with regard to the records required to be maintained by this condition.

D.1.11 Reporting Requirements

A quarterly summary of the information to document the compliance status with Conditions D.1.2(b) and D.1.2(c) shall be submitted no later than thirty (30) days after the end of the quarter being reported. Section C - General Reporting contains the Permittee's obligation with regard to the reporting required by this condition. The report submitted by the Permittee does require a certification that meets the requirements of 326 IAC 2-7-6(1) by a "responsible official" as defined by 326 IAC 2-7-1(35).

SECTION D.2 EMISSIONS UNIT OPERATION CONDITIONS - Grain Receiving and Handling

Emissions Unit Description:

- (c) One (1) north truck receiving area, identified as P24, approved in 2001 for construction, with a nominal throughput capacity of 360 tons per hour, controlled by baghouse C24, and exhausting to Stack 24. Under NSPS, Subpart DD, this unit is considered a truck unloading station.
- (d) One (1) north house bin loading area, identified as P27, approved in 2001 for construction, with a nominal throughput capacity of 360 tons per hour, and exhausting inside the north house, consisting of the following:
 - (1) One (1) totally enclosed aspirated elevator leg that transfers soybeans to enclosed conveyors.
 - (2) Two (2) enclosed conveyors that transfer the soybean from the north receiving area to the soybean storage areas.
- (f) One (1) truck only soybean receiving area, identified as P1, approved in 1996 for construction, with a nominal throughput capacity of 600 tons per hour. This area consists of the following:
 - (1) One (1) truck only receiving pit.
 - (2) One (1) totally enclosed belt conveyor system (or equivalent), using an oil application to control PM emissions.
 - (3) One (1) aspirated soybean receiving leg, controlled by an oil application to control PM emissions and also controlled by baghouse C1, exhausting to Stack 1.
 - (4) One (1) enclosed belt conveyor that transfers the soybean from the receiving leg to the soybean enclosed belt conveyor.
 - (5) One (1) enclosed belt conveyor that loads the soybean storage silos.
- (g) One (1) truck and railcar soybean receiving area, identified as P2, approved in 1996 for construction, with a nominal throughput capacity of 540 tons per hour, consisting of the following:
 - (1) One (1) truck and railcar receiving pit, with PM emissions controlled by restricting vehicles unloading grain at these stations to hopper-bottom rail cars and trucks with choke unloading applications.
 - (2) One (1) enclosed drag conveyor system (or equivalent), using an oil application to control PM emissions.
 - (3) Two (2) aspirated soybean receiving legs, using an oil application to control PM emissions and also controlled by baghouse C1, exhausting to Stack 1.
 - (4) One (1) aspirated bulkweigher, using and oil application to control PM emissions and also controlled by baghouse C1, exhausting to Stack 1.
 - (5) One (1) enclosed drag conveyor that transfers the soybean at a nominal rate of 540 tons per hour from the receiving leg to the soybean covered belt conveyor that loads the soybean silos.
- (h) One (1) annex silo loading operation, identified as P2A, approved in 1996 for construction, with a nominal throughput rate of 1,740 tons per hour, controlled by an oil application system, and

Emissions Unit Description:

consisting of the following:

- (1) Twelve (12) concrete soybean silos, each with a nominal storage capacity of 73,053 bushels.
 - (2) Four (4) concrete soybean storage silos, each with a nominal capacity of 19,375 bushels.
 - (3) Two (2) concrete soybean storage silos, each with a nominal capacity of 18,801 bushels.
 - (4) Three (3) totally enclosed drag conveyors (or equivalent) comprising two conveyance systems located below the storage silos that transfer the soybeans from the silos to the elevator legs.
- (i) One (1) soybean storage system, identified as P2B, approved in 2002 for construction and approved in 2009 for modification, with a nominal throughput of 600 tons per hour, controlled by an oil application system, and consisting of the following:
- (1) Two (2) soybean silos (P2B and P2C), with a nominal combined storage capacity of 1,177,000 bushels.
 - (2) Two (2) enclosed belt conveyors.
 - (3) Two (2) enclosed drag conveyors.
- (k) One (1) soybean cleaning system, identified as P4, approved in 1996 for construction, with a nominal throughput rate of 125 tons per hour, controlled by baghouse C4, and exhausting to stack C4. This system consists of the following:
- (1) Two (2) soybean elevator legs that transfer the soybeans from the drag conveyor to the cleaner, using an oil application to control PM emissions.
 - (2) One (1) totally enclosed conveyor that transfers the soybeans from the elevator legs to the cleaner.
 - (3) One (1) cleaning system, consisting of the following:
 - (A) Two (2) cleaners, controlled by an oil application system and baghouse C4.
 - (B) Two (2) whole bean aspirators, controlled by an oil application system and baghouse C4.
 - (C) One (1) conveyor transferring beans from the aspirator to the hopper, controlled by an oil application system and baghouse C4.
 - (D) One (1) hopper, controlled by an oil application system and baghouse C4.
 - (E) One (1) scale, controlled by an oil application system and baghouse C4.
 - (F) Two (2) pods aspirators, approved in 2014 for construction, identified as P4A, with a maximum capacity of 125 tons per hour, controlled by baghouse C4A and exhausting through stack 4A.
 - (G) One (1) pods aspirator, controlled by cyclone C5E, and exhausting to stack 5.

Emissions Unit Description:

(H) One (1) pods breaker, controlled by cyclone C5E, and exhausting to stack 5.

(The information describing the process contained in this facility description box is descriptive information and does not constitute enforceable conditions.)

Emission Limitations and Standards [326 IAC 2-7-5(1)]

D.2.1 PSD Minor Limits [326 IAC 2-2]

In order to render the requirements of 326 IAC 2-2 (PSD) not applicable, the Permittee shall comply with the following:

(a) The PM, PM₁₀, and PM_{2.5} emissions from the following emission units shall be limited as follows:

Unit ID	Unit Description	Control Device	PM Emission Limit (lbs/hr)	PM ₁₀ Emission Limit (lbs/hr)	PM _{2.5} Emission Limit (lbs/hr)
P24	North Truck Receiving	Baghouse C24	0.43	0.43	0.43
P4	Soybean Cleaning	Baghouse C4	0.81	0.81	0.81
P1	Truck Soybean Receiving	Baghouse C1	0.56	0.56	0.56
P4A	Pods Aspirators	Baghouse C4A	0.69	0.69	0.69

(b) The total grain received at P1 and P2 combined shall not exceed 1,174,760 tons per twelve (12) consecutive month period with compliance determined at the end of each month.

(c) The total grain received at the north house bin loading area, identified as P27, shall not exceed 108,000 tons per twelve (12) consecutive month period with compliance determined at the end of each month.

(d) The PM, PM₁₀, and PM_{2.5} emissions from the following emission units shall be limited as follows:

Unit ID	Unit Description	Control Device	PM Emission Limit (lbs/ton)	PM ₁₀ Emission Limit (lbs/ton)	PM _{2.5} Emission Limit (lbs/ton)
P27	North House Bin Loading	None	0.061	0.034	0.0058
P2	Truck and Railcar Receiving	restricting vehicles unloading grain to hopper-bottom rail cars	0.035	0.0078	0.00013
P2A	Annex Silo Storage	oil application system	0.010	0.0025	0.0004
P2A	Annex Silo Loading	oil application system	0.024	0.0136	0.0023
P2B	Soybean Storage	oil application system	0.010	0.0025	0.0004
P2B	Soybean Loading	oil application system	0.024	0.0136	0.0023

Compliance with these limits, in combination with the limits in Conditions D.1.2, D.3.1, and D.4.1 and the potential to emit from other units at the source, shall limit the potential to emit PM, PM₁₀, and PM_{2.5} from the entire source to less than 250 tons per twelve (12) consecutive month period, each. Therefore, the requirements of 326 IAC 2-2 (PSD) are not applicable.

D.2.2 Preventive Maintenance Plan [326 IAC 2-7-5(12)]

A Preventive Maintenance Plan is required for these facilities and their control devices. Section B - Preventive Maintenance Plan contains the Permittee's obligation with regard to the preventive maintenance plan required by this condition.

Compliance Determination Requirements [326 IAC 2-7-5(1)]

D.2.3 Particulate Control

- (a) In order to assure compliance with Condition D.2.1, each of the following emission units shall be controlled by the associated baghouse, as listed in the table below, when these units are in operation:

Unit ID	Unit Description	Baghouse ID
P24	North Truck Receiving	C24
P4	Soybean Cleaning	C4
P1	Truck Soybean Receiving	C1
P4A	Pods Aspirators	C4A

- (b) In order to assure compliance with Conditions D.2.1(a) and D.2.1(d), dust control oil shall be applied on all soybeans handled by emission units identified as P1, P2, P2A, P2B, and P4.
- (c) In order to assure compliance with Conditions D.2.1(a) and D.2.1(d), vehicles unloading grain (Units P1 and P2) shall be restricted to grain to hopper-bottom rail cars or trucks with choke unloading applications.
- (d) In the event that bag failure is observed in a multi-compartment baghouse, if operations will continue for ten (10) days or more after the failure is observed before the failed units will be repaired or replaced, the Permittee shall promptly notify the IDEM, OAQ of the expected date the failed units will be repaired or replaced. The notification shall also include the status of the applicable compliance monitoring parameters with respect to normal, and the results of any response actions taken up to the time of notification.

D.2.4 Testing Requirements [326 IAC 2-7-6(1), (6)] [326 IAC 2-1.1-11]

In order to demonstrate the compliance status with Conditions D.2.1(a), the Permittee shall perform PM, PM₁₀, and PM_{2.5} testing for baghouse C4A, controlling pods aspirators P4A, within sixty (60) days of reaching maximum capacity but no later than one hundred eighty (180) days after the initial startup of pods aspirators P4A, utilizing methods as approved by the Commissioner at least once every five (5) years from the date of the most recent valid compliance demonstration. Testing shall be conducted in accordance with the provisions of 326 IAC 3-6 (Source Sampling Procedures). Section C – Performance Testing contains the Permittee's obligation with regard to the performance testing required by this condition. PM₁₀ and PM_{2.5} include filterable and condensable particulate matter.

Compliance Monitoring Requirements [326 IAC 2-7-6(1)] [326 IAC 2-7-5(1)]

D.2.5 Visible Emissions Notations [40 CFR 64]

- (a) Pursuant to 40 CFR 64 (CAM), visible emission notations of the exhausts from the baghouse stacks (Stacks 24 and 4) shall be performed daily during normal daylight operations. A trained employee shall record whether emissions are normal or abnormal.
- (b) Visible emission notations of the exhausts from the baghouse C4A stack (Stack 4A) shall be performed daily during normal daylight operations. A trained employee shall record whether emissions are normal or abnormal.

- (b) For processes operated continuously, "normal" means those conditions prevailing, or expected to prevail, eighty percent (80%) of the time the process is in operation, not counting startup or shut down time.
- (c) In the case of batch or noncontinuous operations, readings shall be taken during that part of the operation that would normally be expected to cause the greatest emissions.
- (d) A trained employee is an employee who has worked at the plant at least one (1) month and has been trained in the appearance and characteristics of normal visible emissions for that specific process.
- (e) If abnormal emissions are observed, the Permittee shall take a reasonable response. Section C - Response to Excursions or Exceedances contains the Permittee's obligation with regard to the reasonable response steps required by this condition. Failure to take response steps shall be considered a deviation from this permit.

D.2.6 Parametric Monitoring [40 CFR 64]

Pursuant to 40 CFR 64 (CAM), the Permittee shall record the pressure drop across the baghouses used in conjunction with the north truck receiving (P24), the truck receiving (P1), and the soybean cleaning (P4) operations, at least once per day when the any of these operations is in operation. When, for any one reading, the pressure drop across the baghouse is outside of the normal range, the Permittee shall take a reasonable response. The normal range for this unit is a pressure drop between 1.0 and 7.0 inches of water unless a different upper-bound or lower-bound value for this range is determined during the latest stack test. Section C - Response to Excursions or Exceedances contains the Permittee's obligation with regard to the reasonable response steps required by this condition. A pressure reading that is outside the above mentioned range is not a deviation from this permit. Failure to take response steps shall be considered a deviation from this permit.

The instrument used for determining the pressure shall comply with Section C - Instrument Specifications, of this permit, shall be subject to approval by IDEM, OAQ, and shall be calibrated or replaced at least once every six (6) months.

D.2.7 Broken or Failed Bag Detection

- (a) For a single compartment baghouse controlling emissions from a process operated continuously, a failed unit and the associated process shall be shut down immediately until the failed unit has been repaired or replaced. Operations may continue only if the event qualifies as an emergency and the Permittee satisfies the requirements of the emergency provisions of this permit (Section B - Emergency Provisions).
- (b) For a single compartment baghouse controlling emissions from a batch process, the feed to the process shall be shut down immediately until the failed unit has been repaired or replaced. The emissions unit shall be shut down no later than the completion of the processing of the material in the line. Operations may continue only if the event qualifies as an emergency and the Permittee satisfies the requirements of the emergency provisions of this permit (Section B - Emergency Provisions).

Bag failure can be indicated by a significant drop in the baghouse's pressure reading with abnormal visible emissions, by an opacity violation, or by other means such as gas temperature, flow rate, air infiltration, leaks, dust traces or triboflows.

Record Keeping and Reporting Requirements [326 IAC 2-7-5(3)] [326 IAC 2-7-19]

D.2.8 Record Keeping Requirements

- (a) To document the compliance status with Condition D.2.1(b), the Permittee shall maintain monthly records of the total amount of the grain received.

- (b) To document the compliance status with Condition D.2.1(c), the Permittee shall maintain monthly records of the total amount of the grain received at the north house bin loading area, identified as P27.
- (c) To document the compliance status with Condition D.2.4, the Permittee shall maintain records of the daily visible emission notations. The Permittee shall include in its daily record when a visible emission notation is not taken and the reason for the lack of visible emission notation (e.g. the process did not operate that day).
- (d) To document the compliance status with Condition D.2.5, the Permittee shall maintain once per day records of the pressure drop during normal operation for baghouses. The Permittee shall include in its daily record when a pressure drop reading is not taken and the reason for the lack of a pressure drop reading (e.g. the process did not operate that day).
- (e) Section C - General Record Keeping Requirements contains the Permittee's obligation with regard to the records required to be maintained by this condition.

D.2.9 Reporting Requirements

- (a) A quarterly summary of the information to document the compliance status with Condition D.2.1(b) shall be submitted not later than thirty (30) days after the end of each calendar quarter.
- (b) A quarterly summary of the information to document the compliance status with Condition D.2.1(c) shall be submitted not later than thirty (30) days after the end of each calendar quarter.
- (c) The reports submitted by the Permittee do require a certification that meets the requirements of 326 IAC 2-7-6(1) by a "responsible official" as defined by 326 IAC 2-7-1(35). Section C - General Reporting Requirements contains the Permittee's obligation with regard to the reports required by this condition.

SECTION D.3 EMISSIONS UNIT OPERATION CONDITIONS - Oil Extraction Processes

Emissions Unit Description:

- (e) One (1) soybean expander system, approved in 1996 for construction and approved in 2004 for modification, with a nominal capacity of 50 tons per hour. This system consists of the following:
 - (1) One (1) expander, forming soybean collets.
 - (2) One (1) totally enclosed conveying system transferring material from the expander system to the extraction system.
- (l) One (1) soybean heater with one (1) L-Path totally enclosed drag conveyor, identified as P21, approved in 1996 for construction and approved in 2008 for replacement, with a nominal capacity of 125 tons per hour, and exhausting to Stack 21. Under NESHAP, Subpart GGGG, the soybean heater is considered vegetable oil production processes.
- (m) One (1) soybean cracking and dehulling operation, identified as P5, approved in 1996 for construction, with a nominal throughput rate of 125 tons per hour, and consisting of the following:
 - (1) One (1) enclosed drag conveyor (or equivalent) and one (1) totally enclosed overflow recycle L-Path conveyor (or equivalent) with a totally enclosed surge hopper that transfers soybeans to the jet dryers.
 - (2) Three (3) jet dryers, each with a nominal capacity of 42 tons per hour, controlled by cyclones C5A, C5B, and C5F, respectively, and exhausting to Stack 5.
 - (3) Three (3) primary CCD dryers, controlled by cyclones C5C and C5G, and exhausting to Stack 5.
 - (4) Three (3) secondary CCC coolers, controlled by cyclones C5D and C5H, and exhausting to Stack 5.
 - (5) Six (6) cracking and dehulling rolls that transfer the hulls through four (4) cyclones (C5C, C5D, C5G, and C5H) to an enclosed conveyor.
 - (6) One (1) totally enclosed cracking and dehulling drag conveyor (or equivalent) that transfers hulls from cyclones C5A and C5B to the hull grinding system, with a nominal throughput rate of 8.75 tons per hour.
 - (7) One (1) totally enclosed cracking and dehulling drag conveyor (or equivalent) that transfers hulls and aspirated fines from cyclones C5C, C5D, C5F, C5G, C5H, and the totally enclosed auger (or equivalent) of filter C4 to the hull screener and aspirator, with a nominal throughput rate of 8.75 tons per hour.
 - (8) Two (2) hull screeners and aspirators, with a total nominal throughput rate of 8.75 tons per hour, controlled by cyclone C5E, and exhausting to Stack 5.
- (s) One (1) soybean flaking operation, identified as P19, approved in 1996 for construction and approved in 2009 and in 2010 for modification, with a nominal throughput rate of 114.0 tons per hour, and consisting of the following:
 - (1) One (1) totally enclosed drag conveyor (or equivalent) and one (1) totally enclosed overflow recycle L-Path conveyor (or equivalent) with a totally enclosed surge hopper that transfers beans from cracking and dehulling to the flakers.

Emissions Unit Description:

- (2) Ten (10) flakers, controlled by baghouses C19A, C19B, and C19C, exhausting to Stack 19, and/or controlled by baghouse C19D, exhausting to Stack P19D.
- (3) Two (2) totally enclosed drag conveyors (or equivalent) in series that transfer soybean flakes and collets from the flakers and the expander system to the feed screw conveyor.
- (4) One (1) feed screw conveyor that transfers soybean flakes and collets to the extractor.
- (t) One (1) soybean oil extraction system, identified as P13, approved in 1996 for construction, controlled by mineral oil absorber system C13, and exhausting to Stack 13. This system consists of the following:
 - (1) One (1) soybean oil extractor, with a nominal capacity of 114.0 tons of soybean flakes and collets per hour and 114.0 tons of hexane per hour.
 - (2) One (1) desolventizer unit, with a nominal capacity of 94.4 tons of spent soybean flakes and collets per hour.
 - (3) A set of evaporators, with a nominal capacity of 24.0 tons of soybean oil per hour.
 - (4) A set of condensers and water separator to separate hexane and water, with a nominal capacity of 24.0 tons of soybean oil per hour.
 - (5) One (1) totally enclosed drag conveyor (or equivalent) that transfers flakes and hexane to the desolventizer at a nominal rate of 94.4 tons per hour and 37.5 tons per hour, respectively.
- (u) One (1) DTDC meal dryer section 1, identified as P10, approved in 1996 for construction, with a nominal drying capacity of 90.7 tons of meal per hour, controlled by cyclone C10, and exhausting to Stack 10.
- (v) One (1) DTDC meal dryer section 2, identified as P11, approved in 1996 for construction, with a nominal drying capacity of 90.7 tons of meal per hour, controlled by cyclone C11, and exhausting to Stack 11.
- (w) One (1) DTDC meal dryer section 3, identified as P12, approved in 2009 for modification, with a nominal capacity of 90.7 tons of meal per hour, controlled by cyclone C12, and exhausting to Stack 12.
- (x) One (1) enclosed conveyor transferring meal from the meal dryer section 3 to the meal cooling operation, approved in 2009 for construction.
- (y) One (1) meal cooling operation, identified as P12A, approved in 2009 for construction, with a nominal capacity of 90.7 tons of meal per hour, controlled by cyclone C12A, and exhausting to Stack 12A. This operation consists of the following:
 - (1) Two (2) meal cooler sections, exhausting to the common cyclone C12A and Stack 12A.
 - (2) One (1) Meal Cooler enclosed drag conveyor (or equivalent) that transfers meal from the Meal Cooler and the C12A Cyclone to the one (1) DTDC enclosed drag conveyor.
 - (3) One (1) DTDC enclosed drag conveyor (or equivalent) that transfers meal from the Meal Cooler/DTDC and four (4) DTDC cyclones (C10, C11, C12, C12A) to the meal surge bin conveyor.

Emissions Unit Description:

(dd) Three (3) fixed roof hexane storage tanks.

(1) Two (2) fixed roof hexane storage tanks, approved in 2013 for construction, each with a nominal storage capacity of 12,000 gallons.

(2) One (1) horizontal fixed roof hexane storage tank, approved in 2012 for construction, with a nominal storage capacity of 28,000 gallons.

All hexane tanks are vented to the distillation system and exhausted through to Stack 13 (P13). Under NESHAP, Subpart GGGG, these tanks are considered vegetable oil production processes.

(ee) One (1) fixed roof hexane work tank, approved in 1996 for construction, with a nominal storage capacity of 8,000 gallons. Under NESHAP, Subpart GGGG, this tank is considered a vegetable oil production process.

(The information describing the process contained in this facility description box is descriptive information and does not constitute enforceable conditions.)

Emission Limitations and Standards [326 IAC 2-7-5(1)]

D.3.1 PSD Minor Limits [326 IAC 2-2]

In order to render the requirements of 326 IAC 2-2 (PSD) not applicable, the Permittee shall comply with the following:

(a) The PM, PM₁₀, and PM_{2.5} emissions from the following emission unit shall be limited as follows:

Unit ID	Unit Description	Control Device	PM Emission Limit (lbs/hr)	PM ₁₀ Emission Limit (lbs/hr)	PM _{2.5} Emission Limit (lbs/hr)
P5	Soybean Cracking/Dehulling	Cyclones C5A-H	21.94	21.94	21.94
P19	Soybean Flaking	Baghouses C19A-C	0.39	0.39	0.39
		Baghouse C19D	0.72	0.72	0.72
P10	DTDC Meal Dryer #1	Cyclone C10	5.39	5.39	5.39
P11	DTDC Meal Dryer #2	Cyclone C11	0.13	0.13	0.13
P12	DTDC Meal Dryer #3	Cyclone C12	0.10	0.10	0.10
P12A	DTDC Meal Cooler	Cyclone C12A	0.22	0.22	0.22

(b) The total grain processed at this source shall not exceed 1,095,000 tons per twelve (12) consecutive month period with compliance determined at the end of each month.

(c) The PM emissions from the soybean heater (P21) shall not exceed 0.001 pounds per ton of grain processed.

(d) The PM₁₀ emissions from the soybean heater (P21) shall not exceed 0.001 pounds per ton of grain processed.

(e) The PM_{2.5} emissions from the soybean heater (P21) shall not exceed 0.001 pounds per ton of grain processed.

Compliance with these limits, in combination with the limits in Conditions D.1.2, D.2.1, and D.4.1 and the potential to emit from other units at the source, shall limit the potential to emit PM, PM₁₀, and PM_{2.5} from the entire source to less than 250 tons per twelve (12) consecutive month period, each. Therefore, the requirements of 326 IAC 2-2 (PSD) are not applicable.

D.3.2 Particulate Emission Limitations [326 IAC 6-3-2]

Pursuant to 326 IAC 6-3-2 (Particulate Emission Limitations for Manufacturing Processes), particulate emissions from each of following operations shall not exceed the pound per hour limits listed in the table below:

Unit ID	Unit Description	Max. Throughput Rate (tons/hr)	Particulate Emission Limit (lbs/hr)
P21	Soybean Heater	125.0	53.5
P5	Soybean Cracking/Dehulling	125.0	53.5
P19	Soybean Flaking	114.0	52.6
P10	DTDC Meal Dryer #1	90.7	50.3
P11	DTDC Meal Dryer #2	90.7	50.3
P12	DTDC Meal Dryer #3	90.7	50.3
P12A	DTDC Meal Cooler	90.7	50.3

The pounds per hour limitations were calculated using the following equation:

Interpolation and extrapolation of the data for the process weight rate in excess of sixty thousand (60,000) pounds per hour shall be accomplished by use of the equation:

$$E = 55.0 P^{0.11} - 40 \quad \text{where } E = \text{rate of emission in pounds per hour; and} \\ P = \text{process weight rate in tons per hour}$$

D.3.3 VOC Emissions [326 IAC 8-1-6]

Pursuant to 326 IAC 8-1-6 (BACT), CP#129-7488-00035 (original BACT), issued on July 17, 1995, and SSM No. 129-27572-00035 (Revised BACT), issued on August 11, 2009 and SSM No. 129-34318-00035, the Permittee shall control the VOC emissions from the soybean oil extraction system (P13), the DTDC dryers (P10, P11 and P12), and the DTDC cooler (P12A) with a Best Available Control Technology (BACT), which have been determined to be the following:

- (a) The overall source wide solvent loss ratio shall not exceed 0.19 gallons per ton of soybean processed from the whole plant per twelve (12) consecutive month period, with compliance determined at the end of each month.
- (b) The Permittee shall comply with the following for the soybean oil extraction system (P13):
 - (1) The extraction and distillation process shall be controlled by a mineral oil absorber system.
 - (2) The VOC emissions from the soybean oil extraction system (P13) shall not exceed 0.048 pounds per ton of soybean processed.
- (c) The VOC emissions from the DTDC dryers (P10, P11 and P12) shall not exceed 0.152 pounds per ton of soybean processed total.
- (d) The VOC emissions from the DTDC cooler (P12A) shall not exceed 0.152 pounds per ton of soybean processed.

- (e) The maximum annual throughput of soybeans processed shall not exceed 1,095,000 tons per twelve (12) consecutive month period, with compliance determined at the end of each month.

D.3.4 Preventive Maintenance Plan [326 IAC 2-7-5(12)]

A Preventive Maintenance Plan is required for these facilities and their control devices. Section B - Preventive Maintenance Plan contains the Permittee's obligation with regard to the preventive maintenance plan required by this condition.

Compliance Determination Requirements [326 IAC 2-7-5(1)]

D.3.5 Particulate Control

- (a) In order to assure compliance with Conditions D.3.1 and D.3.2, each of the following emission units shall be controlled by the associated baghouse or cyclone, as listed in the table below, when these units are in operation:

Unit ID	Unit Description	Control Device
P5	Soybean Cracking/Dehulling	Cyclones C5A-H
P19	Soybean Flaking	Baghouses C19A-C or Baghouse C19D
P10	DTDC Meal Dryer #1	Cyclone C10
P11	DTDC Meal Dryer #2	Cyclone C11
P12	DTDC Meal Dryer #3	Cyclone C12
P12A	DTDC Meal Cooler	Cyclone 12A

- (b) In the event that bag failure is observed in a multi-compartment baghouse, if operations will continue for ten (10) days or more after the failure is observed before the failed units will be repaired or replaced, the Permittee shall promptly notify the IDEM, OAQ of the expected date the failed units will be repaired or replaced. The notification shall also include the status of the applicable compliance monitoring parameters with respect to normal, and the results of any response actions taken up to the time of notification.

D.3.6 VOC Control

In order to assure compliance with Condition D.3.3(a), the soybean oil extraction system (P13) shall be controlled by the mineral oil absorber system (C13) when this system is in operation.

D.3.7 Testing Requirements [326 IAC 2-7-6(1),(6)] [326 IAC 2-1.1-11]

- (a) In order to demonstrate compliance with Conditions D.3.1 and D.3.2, the Permittee shall perform PM, PM₁₀, and PM_{2.5} testing for the soybean cracking and dehulling operation (P5) and Soybean Flaking (P19, stack P19D) utilizing methods as approved by the Commissioner at least once every five (5) years from the date of the most recent valid compliance demonstration. PM₁₀ and PM_{2.5} include filterable and condensable PM.
- (b) In order to demonstrate compliance with Condition D.3.3, the Permittee shall perform VOC testing for the soybean oil extraction system (P13) and the DTDC meal dryers (P10 and P11) utilizing methods as approved by the Commissioner at least once every five (5) years from the date of the most recent valid compliance demonstration.
- (c) In order to demonstrate compliance with Condition D.3.3(b) and (c), the Permittee shall perform VOC testing for the DTDC meal dryer section 3 (P12) and the DTDC meal cooler (P12A) when P12 and P12A are in operation utilizing methods as approved by the Commissioner. Testing on P12 and P12A shall be repeated in conjunction with testing on P10 and P11 at least once every five (5) years from the date of the most recent valid compliance demonstration for P10 and P11.

- (d) Testing shall be conducted in accordance with the provisions of 326 IAC 3-6 (Source Sampling Procedures). Section C- Performance Testing contains the Permittee's obligations with regard to the performance testing required by this condition.

Compliance Monitoring Requirements [326 IAC 2-7-6(1)] [326 IAC 2-7-5(1)]

D.3.8 Visible Emissions Notations [40 CFR 64]

- (a) Pursuant to 40 CFR 64 (CAM), visible emission notations of the exhausts from Stacks 5, 19, and P19D shall be performed daily during normal daylight operations. A trained employee shall record whether emissions are normal or abnormal.
- (b) Visible emission notations of the exhausts from Stacks 10, 11, 12 and 12A shall be performed daily during normal daylight operations. A trained employee shall record whether emissions are normal or abnormal.
- (c) For processes operated continuously, "normal" means those conditions prevailing, or expected to prevail, eighty percent (80%) of the time the process is in operation, not counting startup or shut down time.
- (d) In the case of batch or noncontinuous operations, readings shall be taken during that part of the operation that would normally be expected to cause the greatest emissions.
- (e) A trained employee is an employee who has worked at the plant at least one (1) month and has been trained in the appearance and characteristics of normal visible emissions for that specific process.
- (f) If abnormal emissions are observed, the Permittee shall take a reasonable response. Section C - Response to Excursions or Exceedances contains the Permittee's obligation with regard to the reasonable response steps required by this condition. Failure to take response steps shall be considered a deviation from this permit.

D.3.9 Parametric Monitoring [40 CFR 64]

Pursuant to 40 CFR 64 (CAM), the Permittee shall record the pressure drop across the baghouses used in conjunction with the soybean flaking operation (P19) at least once per day when any of these operations is in operation. When, for any one reading, the pressure drop across the baghouse is outside of the normal range, the Permittee shall take a reasonable response. The normal range for this unit is a pressure drop between 6.0 and 12.0 inches of water unless a different upper-bound or lower-bound value for this range is determined during the latest stack test. Section C - Response to Excursions or Exceedances contains the Permittee's obligation with regard to the reasonable response steps required by this condition. A pressure reading that is outside the above mentioned range is not a deviation from this permit. Failure to take response steps shall be considered a deviation from this permit.

The instrument used for determining the pressure shall comply with Section C - Instrument Specifications, of this permit, shall be subject to approval by IDEM, OAQ, and shall be calibrated or replaced at least once every six (6) months.

D.3.10 Broken or Failed Bag Detection

- (a) For a single compartment baghouse controlling emissions from a process operated continuously, a failed unit and the associated process shall be shut down immediately until the failed unit has been repaired or replaced. Operations may continue only if the event qualifies as an emergency and the Permittee satisfies the requirements of the emergency provisions of this permit (Section B - Emergency Provisions).
- (b) For a single compartment baghouse controlling emissions from a batch process, the feed to the process shall be shut down immediately until the failed unit has been repaired or replaced. The emissions unit shall be shut down no later than the completion of the processing of the material in the line. Operations may continue only if the event qualifies as an emergency and the Permittee satisfies the requirements of the emergency provisions of this permit (Section B - Emergency Provisions).

Bag failure can be indicated by a significant drop in the baghouse's pressure reading with abnormal visible emissions, by an opacity violation, or by other means such as gas temperature, flow rate, air infiltration, leaks, dust traces or triboflows.

D.3.11 Cyclone Failure Detection

In the event that cyclone failure has been observed:

Failed units and the associated process will be shut down immediately until the failed units have been repaired or replaced. The emissions unit shall be shut down no later than the completion of the processing of the material in the line. Operations may continue only if the event qualifies as an emergency and the Permittee satisfies the requirements of the emergency provisions of this permit (Section B - Emergency Provisions).

D.3.12 VOC Monitoring

The Permittee shall comply with the following for the mineral oil absorber system (C13), which is used to control the VOC emissions from the soybean extraction system (P13):

- (a) The inlet vacuum pressure of the vapor stream to the absorber shall not exceed 10 inches of water and the flow rate of the mineral oil through the absorber shall not be less than 15 gallons per minute. When the process is in operation, an electronic data management system (EDMS) shall record the instantaneous inlet vacuum pressure and flow rate on a frequency of not less than every 15 minutes.
- (b) The temperature of the mineral oil entering the absorber shall be kept in a range of 70 to 105 degrees Fahrenheit (°F). When the process is in operation, an electronic data management system (EDMS) shall record the instantaneous temperature on a frequency of not less than every 15 minutes.
- (c) The temperature of the mineral oil entering the mineral-oil-stripping column shall not be less than 200 degrees Fahrenheit (°F) for adequate stripping of the absorbed hexane from the oil. When the process is in operation, an EDMS shall record the instantaneous temperature on a frequency of not less than every 15 minutes.

In the event that a breakdown of the EDMS occurs, a record shall be made of the times and reasons of the breakdown and efforts made to correct the problem. To the extent practicable, supplemental or intermittent monitoring of the parameters should be implemented at intervals no less frequent than every 2 hours.

Record Keeping and Reporting Requirements [326 IAC 2-7-5(3)] [326 IAC 2-7-19]

D.3.13 Record Keeping Requirements

- (a) To document the compliance status with Conditions D.3.1(b), the Permittee shall maintain monthly records of the amount of soybean processed.
- (b) To document the compliance status with Condition D.3.3(a), the Permittee shall maintain monthly records of the source wide solvent loss ratio (SLR).
- (c) To document the compliance status with Condition D.3.8, the Permittee shall maintain records of the daily visible emission notations. The Permittee shall include in its daily record when a visible emission notation is not taken and the reason for the lack of visible emission notation (e.g. the process did not operate that day).
- (d) To document the compliance status with Condition D.3.9, the Permittee shall maintain once per day records of the pressure drop during normal operation for baghouses. The Permittee shall include in its daily record when a pressure drop reading is not taken and the reason for the lack of a pressure drop reading (e.g. the process did not operate that day).
- (e) To document the compliance status with Condition D.3.12, the Permittee shall maintain the following records:
 - (1) Records of the days the lower meal temperature of the desolventizer is below 215 degrees F and meal laboratory VOC test results for those days.
 - (2) Electronic data management system (EDMS) records for the inlet vacuum pressure of the vapor stream to the absorber, flow rate of the mineral oil through the absorber, the mineral oil temperature entering the absorber and mineral oil temperature entering the stripping column. Records of the times and reasons of the breakdown of the EDMS and efforts made to correct the problem should accompany any supplemental or intermittent monitoring records occurring as a result of EDMS failure.
- (f) Section C - General Record Keeping Requirements contains the Permittee's obligation with regard to the records required to be maintained by this condition.

D.3.14 Reporting Requirements

A quarterly summary of the information to document the compliance status with Conditions D.3.1(b) and D.3.3(a) shall be submitted not later than thirty (30) days after the end of the quarter being reported. Section C - General Reporting Requirements contains the Permittee's obligation with regard to the reporting required by this condition. The report submitted by the Permittee does require a certification that meets the requirements of 326 IAC 2-7-6(1) by a "responsible official" as defined by 326 IAC 2-7-1(35).

SECTION D.4 EMISSIONS UNIT OPERATION CONDITIONS - Kaolin, Hull, and Meal Handling Operations

Emissions Unit Description:

- (j) One (1) flow coating material kaolin handling operation, identified as P3, approved in 1996 for construction, controlled by baghouse C3, and exhausting to Stack 3. This operation consists of the following:
 - (1) One (1) flow coating material kaolin receiving bin.
 - (2) One (1) flow coating material enclosed conveyor system that transfers kaolin to the enclosed mixing screw conveyor, with a nominal throughput rate of 0.459 tons per hour.
- (n) One (1) hull grinding operation, identified as P6, approved in 1996 for construction, with a nominal throughput rate of 8.75 tons per hour, controlled by baghouse C6, and exhausting to Stack 6. This operation is consisting of the following:
 - (1) Two (2) hull grinders.
 - (2) One (1) ground hulls cyclone.
 - (3) One (1) totally enclosed drag conveyor (or equivalent) that transfers hulls from the ground hulls cyclone to the hull hopper.
- (o) One (1) hull storage operation, identified as P7, approved in 1996 for construction, with a nominal throughput rate of 15 tons per hour, controlled by baghouse C7, and exhausting to Stack 7. This operation is consisting of the following:
 - (1) One (1) ground hulls blower that transfers hulls to the Hull storage bins.
 - (2) Hull storage bins, with a nominal capacity of 39,000 cubic feet.
 - (3) Two (2) totally enclosed drag conveyor (or equivalent) that transfers hulls to the ground hulls blower.
 - (4) One (1) ground hulls blower that transfers hulls to the hull hopper.
- (p) One (1) hull handling operation, approved in 1996 for construction, with a nominal throughput rate of 15 tons per hour, controlled by baghouse C7A, and exhausting to Stack 7A. This operation is consisting of the following:
 - (1) One (1) hull hopper that feeds to the pellet mills.
 - (2) Two (2) hull pellet mills, identified as P7A, approved in 1996 for construction, and P7B, approved in 2008 for construction. Only one (1) pellet mill is capable of operating at any given time.
- (q) One (1) hull pellet cooler, identified as P8, approved in 1996 for construction, with a nominal capacity of 15 tons per hour, controlled by cyclone C8, and exhausting to Stack 8.
- (r) Pellet storage operation consisting of the following:
 - (1) Pellet storage bin, identified as P8A, approved in 1996 for construction, with a nominal capacity of 29,000 cubic feet, controlled by baghouse C8A that exhausts to Stack 8A.

Emissions Unit Description:

- (2) Pellet storage building, identified as P8B, approved in 1996 for construction, with a nominal capacity of 70,000 cubic feet, controlled by baghouse C8B that exhausts to Stack 8B.
- (3) Only one pellet storage can receive product at any one time.
- (z) One (1) meal handling process, identified as P9, approved in 1996 for construction and approved in 2016 for modification, with a nominal capacity of 90.7 tons of meal per hour, controlled by baghouse C9, and exhausting to Stack 9. This process consists of the following:
 - (1) One (1) totally enclosed conveyor that transfers the meal to the surge bin or the Screener.
 - (2) One (1) meal surge bin, with a nominal storage capacity of 19,000 cubic feet, that feeds to the recycle leg.
 - (3) One (1) elevator leg that transfers the meal to the sizing process.
 - (4) One (1) meal screener.
 - (5) Three (3) meal grinders.
 - (6) Three (3) meal grinding hoppers.
 - (7) One (1) totally enclosed drag conveyor (or equivalent) that transfers meal from the grinding hoppers to the meal mixing screw conveyor.
 - (8) One (1) enclosed meal mixing screw conveyor (or equivalent) that transfers meal to the mixed meal elevator leg.
 - (9) One (1) mixed meal elevator leg.
 - (10) One (1) totally enclosed drag conveyor (or equivalent) that transfers meal from the mixed meal elevator leg to the meal storage tanks, load out bins and bulk weigh system.
- (aa) One (1) meal storage operation, identified as P20, approved in 1996 for construction, with a nominal throughput rate of 300 tons of meal per hour, controlled by baghouse C20, and exhausting to Stack 20. This operation consists of the following:
 - (1) Meal storage tanks (capacity 292,000 cubic feet) and loadout bin (capacity 29,000 cubic feet), with a combined nominal storage capacity of 321,000 cubic feet.
 - (2) One (1) totally enclosed drag conveyor (or equivalent) that transfers soybean meal from the meal storage tanks to the meal elevator leg.
 - (3) One (1) meal elevator leg that operates at a nominal capacity of 300 tons per hour.
- (bb) One (1) truck meal loadout operation, identified as P14, approved in 1996 for construction, with a nominal throughput rate of 383.3 tons of meal per hour, controlled by baghouse C14, and exhausting to Stack 14. This operation consists of the following:
 - (1) Three (3) totally enclosed drag conveyors (or equivalent) that transfer meal from the meal loadout bins to the truck.

Emissions Unit Description:

- (2) Two (2) truck loadout chutes, with only one chute having flow at any given time.
- (cc) One (1) barge/railcar meal loadout operation, identified as P15, approved in 1996 for construction, with a nominal throughput rate of 383.3 tons of meal per hour, controlled by baghouse C15, and exhausting to Stack 15. This operation consists of the following:
 - (1) One (1) rail and barge loadout scalper with a totally enclosed ball breaker.
 - (2) One (1) rail and barge bulk weigh system consisting of one (1) upper garner, one (1) weigh hopper, and one (1) lower surge. The bulk weigh system is controlled by baghouse C15A, installed in 2013, exhausting to Stack 15A.
 - (3) One (1) totally enclosed drag conveyor (or equivalent) that transfers meal from the lower surge to rail or barge.
 - (4) Two (2) rail loadout systems, with only one system operating at a time.
 - (5) One (1) enclosed conveyor that transfers soybean meal from the lower surge to the barge loadout system.
 - (6) One (1) barge loadout system.

(The information describing the process contained in this facility description box is descriptive information and does not constitute enforceable conditions.)

Emission Limitations and Standards [326 IAC 2-7-5(1)]

D.4.1 PSD Minor Limits [326 IAC 2-2]

In order to render the requirements of 326 IAC 2-2 (PSD) not applicable, the PM, PM₁₀, and PM_{2.5} emissions from the following emission units shall be limited as follows:

Unit ID	Unit Description	Control Device	PM Emission Limit (lbs/hr)	PM ₁₀ Emission Limit (lbs/hr)	PM _{2.5} Emission Limit (lbs/hr)
P3	Kaolin Handling	Baghouse C3	0.10	0.10	0.10
P6	Hull Grinding	Baghouse C6	0.30	0.30	0.30
P7	Hull Storage	Baghouse C7	0.17	0.17	0.17
P7A or P7B	Hull Handling	Baghouse C7A	0.17	0.17	0.17
P8	Hull Pellet Cooler	Cyclone C8	5.14	5.14	5.14
P8A or P8B	Hull Pellet Storage	Baghouse C8A or Bin Vent Filter System C8B	0.17	0.17	0.17
P9	Meal Handling	Baghouse C9	0.67	0.67	0.67
P20	Meal Storage	Baghouse C20	0.26	0.26	0.26
P14	Truck Meal Loadout	Baghouse C14	0.69	0.69	0.69
P15	Barge/Railcar Meal Loadout	Baghouses C15	0.69	0.69	0.69
P15A	Rail & Barge Bulk Weigh System	Baghouse C15A	0.26	0.26	0.26

Compliance with these limits, in combination with the limits in Conditions D.1.2, D.2.1, and D.3.1 and the potential to emit from other units at the source, shall limit the potential to emit PM, PM₁₀, and PM_{2.5} from the entire source to less than 250 tons per twelve (12) consecutive month period, each. Therefore, the requirements of 326 IAC 2-2 (PSD) are not applicable.

D.4.2 Minor Source Modifications [326 IAC 2-7-10.5(d)]

Pursuant to 326 IAC 2-7-10.5(d)(4)(C) (Minor Source Modifications) and MSM 129-25576-00035, issued on January 14, 2008, the baghouse (identified as C7A) to be used in conjunction with the hull handling operation (identified as P7A and P7B) shall comply with the following limits when the hull handling operation is in operation:

- (a) Operate with a control efficiency of at least 99%;
- (b) Have no visible emissions; and
- (c) PM and PM₁₀ emissions shall be less than 5.7 lbs per hour and 3.42 lbs per hour, respectively.

D.4.3 Particulate Emission Limitations [326 IAC 6-3-2]

Pursuant to 326 IAC 6-3-2 (Particulate Emission Limitations for Manufacturing Processes), particulate emissions from each of following operations shall not exceed the pound per hour limits listed in the table below:

Unit ID	Unit Description	Process Rate (tons/hr)	Particulate Emission Limit (lbs/hr)
P3	Kaolin Handling	0.459	2.4
P6	Hull Grinding	8.75	17.5
P7	Hull Storage	15	25.2
P7A or P7B	Hull Handling	15	25.2
P8	Hull Pellet Cooler	15	25.2
P8A or P8B	Hull Pellet Storage	15	25.2
P9	Meal Handling	90.7	50.3
P20	Meal Storage Bins	300	63.0
P14	Truck Meal Loadout	383.3	65.8
P15	Barge/Railcar Meal Loadout	383.3	65.8
P15A	Rail & Barge Bulk Weigh System	383.3	65.8

The pounds per hour limitation were calculated using one the following equations:

- (a) Interpolation of the data for the process weight between one hundred (100) to sixty thousand (60,000) pounds per hour shall be accomplished by use of the equation:

$$E = 4.10 P^{0.67} \quad \text{where } E = \text{rate of emission in pounds per hour; and} \\ P = \text{process weight rate in tons per hour}$$

- (b) Interpolation and extrapolation of the data for the process weight rate in excess of sixty thousand (60,000) pounds per hour shall be accomplished by use of the equation:

$$E = 55.0 P^{0.11} - 40 \quad \text{where } E = \text{rate of emission in pounds per hour; and} \\ P = \text{process weight rate in tons per hour}$$

Pursuant to 326 IAC 6-3-2(e)(3), when the process weight exceeds 200 tons per hour, the maximum allowable emission may exceed the emission limits shown in the table above, provided the concentration of particulate matter in the gas discharged to the atmosphere is less than 0.10 pounds per 1,000 pounds of gases.

D.4.4 Preventive Maintenance Plan [326 IAC 2-7-5(12)]

A Preventive Maintenance Plan is required for these facilities and their control devices. Section B - Preventive Maintenance Plan contains the Permittee's obligation with regard to the preventive maintenance plan required by this condition.

Compliance Determination Requirements [326 IAC 2-7-5(1)]

D.4.5 Particulate Control

- (a) In order to assure compliance with Conditions D.4.1, D.4.2, and D.4.3, each of the following emission units shall be controlled by the associated baghouse or cyclone, as listed in the table below, when these units are in operation:

Unit ID	Unit Description	Control Device
P3	Kaolin Handling	Baghouse C3
P6	Hull Grinding	Baghouse C6
P7	Hull Storage	Baghouse C7
P7A & P7B	Hull Handling	Baghouse C7A
P8	Hull Pellet Cooler	Cyclone C8
P8A or P8B	Hull Pellet Storage	Baghouse C8A or Bin Vent Filter System C8B
P9	Meal Handling	Baghouse C9
P20	Meal Storage	Baghouse C20
P14	Truck Meal Loadout	Baghouse C14
P15	Barge/Railcar Meal Loadout	Baghouse C15
P15A	Rail & Barge Bulk Weigh System	Baghouse C15A

- (b) In the event that bag failure is observed in a multi-compartment baghouse, if operations will continue for ten (10) days or more after the failure is observed before the failed units will be repaired or replaced, the Permittee shall promptly notify the IDEM, OAQ of the expected date the failed units will be repaired or replaced. The notification shall also include the status of the applicable compliance monitoring parameters with respect to normal, and the results of any response actions taken up to the time of notification.

D.4.6 Testing Requirements [326 IAC 2-7-6(1), (6)] [326 IAC 2-1.1-11]

- (a) In order to demonstrate compliance with Conditions D.4.1 and D.4.3, the Permittee shall perform PM, PM₁₀, and PM_{2.5} testing for the rail and barge bulk weigh system baghouse, no later than sixty (60) days after achieving the maximum capacity with the new baghouse, but not later than one hundred eighty (180) days after initial startup of the new baghouse, utilizing methods as approved by the Commissioner at least once every five (5) years from the date of the most recent valid compliance demonstration.
- (b) In order to demonstrate compliance with Conditions D.4.1 and D.4.3, the Permittee shall perform PM, PM₁₀, and PM_{2.5} testing on the exhaust stack (Stack 9) of the replacement meal handling baghouse (C9), no later than sixty (60) days after achieving the maximum capacity of the new meal grinder, but not later than one hundred eighty (180) days after initial startup of the new meal grinder, utilizing methods as approved by the Commissioner. The test shall be repeated at least once every five (5) years from the date of the most recent valid compliance demonstration.

Testing shall be conducted in accordance with the provisions of 326 IAC 3-6 (Source Sampling Procedures). Section C – Performance Testing contains the Permittee’s obligation with regard to the performance testing required by this condition. PM₁₀ and PM_{2.5} include filterable and condensable PM.

Compliance Monitoring Requirements [326 IAC 2-7-6(1)] [326 IAC 2-7-5(1)]

D.4.7 Visible Emissions Notations [40 CFR 64]

- (a) Pursuant to 40 CFR 64 (CAM), visible emission notations of the exhausts from the Stacks 6, 8, 9, 20, 14, 15, and 15A shall be performed daily during normal daylight operations. A trained employee shall record whether emissions are normal or abnormal.

- (b) Visible emission notations of the exhausts from the Stacks 3, 7, 7A, 8A, and 8B shall be performed daily during normal daylight operations. A trained employee shall record whether emissions are normal or abnormal.
- (c) For processes operated continuously, "normal" means those conditions prevailing, or expected to prevail, eighty percent (80%) of the time the process is in operation, not counting startup or shut down time.
- (d) In the case of batch or noncontinuous operations, readings shall be taken during that part of the operation that would normally be expected to cause the greatest emissions.
- (e) A trained employee is an employee who has worked at the plant at least one (1) month and has been trained in the appearance and characteristics of normal visible emissions for that specific process.
- (f) If abnormal emissions are observed, the Permittee shall take a reasonable response. Section C - Response to Excursions or Exceedances contains the Permittee's obligation with regard to the reasonable response steps required by this condition. Failure to take response steps shall be considered a deviation from this permit.

D.4.8 Parametric Monitoring [40 CFR 64]

- (a) Pursuant to 40 CFR 64 (CAM), the Permittee shall record the pressure drop across the baghouses used in conjunction with the hull grinding operation (P6), the meal handling process (P9), the meal storage operation (P20), the truck meal loadout operation (P14), and the barge/railcar meal loadout operation (P15), and the rail and barge bulk weigh system (P15A) at least once per day when any of these operations is in operation. When, for any one reading, the pressure drop across the baghouse is outside of the normal range, the Permittee shall take a reasonable response. The normal range for this unit is a pressure drop between 3.0 and 9.0 inches of water unless a different upper-bound or lower-bound value for this range is determined during the latest stack test.
- (b) The Permittee shall record the pressure drop across the baghouses used in conjunction with the kaolin handling operation (P3), the hull storage and operation (P7), the hull handling operation (P7A or P7B), and the pellet storage bins (P8A or P8B), at least once per day when the any of the these operations is in operation. When, for any one reading, the pressure drop across the baghouse is outside of the normal range, the Permittee shall take a reasonable response. The normal range for this unit is a pressure drop between 3.0 and 9.0 inches of water unless a different upper-bound or lower-bound value for this range is determined during the latest stack test.
- (c) Section C - Response to Excursions or Exceedances contains the Permittee's obligation with regard to the reasonable response steps required by this condition. A pressure reading that is outside the above mentioned range is not a deviation from this permit. Failure to take response steps shall be considered a deviation from this permit.
- (d) The instrument used for determining the pressure shall comply with Section C - Instrument Specifications, of this permit, shall be subject to approval by IDEM, OAQ, and shall be calibrated or replaced at least once every six (6) months.

D.4.9 Broken or Failed Bag Detection

- (a) For a single compartment baghouse controlling emissions from a process operated continuously, a failed unit and the associated process shall be shut down immediately until the failed unit has been repaired or replaced. Operations may continue only if the event qualifies as an emergency and the Permittee satisfies the requirements of the emergency provisions of this permit (Section B - Emergency Provisions).

- (b) For a single compartment baghouse controlling emissions from a batch process, the feed to the process shall be shut down immediately until the failed unit has been repaired or replaced. The emissions unit shall be shut down no later than the completion of the processing of the material in the line. Operations may continue only if the event qualifies as an emergency and the Permittee satisfies the requirements of the emergency provisions of this permit (Section B - Emergency Provisions).

Bag failure can be indicated by a significant drop in the baghouse's pressure reading with abnormal visible emissions, by an opacity violation, or by other means such as gas temperature, flow rate, air infiltration, leaks, dust traces or triboflows.

D.4.10 Cyclone Failure Detection

In the event that cyclone failure has been observed:

Failed units and the associated process will be shut down immediately until the failed units have been repaired or replaced. The emissions unit shall be shut down no later than the completion of the processing of the material in the line. Operations may continue only if the event qualifies as an emergency and the Permittee satisfies the requirements of the emergency provisions of this permit (Section B - Emergency Provisions).

Record Keeping and Reporting Requirements [326 IAC 2-7-5(3)] [326 IAC 2-7-19]

D.4.11 Record Keeping Requirements

- (a) To document the compliance status with Condition D.4.6, the Permittee shall maintain records of the daily visible emission notations. The Permittee shall include in its daily record when a visible emission notation is not taken and the reason for the lack of visible emission notation (e.g. the process did not operate that day).
- (b) To document the compliance status with Condition D.4.7, the Permittee shall maintain once per day records of the pressure drop during normal operation for baghouses. The Permittee shall include in its daily record when a pressure drop reading is not taken and the reason for the lack of a pressure drop reading (e.g. the process did not operate that day).
- (c) Section C - General Record Keeping Requirements contains the Permittee's obligation with regard to the records required to be maintained by this condition.

SECTION D.5 EMISSIONS UNIT OPERATION CONDITIONS

Emissions Unit Description - Insignificant Activities

- (a) Degreasing operations that do not exceed 145 gallons per twelve (12) months, except if subject to 326 IAC 20-6. [326 IAC 8-3-2] [326 IAC 8-3-8]
- (e) Two (2) natural gas-fired heaters, identified as Welfare Building Heaters 1 and 2, Welfare Building Heater 2 was constructed in 2008 and Welfare Building Heater 1 was constructed in 2011, each with a heat input capacity of 0.22 MMBtu/hr.

(The information describing the process contained in this facility description box is descriptive information and does not constitute enforceable conditions.)

Emission Limitations and Standards [326 IAC 2-7-5(1)]

D.5.1 Cold Cleaner Degreaser Control Equipment and Operating Requirements [326 IAC 8-3-2]

Pursuant to 326 IAC 8-3-2 (Cold Cleaner Degreaser Control and Equipment Operating Requirements), the Permittee shall:

- (a) Ensure the following control equipment and operating requirements are met:
 - (1) Equip the degreaser with a cover.
 - (2) Equip the degreaser with a device for draining cleaned parts.
 - (3) Close the degreaser cover whenever parts are not being handled in the degreaser.
 - (4) Drain cleaned parts for at least fifteen (15) seconds or until dripping ceases;
 - (5) Provide a permanent, conspicuous label that lists the operating requirements in subdivisions (3), (4), (6), and (7).
 - (6) Store waste solvent only in closed containers.
 - (7) Prohibit the disposal or transfer of waste solvent in such a manner that could allow greater than twenty percent (20%) of the waste solvent (by weight) to evaporate into the atmosphere.
- (b) Ensure the following additional control equipment and operating requirements are met:
 - (1) Equip the degreaser with one (1) of the following control devices if the solvent is heated to a temperature of greater than forty-eight and nine-tenths (48.9) degrees Celsius (one hundred twenty (120) degrees Fahrenheit):
 - (A) A freeboard that attains a freeboard ratio of seventy-five hundredths (0.75) or greater.
 - (B) A water cover when solvent used is insoluble in, and heavier than, water.
 - (C) A refrigerated chiller.
 - (D) Carbon adsorption.
 - (E) An alternative system of demonstrated equivalent or better control as those outlined in clauses (A) through (D) that is approved by the department. An alternative system shall be submitted to the U.S. EPA as a SIP revision.

- (2) Ensure the degreaser cover is designed so that it can be easily operated with one (1) hand if the solvent is agitated or heated.
- (3) If used, solvent spray:
 - (A) must be a solid, fluid stream; and
 - (B) shall be applied at a pressure that does not cause excessive splashing.

D.5.2 Material Requirements for Cold Cleaner Degreasers [326 IAC 8-3-8]

Pursuant to 326 IAC 8-3-8 (Material Requirements for Cold Cleaner Degreasers), on and after January 1, 2015, the Permittee shall not operate a cold cleaning degreaser with a solvent vapor pressure that exceeds one (1) millimeter of mercury (nineteen-thousandths (0.019) pound per square inch) measured at twenty (20) degrees Celsius (sixty-eight (68) degrees Fahrenheit).

D.5.3 Particulate Emission Limitations for Sources of Indirect Heating [326 IAC 6-2-4]

Pursuant to 326 IAC 6-2-4, particulate emissions from Welfare Building Heater 1 and Welfare Building Heater 2 shall be limited to 0.269 pounds per MMBtu heat input, each.

Record Keeping and Reporting Requirement [326 IAC 2-7-5(3)] [326 IAC 2-7-19]

D.5.4 Record Keeping Requirements

To document the compliance status with Condition D.5.2, on and after January 1, 2015, the Permittee shall maintain the following records for each purchase of solvent used in the cold cleaner degreasing operations. These records shall be retained on-site or accessible electronically for the most recent three (3) year period and shall be reasonably accessible for an additional two (2) year period.

- (a) The name and address of the solvent supplier.
- (b) The date of purchase.
- (c) The type of solvent purchased.
- (d) The total volume of the solvent purchased.
- (e) The true vapor pressure of the solvent measured in millimeters of mercury at twenty (20) degrees Celsius (sixty-eight (68) degrees Fahrenheit).

SECTION E.1

NSPS and NESHAP

Emissions Unit Description:

- (a) Three (3) 33.7 million (MM)Btu per hour natural gas boilers, identified as P17, P18, and P18A, approved in 1996 for construction, and exhausting to Stacks 17, 18, and 18A, respectively. Under NSPS, Subpart Dc, boilers P17, P18, and P18A are considered small industrial-commercial-institutional steam generating units.
- (b) Two (2) wood/shredded tire fired boilers, identified as P17B and P17C, approved in 2006 for construction, each with a nominal heat input capacity of 57.3 MMBtu/hr, both controlled by one (1) electrostatic precipitator (ESP) (identified as ES1), and exhausting through Stack 17A. Stack 17A is equipped with a continuous opacity monitoring system (COMS). Under NSPS, Subpart Dc, boilers P17B and P17C are considered small industrial-commercial-institutional steam generating units.

(The information describing the process contained in this facility description box is descriptive information and does not constitute enforceable conditions.)

New Source Performance Standards (NSPS) Requirements [326 IAC 2-7-5(1)]

E.1.1 General Provisions Relating to New Source Performance Standards [326 IAC 12-1] [40 CFR 60, Subpart A]

- (a) Pursuant to 40 CFR 60.1, the Permittee shall comply with the provisions of 40 CFR Part 60 Subpart A – General Provisions, which are incorporated by reference as 326 IAC 12-1 for the facilities described in Section E.1 except as otherwise specified in 40 CFR Part 60, Subpart Dc.
- (b) Pursuant to 40 CFR 60.10, the Permittee shall submit all required notifications and reports to:

Indiana Department of Environmental Management
Compliance Branch, Office of Air Quality
100 North Senate Avenue,
MC 61-53 IGCN 1003
Indianapolis, Indiana 46204

E.1.2 Standards of Performance for Small Industrial-Commercial-Institutional Steam Generating Units [40 CFR 60, Subpart Dc] [326 IAC 12]

The Permittee shall comply with the following provisions of 40 CFR 60, Subpart Dc (included as Attachment A to this permit), which are incorporated by reference as 326 IAC 12:

- (a) 40 CFR 60.40c;
- (b) 40 CFR 60.41c;
- (c) 40 CFR 60.43c(b), (c), (d), (e)(1), (e)(2), (e)(3);
- (d) 40 CFR 60.45c(a), (b), (c);
- (e) 40 CFR 60.47c(a), (b), (d), (e), (g); and
- (f) 40 CFR 60.48c(a), (c), (g), (h), (i), (j).

SECTION E.2

NSPS and NESHAP

Emissions Unit Description:

(c) One (1) north truck receiving area, identified as P24, approved in 2001 for construction, with a nominal throughput capacity of 360 tons per hour, controlled by baghouse C24, and exhausting to Stack 24. Under NSPS, Subpart DD, this unit is considered a truck unloading station.

(d) One (1) north house bin loading area, identified as P27, approved in 2001 for construction, with a nominal throughput capacity of 360 tons per hour, and exhausting inside the north house, consisting of the following:

- (1) One (1) totally enclosed aspirated elevator leg that transfers soybeans to enclosed conveyors.
- (2) Two (2) enclosed conveyors that transfer the soybean from the north receiving area to the soybean storage areas.

Under NSPS, Subpart DD, this area is considered a grain handling operation.

(f) One (1) truck only soybean receiving area, identified as P1, approved in 1996 for construction, with a nominal throughput capacity of 600 tons per hour. This area consists of the following:

- (1) One (1) truck only receiving pit.
- (2) One (1) totally enclosed belt conveyor system (or equivalent), using an oil application to control PM emissions.
- (3) One (1) aspirated soybean receiving leg, controlled by an oil application to control PM emissions and also controlled by baghouse C1, exhausting to Stack 1.
- (4) One (1) enclosed belt conveyor that transfers the soybean from the receiving leg to the soybean enclosed belt conveyor.
- (5) One (1) enclosed belt conveyor that loads the soybean storage silos.

Under NSPS, Subpart DD, the emission units at this area are considered a truck unloading station and grain handling operations.

(g) One (1) truck and railcar soybean receiving area, identified as P2, approved in 1996 for construction, with a nominal throughput capacity of 540 tons per hour, consisting of the following:

- (1) One (1) truck and railcar receiving pit, with PM emissions controlled by restricting vehicles unloading grain at these stations to hopper-bottom rail cars and trucks with choke unloading applications.
- (2) One (1) enclosed drag conveyor system (or equivalent), using an oil application to control PM emissions.
- (3) Two (2) aspirated soybean receiving legs, using an oil application to control PM emissions and also controlled by baghouse C1, exhausting to Stack 1.
- (4) One (1) aspirated bulkweigher, using and oil application to control PM emissions and

also controlled by baghouse C1, exhausting to Stack 1.

- (5) One (1) enclosed drag conveyor that transfers the soybean at a nominal rate of 540 tons per hour from the receiving leg to the soybean covered belt conveyor that loads the soybean silos.

Under NSPS, Subpart DD, the emission units at this area are considered truck and railcar unloading stations and grain handling operations.

- (h) One (1) annex silo loading operation, identified as P2A, approved in 1996 for construction, with a nominal throughput rate of 1,740 tons per hour, controlled by an oil application system, and consisting of the following:

- (1) Twelve (12) concrete soybean silos, each with a nominal storage capacity of 73,053 bushels.
- (2) Four (4) concrete soybean storage silos, each with a nominal capacity of 19,375 bushels.
- (3) Two (2) concrete soybean storage silos, each with a nominal capacity of 18,801 bushels.
- (4) Three (3) totally enclosed drag conveyors (or equivalent) comprising two conveyance systems located below the storage silos that transfer the soybeans from the silos to the elevator legs.

Under NSPS, Subpart DD, this silo loading operation is considered a grain handling operation.

- (i) One (1) soybean storage system, identified as P2B, approved in 2002 for construction and approved in 2009 for modification, with a nominal throughput of 116.4 tons per hour, controlled by an oil application system, and consisting of the following:

- (1) Two (2) soybean silos (P2B and P2C), with a nominal combined storage capacity of 1,177,000 bushels.
- (2) Two (2) enclosed belt conveyors.
- (3) Two (2) enclosed drag conveyors.

Under NSPS, Subpart DD, this soybean storage system is considered a grain handling operation.

- (k) One (1) soybean cleaning system, identified as P4, approved in 1996 for construction, with a nominal throughput rate of 125 tons per hour, controlled by baghouse C4, and exhausting to stack C4. This system consists of the following:

- (1) Two (2) soybean elevator legs that transfer the soybeans from the drag conveyor to the cleaner, using an oil application to control PM emissions.
- (2) One (1) totally enclosed conveyor that transfers the soybeans from the elevator legs to the cleaner.
- (3) One (1) cleaning system, consisting of the following:
 - (A) Two (2) cleaners, controlled by an oil application system and baghouse C4.

- (B) Two (2) whole bean aspirators, controlled by an oil application system and baghouse C4.
- (C) One (1) conveyor transferring beans from the aspirator to the hopper, controlled by an oil application system and baghouse C4.
- (D) One (1) hopper, controlled by an oil application system and baghouse C4.
- (E) One (1) scale, controlled by an oil application system and baghouse C4.
- (F) Two (2) pods aspirators, approved in 2014 for construction, identified as P4A, with a maximum capacity of 125 tons per hour, controlled by baghouse C4A and exhausting through stack 4A.
- (G) One (1) pods aspirator, controlled by cyclone C5E, and exhausting to stack 5.
- (H) One (1) pods breaker, controlled by cyclone C5E, and exhausting to stack 5.

Under NSPS, Subpart DD, this cleaning system is considered a grain handling operation.

(The information describing the process contained in this facility description box is descriptive information and does not constitute enforceable conditions.)

New Source Performance Standards (NSPS) Requirements [326 IAC 2-7-5(1)]

E.2.1 General Provisions Relating to New Source Performance Standards [326 IAC 12-1] [40 CFR 60, Subpart A]

- (a) Pursuant to 40 CFR 60.1, the Permittee shall comply with the provisions of 40 CFR Part 60 Subpart A – General Provisions, which are incorporated by reference as 326 IAC 12-1 for the facilities described in Section E.2 except as otherwise specified in 40 CFR Part 60, Subpart DD.
- (b) Pursuant to 40 CFR 60.10, the Permittee shall submit all required notifications and reports to:

Indiana Department of Environmental Management
Compliance Branch, Office of Air Quality
100 North Senate Avenue,
MC 61-53 IGCN 1003
Indianapolis, Indiana 46204

E.2.2 Standards of Performance for Grain Elevators [40 CFR 60, Subpart DD] [326 IAC 12]

The Permittee shall comply with the following provisions of 40 CFR 60, Subpart DD (included as Attachment B to this permit), which are incorporated by reference as 326 IAC 12:

- (a) 40 CFR 60.300;
- (b) 40 CFR 60.301;
- (c) 40 CFR 60.302(b), (c)(1), (c)(2), (c)(3);
- (d) 40 CFR 60.303; and
- (e) 40 CFR 60.304.

SECTION E.3

NSPS and NESHAP

Emissions Unit Description:

(e) One (1) soybean expander system, approved in 1996 for construction and approved in 2004 for modification, with a nominal capacity of 50 tons per hour. This system consists of the following:

- (1) One (1) expander, forming soybean collets.
- (2) One (1) totally enclosed conveying system transferring material from the expander system to the extraction system.

Under NESHAP, Subpart GGGG, these emission units are considered vegetable oil production processes.

(l) One (1) soybean heater with one (1) L-Path totally enclosed drag conveyor, identified as P21, approved in 1996 for construction and approved in 2008 for replacement, with a nominal capacity of 125 tons per hour, and exhausting to Stack 21. Under NESHAP, Subpart GGGG, the soybean heater is considered vegetable oil production processes.

(m) One (1) soybean cracking and dehulling operation, identified as P5, approved in 1996 for construction, with a nominal throughput rate of 125 tons per hour, and consisting of the following:

- (1) One (1) enclosed drag conveyor (or equivalent) and one (1) totally enclosed overflow recycle L-Path conveyor (or equivalent) with a totally enclosed surge hopper that transfers soybeans to the jet dryers.
- (2) Three (3) jet dryers, each with a nominal capacity of 42 tons per hour, controlled by cyclones C5A, C5B, and C5F, respectively, and exhausting to Stack 5.
- (3) Three (3) primary CCD dryers, controlled by cyclones C5C and C5G, and exhausting to Stack 5.
- (4) Three (3) secondary CCC coolers, controlled by cyclones C5D and C5H, and exhausting to Stack 5.
- (5) Six (6) cracking and dehulling rolls that transfer the hulls through four (4) cyclones (C5C, C5D, C5G, and C5H) to an enclosed conveyor.
- (6) One (1) totally enclosed cracking and dehulling drag conveyor (or equivalent) that transfers hulls from cyclones C5A and C5B to the hull grinding system, with a nominal throughput rate of 8.75 tons per hour.
- (7) One (1) totally enclosed cracking and dehulling drag conveyor (or equivalent) that transfers hulls and aspirated fines from cyclones C5C, C5D, C5F, C5G, C5H, and the totally enclosed auger (or equivalent) of filter C4 to the hull screener and aspirator, with a nominal throughput rate of 8.75 tons per hour.
- (8) Two (2) hull screeners and aspirators, with a total nominal throughput rate of 8.75 tons per hour, controlled by cyclone C5E, and exhausting to Stack 5.

Under NESHAP, Subpart GGGG, these units are considered vegetable oil production processes.

- (s) One (1) soybean flaking operation, identified as P19, approved in 1996 for construction and approved in 2009 and in 2010 for modification, with a nominal throughput rate of 114.0 tons per hour, and consisting of the following:
- (1) One (1) totally enclosed drag conveyor (or equivalent) and one (1) totally enclosed overflow recycle L-Path conveyor (or equivalent) with a totally enclosed surge hopper that transfers beans from cracking and dehulling to the flakers.
 - (2) Ten (10) flakers, controlled by baghouses C19A, C19B, and C19C, exhausting to Stack 19, and/or controlled by baghouse C19D, exhausting to Stack P19D.
 - (3) Two (2) totally enclosed drag conveyors (or equivalent) in series that transfer soybean flakes and collets from the flakers and the expander system to the feed screw conveyor.
 - (4) One (1) feed screw conveyor that transfers soybean flakes and collets to the extractor.

Under NESHAP, Subpart GGGG, these units are considered vegetable oil production processes.

- (t) One (1) soybean oil extraction system, identified as P13, approved in 1996 for construction, controlled by mineral oil absorber system C13, and exhausting to Stack 13. This system consists of the following:
- (1) One (1) soybean oil extractor, with a nominal capacity of 114.0 tons of soybean flakes and collets per hour and 114.0 tons of hexane per hour.
 - (2) One (1) desolventizer unit, with a nominal capacity of 94.4 tons of spent soybean flakes and collets per hour.
 - (3) A set of evaporators, with a nominal capacity of 24.0 tons of soybean oil per hour.
 - (4) A set of condensers and water separator to separate hexane and water, with a nominal capacity of 24.0 tons of soybean oil per hour.
 - (5) One (1) totally enclosed drag conveyor (or equivalent) that transfers flakes and hexane to the desolventizer at a nominal rate of 94.4 tons per hour and 37.5 tons per hour, respectively.

Under NESHAP, Subpart GGGG, these units are considered vegetable oil production processes.

- (u) One (1) DTDC meal dryer section 1, identified as P10, approved in 1996 for construction, with a nominal drying capacity of 90.7 tons of meal per hour, controlled by cyclone C10, and exhausting to Stack 10. Under NESHAP, Subpart GGGG, this unit is considered a vegetable oil production process.
- (v) One (1) DTDC meal dryer section 2, identified as P11, approved in 1996 for construction, with a nominal drying capacity of 90.7 tons of meal per hour, controlled by cyclone C11, and exhausting to Stack 11. Under NESHAP, Subpart GGGG, this unit is considered a vegetable oil production process.
- (w) One (1) DTDC meal dryer section 3, identified as P12, approved in 2009 for modification, with a nominal capacity of 90.7 tons of meal per hour, controlled by cyclone C12, and exhausting to

Stack 12. Under NESHAP, Subpart GGGG, this unit is considered a vegetable oil production process.

- (x) One (1) enclosed conveyor transferring meal from the meal dryer section 3 to the meal cooling operation, approved in 2009 for construction. Under NESHAP, Subpart GGGG, this unit is considered a vegetable oil production process.
- (y) One (1) meal cooling operation, identified as P12A, approved in 2009 for construction, with a nominal capacity of 90.7 tons of meal per hour, controlled by cyclone C12A, and exhausting to Stack 12A. This operation consists of the following:
 - (1) Two (2) meal cooler sections, exhausting to the common cyclone C12A and Stack 12A.
 - (2) One (1) Meal Cooler enclosed drag conveyor (or equivalent) that transfers meal from the Meal Cooler and the C12A Cyclone to the one (1) DTDC enclosed drag conveyor.
 - (3) One (1) DTDC enclosed drag conveyor (or equivalent) that transfers meal from the Meal Cooler/DTDC and four (4) DTDC cyclones (C10, C11, C12, C12A) to the meal surge bin conveyor.

Under NESHAP, Subpart GGGG, these units are considered vegetable oil production processes.

- (dd) Three (3) fixed roof hexane storage tanks.
 - (1) Two (2) fixed roof hexane storage tanks, approved in 2013 for construction, each with a nominal storage capacity of 12,000 gallons.
 - (2) One (1) horizontal fixed roof hexane storage tank, approved in 2012 for construction, with a nominal storage capacity of 28,000 gallons.

All hexane tanks are vented to the distillation system and exhausted through to Stack 13 (P13). Under NESHAP, Subpart GGGG, these tanks are considered vegetable oil production processes.

- (ee) One (1) fixed roof hexane work tank, approved in 1996 for construction, with a nominal storage capacity of 8,000 gallons. Under NESHAP, Subpart GGGG, this tank is considered a vegetable oil production process.

(The information describing the process contained in this facility description box is descriptive information and does not constitute enforceable conditions.)

National Emission Standards for Hazardous Air Pollutants (NESHAP) Requirements [326 IAC 2-7-5(1)]

E.3.1 General Provisions Relating to National Emission Standards for Hazardous Air Pollutants under 40 CFR Part 63 [326 IAC 20-1] [40 CFR Part 63, Subpart A]

- (a) Pursuant to 40 CFR 63.1, the Permittee shall comply with the provisions of 40 CFR Part 63, Subpart A – General Provisions, which are incorporated by reference as 326 IAC 20-1-1, for the emission units listed above, except as otherwise specified in 40 CFR 63 Subpart GGGG.
- (b) Pursuant to 40 CFR 63.10, the Permittee shall submit all required notifications and reports to:

Indiana Department of Environmental Management
Compliance Branch, Office of Air Quality
100 North Senate Avenue,
MC 61-53 IGCN 1003
Indianapolis, Indiana 46204

E.3.2 National Emission Standards for Hazardous Air Pollutants: Solvent Extraction for Vegetable Oil Production [40 CFR Part 63, Subpart GGGG] [326 IAC 20-60]

The Permittee shall comply with the following provisions of 40 CFR 63, Subpart GGGG (included as Attachment C to this permit, for the emission units listed above:

- (a) 40 CFR 63.2830;
- (b) 40 CFR 63.2831;
- (c) 40 CFR 63.2832(a);
- (d) 40 CFR 63.2833;
- (e) 40 CFR 63.2834(a);
- (f) 40 CFR 63.2840 all except (e);
- (g) 40 CFR 63.2850(a), (b), (d), (e)(1)(i), (e)(1)(iii), (e)(2);
- (h) 40 CFR 63.2851;
- (i) 40 CFR 63.2852;
- (j) 40 CFR 63.2853;
- (k) 40 CFR 63.2854;
- (l) 40 CFR 63.2855;
- (m) 40 CFR 63.2860;
- (n) 40 CFR 63.2861;
- (o) 40 CFR 63.2862;
- (p) 40 CFR 63.2863;
- (q) 40 CFR 63.2870;
- (r) 40 CFR 63.2871; and
- (s) 40 CFR 63.2872.

SECTION E.4

NSPS and NESHAP

Emissions Unit Description: Reciprocating Internal Combustion Engines

Specifically Regulated Insignificant Activities

- (c) Emergency generators as follows: one (1) natural gas-fired emergency generator, approved in 1997 for construction, with a nominal generating rate of 343 kilowatts. Under NESHAP, Subpart ZZZZ, this engine is considered an existing affected source.
- (d) Stationary fire pump engines as follows: two (2) diesel-fired pumps, one (1) approved in 1997 for construction and one (1) approved in 2012 for construction, each with a nominal power output rate of 305 hp. Under NESHAP, Subpart ZZZZ, this engine is considered a new affected source.

(The information describing the process contained in this facility description box is descriptive information and does not constitute enforceable conditions.)

National Emission Standards for Hazardous Air Pollutants (NESHAP) Requirements [326 IAC 2-7-5(1)]

E.4.1 General Provisions Relating to National Emission Standards for Hazardous Air Pollutants under 40 CFR Part 63 [326 IAC 20-1] [40 CFR Part 63, Subpart A]

- (a) Pursuant to 40 CFR 63.1, the Permittee shall comply with the provisions of 40 CFR Part 63, Subpart A – General Provisions, which are incorporated by reference as 326 IAC 20-1-1, for the emission units listed above, except at otherwise specified in 40 CFR Part 63, Subpart ZZZZ.
- (b) Pursuant to 40 CFR 63.10, the Permittee shall submit all required notifications and reports to:

Indiana Department of Environmental Management
Compliance Branch, Office of Air Quality
100 North Senate Avenue,
MC 61-53 IGCN 1003
Indianapolis, Indiana 46204

E.4.2 National Emission Standards for Hazardous Air Pollutants: Stationary Reciprocating Internal Combustion Engines [40 CFR Part 63, Subpart ZZZZ] [326 IAC 20-82]

The Permittee shall comply with the following provisions of 40 CFR Part 63, Subpart ZZZZ (included as Attachment D to this permit), which are incorporated by reference as 326 IAC 20-82, for the emission units as follows:

- (a) for the natural gas-fired emergency generator:
 - (1) 40 CFR 63.6580;
 - (2) 40 CFR 63.6585(a), (b);
 - (3) 40 CFR 63.6590(a)(1)(ii);
 - (4) 40 CFR 63.6595(a)(1), (c);
 - (5) 40 CFR 63.6602;
 - (6) 40 CFR 63.6605;
 - (7) 40 CFR 63.6612;
 - (8) 40 CFR 63.6620;
 - (9) 40 CFR 63.6625(e)(2), (f), (h), (j);
 - (10) 40 CFR 63.6630;

- (11) 40 CFR 63.6635;
- (12) 40 CFR 63.6640(a), (b), (f);
- (13) 40 CFR 63.6645(a)(5);
- (14) 40 CFR 63.6650(a), (b), (c)(1) through (c)(5), (d), (f);
- (15) 40 CFR 63.6655(a), (d), (e)(2);
- (16) 40 CFR 63.6660;
- (17) 40 CFR 63.6665;
- (18) 40 CFR 63.6670;
- (19) 40 CFR 63.6675;
- (20) Table 2c to 40 CFR 63 Subpart ZZZZ;
- (21) Table 4 to 40 CFR 63 Subpart ZZZZ;
- (22) Table 6 to 40 CFR 63 Subpart ZZZZ and;
- (23) Table 7 to 40 CFR 63 Subpart ZZZZ.

(b) for the stationary fire pump engine approved in 1997 for construction:

- (1) 40 CFR 63.6580;
- (2) 40 CFR 63.6585(a), (b);
- (3) 40 CFR 63.6590(a)(1)(ii);
- (4) 40 CFR 63.6595(a)(1), (c);
- (5) 40 CFR 63.6602;
- (6) 40 CFR 63.6604(b);
- (7) 40 CFR 63.6605;
- (8) 40 CFR 63.6612;
- (9) 40 CFR 63.6620;
- (10) 40 CFR 63.6625(e)(2), (f), (g), (h), (i);
- (11) 40 CFR 63.6630;
- (12) 40 CFR 63.6635;
- (13) 40 CFR 63.6640(a), (b), (f);
- (14) 40 CFR 63.6645(a)(5);
- (15) 40 CFR 63.6650(a), (b), (c)(1) through (c)(5), (d), (f);
- (16) 40 CFR 63.6655(a), (d), (e)(2);
- (17) 40 CFR 63.6660;
- (18) 40 CFR 63.6665;
- (19) 40 CFR 63.6670;
- (20) 40 CFR 63.6675;
- (21) Table 2c to 40 CFR 63 Subpart ZZZZ;
- (22) Table 4 to 40 CFR 63 Subpart ZZZZ;
- (23) Table 6 to 40 CFR 63 Subpart ZZZZ; and
- (24) Table 7 to 40 CFR 63 Subpart ZZZZ.

(c) for the stationary fire pump engine approved in 2012 for construction:

- (1) 40 CFR 63.6580;
- (2) 40 CFR 63.6585(a), (b);
- (3) 40 CFR 63.6590(a)(2)(ii), (c)(6);
- (4) 40 CFR 63.6595(a)(5), (c);
- (5) 40 CFR 63.6665;
- (6) 40 CFR 63.6670;
- (7) 40 CFR 63.6675;

SECTION E.5

NSPS and NESHAP

Emissions Unit Description:

- (a) Three (3) 33.7 MMBtu per hour natural gas fired boilers, identified as P17, P18, and P18A, approved in 1996 for construction, and exhausting to Stacks 17, 18, and 18A, respectively. Under NESHAP, Subpart DDDDD, boilers P17, P18, and P18A are considered part of the existing, affected source.
- (b) Two (2) wood/shredded tire fired boilers, identified as P17B and P17C, approved in 2006 for construction, each with a nominal heat input capacity of 57.3 MMBtu/hr, both controlled by one (1) electrostatic precipitator (ESP) (identified as ES1), and exhausting through Stack 17A. Stack 17A is equipped with a continuous opacity monitoring system (COMS). Under NESHAP, Subpart DDDDD, boilers P17B and P17C are considered part of the existing, affected source.

(The information describing the process contained in this facility description box is descriptive information and does not constitute enforceable conditions.)

National Emission Standards for Hazardous Air Pollutants (NESHAP) Requirements [326 IAC 2-7-5(1)]

E.5.1 General Provisions Relating to National Emission Standards for Hazardous Air Pollutants under 40 CFR Part 63 [326 IAC 20-1] [40 CFR Part 63, Subpart A]

- (a) Pursuant to 40 CFR 63.1, the Permittee shall comply with the provisions of 40 CFR Part 63, Subpart A – General Provisions, which are incorporated by reference as 326 IAC 20-1-1 for the emission units listed above, except as otherwise specified in 40 CFR 63, Subpart DDDDD.
- (b) Pursuant to 40 CFR 63.10, the Permittee shall submit all required notifications and reports to:

Indiana Department of Environmental Management
Compliance Branch, Office of Air Quality
100 North Senate Avenue,
MC 61-53 IGCN 1003
Indianapolis, Indiana 46204

E.5.2 National Emission Standards for Hazardous Air Pollutants for Industrial, Commercial, and Institutional Boilers and Process Heaters [40 CFR 63, Subpart DDDDD] [326 IAC 20-95]

The Permittee shall comply with the following provisions of 40 CFR Part 63, Subpart DDDDD (included as Attachment E to this permit), which are incorporated by reference as 326 IAC 20-95, for the emission units as follows:

- (a) for the natural gas fired boilers (P17, P18, and P18A):

- (1) 40 CFR 63.7480
- (2) 40 CFR 63.7485
- (3) 40 CFR 63.7490(a)(1) and (d)
- (4) 40 CFR 63.7491
- (5) 40 CFR 63.7495(b),(d), and (g)
- (6) 40 CFR 63.7499
- (7) 40 CFR 63.7500(a), (b), (e), and (f)
- (8) 40 CFR 63.7501
- (9) 40 CFR 63.7505
- (10) 40 CFR 63.7510

- (11) 40 CFR 63.7515
- (12) 40 CFR 63.7520(a), (b), (d), (e), and (f)
- (13) 40 CFR 63.7545(a), (b) and (f)
- (14) 40 CFR 63.7550 (a) through (d), and (h)
- (15) 40 CFR 63.7555(a), (h), (i), and (j)
- (16) 40 CFR 63.7560
- (17) 40 CFR 63.7565
- (18) 40 CFR 63.7570
- (19) 40 CFR 63.7575
- (20) Table 3 (items 3 and 4) to 40 CFR 63, Subpart DDDDD
- (21) Table 10 to 40 CFR 63, Subpart DDDDD

(b) for the wood/shredded tire fired boilers (P17B and P17C):

- (1) 40 CFR 63.7480
- (2) 40 CFR 63.7485
- (3) 40 CFR 63.7490
- (4) 40 CFR 63.7495(b) and (d)
- (5) 40 CFR 63.7499
- (6) 40 CFR 63.7500
- (7) 40 CFR 63.7501
- (8) 40 CFR 63.7505
- (9) 40 CFR 63.7507
- (10) 40 CFR 63.7510(a), (b), (c), and (d)
- (11) 40 CFR 63.7515

SECTION E.6

NSPS and NESHAP

Emissions Unit Description:

One (1) stationary diesel-fired fire pump engine, approved in 2012 for construction, with a nominal power output rate of 305 hp. Under NSPS, Subpart IIII, this engine is an affected source.

(The information describing the process contained in this facility description box is descriptive information and does not constitute enforceable conditions.)

New Source Performance Standards (NSPS) Requirements [326 IAC 2-7-5(1)]

E.6.1 General Provisions Relating to New Source Performance Standards [326 IAC 12-1] [40 CFR 60, Subpart A]

(a) Pursuant to 40 CFR 60.1, the Permittee shall comply with the provisions of 40 CFR Part 60 Subpart A – General Provisions, which are incorporated by reference as 326 IAC 12-1 for the emission units listed above, except as otherwise specified in 40 CFR Part 60, Subpart IIII.

(b) Pursuant to 40 CFR 60.10, the Permittee shall submit all required notifications and reports to:

Indiana Department of Environmental Management
Compliance Branch, Office of Air Quality
100 North Senate Avenue,
MC 61-53 IGCN 1003
Indianapolis, Indiana 46204

E.6.2 Standards of Performance for Stationary Compression Ignition Internal Combustion Engines [40 CFR 60, Subpart IIII] [326 IAC 12]

The Permittee shall comply with the following provisions of 40 CFR 60, Subpart IIII (included as Attachment F to this permit), which are incorporated by reference as 326 IAC 12:

- (1) 40 CFR 60.4200(a)(2)(ii) and (a)(4)
- (2) 40 CFR 60.4205(c) and (e)
- (3) 40 CFR 60.4206
- (4) 40 CFR 60.4207(b)
- (5) 40 CFR 60.4208
- (6) 40 CFR 60.4209(a)
- (7) 40 CFR 60.4211(a), (c), (f), and (g)(2)
- (8) 40 CFR 60.4212(a), (c), (e), (f), and (g)
- (9) 40 CFR 60.4214(b) and (d)
- (10) 40 CFR 60.4218
- (11) 40 CFR 60.4219
- (12) Table 4 to 40 CFR 60, Subpart IIII
- (13) Table 5 to 40 CFR 60, Subpart IIII
- (14) Table 8 to 40 CFR 60, Subpart IIII

Significant Source and Permit Modification**

Source Description and Location

Source Name:	Consolidated Grain and Barge Co.
Source Location:	2781 Bluff Road, Mt. Vernon, Indiana 47620
County:	Posey
SIC Code:	2075 (Soybean Oil Mills)
Operation Permit Renewal No.:	T 129-31079-00035
Operation Permit Renewal Issuance Date:	January 25, 2013
Significant Source Modification No.:	129-36267-00035
Significant Permit Modification No.:	129-36269-00035
Permit Reviewer:	Madhurima Moulik

Existing Approvals

The source was issued Part 70 Operating Permit Renewal No. T129-31079-00035 on January, 25, 2013. The source has since received the following approvals:

- (a) Significant Source Modification No. 129-33092-00035, issued on August 28, 2013;
- (b) Significant Permit Modification No. 129-33315-00035, issued on October 9, 2013;
- (c) Administrative Amendment No. 129-34009-00035, issued on January 2, 2014;
- (d) Administrative Amendment No. 129-33867-00035, issued on January 17, 2014;
- (e) Significant Source Modification No. 129-34318-00035, issued on November 10, 2014;
and
- (f) Significant Permit Modification No. 129-34338-00035, issued on December 2, 2014.

County Attainment Status

The source is located in Posey County.

Pollutant	Designation
SO ₂	Better than national standards.
CO	Unclassifiable or attainment effective November 15, 1990.
O ₃	Unclassifiable or attainment effective July 20, 2012, for the 2008 8-hour ozone standard. ¹
PM _{2.5}	Unclassifiable or attainment effective April 5, 2005, for the annual PM _{2.5} standard.
PM _{2.5}	Unclassifiable or attainment effective December 13, 2009, for the 24-hour PM _{2.5} standard.
PM ₁₀	Unclassifiable effective November 15, 1990.
NO ₂	Cannot be classified or better than national standards.
Pb	Unclassifiable or attainment effective December 31, 2011.
¹ Unclassifiable or attainment effective October 18, 2000, for the 1-hour ozone standard which was revoked effective June 15, 2005.	

- (a) Ozone Standards
Volatile organic compounds (VOC) and Nitrogen Oxides (NO_x) are regulated under the Clean Air Act (CAA) for the purposes of attaining and maintaining the National Ambient Air Quality Standards (NAAQS) for ozone. Therefore, VOC and NO_x emissions are considered when evaluating the rule applicability relating to ozone. Posey County has

been designated as attainment or unclassifiable for ozone. Therefore, VOC and NO_x emissions were reviewed pursuant to the requirements for Prevention of Significant Deterioration (PSD), 326 IAC 2-2.

- (b) **PM_{2.5}**
Posey County has been classified as attainment for PM_{2.5}. Therefore, direct PM_{2.5}, SO₂, and NO_x emissions were reviewed pursuant to the requirements for Prevention of Significant Deterioration (PSD), 326 IAC 2-2.
- (c) **Other Criteria Pollutants**
Posey County has been classified as attainment or unclassifiable in Indiana for all other criteria pollutants. Therefore, these emissions were reviewed pursuant to the requirements for Prevention of Significant Deterioration (PSD), 326 IAC 2-2.

Fugitive Emissions

The source includes a grain elevator which supports the soybean oil extraction plant.

- (1) Since this source is classified as a soybean oil extraction plant, it is not considered one of the twenty-eight (28) listed source categories, as specified in 326 IAC 2-2 or 326 IAC 2-7. Therefore, fugitive emissions from the soybean oil extraction plant are not counted toward the determination of PSD and Part 70 Permit applicability.
- (2) The grain elevator has an applicable New Source Performance Standard that was in effect on August 7, 1980. However, soybean meal and hull do not meet the definition of "grain" as defined in 40 CFR 60.301(a). Therefore, the fugitive emissions from only the grain receiving and handling operations of the grain elevator are counted toward the determination of PSD and Part 70 Permit applicability.

Source Status - Existing Source

The table below summarizes the potential to emit of the entire source, prior to the proposed modification, after consideration of all enforceable limits established in the effective permits:

Pollutant	Emissions (ton/yr)
PM	231.89
PM ₁₀	213.89
PM _{2.5}	192.28
SO ₂	48.30
NO _x	231.84
VOC	202.59
CO	120.75
Highest Single HAP	>10
Total HAPs	>25

On June 23, 2014, in the case of *Utility Air Regulatory Group v. EPA*, cause no. 12-1146, (available at http://www.supremecourt.gov/opinions/13pdf/12-1146_4g18.pdf) the United States Supreme Court ruled that the U.S. EPA does not have the authority to treat greenhouse gases (GHGs) as an air pollutant for the purpose of determining operating permit applicability or PSD Major source status. On July 24, 2014, the U.S. EPA issued a memorandum to the Regional Administrators outlining next steps in permitting decisions in light of the Supreme Court's decision. U.S. EPA's guidance states that U.S. EPA will no longer require PSD or Title V permits for sources "previously classified as 'Major' based solely on greenhouse gas emissions."

The Indiana Environmental Rules Board adopted the GHG regulations required by U.S. EPA at 326 IAC 2-2-1(zz), pursuant to Ind. Code § 13-14-9-8(h) (Section 8 rulemaking). A rule, or part of

a rule, adopted under Section 8 is automatically invalidated when the corresponding federal rule, or part of the rule, is invalidated. Due to the United States Supreme Court Ruling, IDEM, OAQ cannot consider GHG emissions to determine operating permit applicability or PSD applicability to a source or modification.

- (a) This existing source is not a major stationary source, under PSD (326 IAC 2-2), because no PSD regulated pollutant, excluding GHGs, is emitted at a rate of two hundred fifty (250) tons per year or more and it is not one of the twenty-eight (28) listed source categories, as specified in 326 IAC 2-2-1(ff)(1).
- (b) These emissions are based upon Addendum to TSD (Appendix A) of SPM No. 129-34338-00035.
- (c) This existing source is a major source of HAPs, as defined in 40 CFR 63.2, because HAP emissions are greater than ten (10) tons per year for a single HAP and greater than twenty-five (25) tons per year for a combination of HAPs. Therefore, this source is a major source under Section 112 of the Clean Air Act (CAA).

Description of Proposed Modification

The Office of Air Quality (OAQ) has reviewed a modification application, submitted by Consolidated Grain and Barge Co., on September 14, 2015, relating to modification of the meal handling process P9. This includes the addition of a third meal grinder and hopper to the meal handling process, necessitating an increase in the air flow rate of the baghouse controlling this process. The following is a list of the proposed emission units and pollution control device(s):

- (a) One (1) meal handling process, identified as P9, approved in 1996 for construction and approved in 2016 for modification, with a nominal capacity of 90.7 tons of meal per hour, controlled by baghouse C9, and exhausting to Stack 9. This process consists of the following:
 - (1) One (1) meal grinder.
 - (2) One (1) meal grinding hopper.

Enforcement Issues

There are no pending enforcement actions related to this modification.

Stack Summary

Stack ID	Operation	Height (ft)	Diameter (ft)	Flow Rate (acfm)	Temperature (°F)
Stack 9	Unit 9	10	2.00	12,000	70.0

Emission Calculations

See Appendix A of this Technical Support Document for detailed emission calculations.

Permit Level Determination – Part 70 Modification to an Existing Source

Pursuant to 326 IAC 2-1.1-1(16), Potential to Emit is defined as “the maximum capacity of a stationary source or emission unit to emit any air pollutant under its physical and operational design. Any physical or operational limitation on the capacity of a source to emit an air pollutant, including air pollution control equipment and restrictions on hours of operation or type or amount

of material combusted, stored, or processed shall be treated as part of its design if the limitation is enforceable by the U. S. EPA, IDEM, or the appropriate local air pollution control agency.”

The following table is used to determine the appropriate permit level under 326 IAC 2-7-10.5. This table reflects the PTE before controls. Control equipment is not considered federally enforceable until it has been required in a federally enforceable permit. If the control equipment has been determined to be integral, the table reflects the PTE after consideration of the integral control device.

Increase in PTE Before Controls of the Modification	
Pollutant	Potential to Emit (ton/yr)
PM	62.55
PM ₁₀	62.55
PM _{2.5}	62.55
SO ₂	--
VOC	--
CO	--
NO _x	--
Single HAP	--
Total HAPs	--

This source modification is subject to 326 IAC 2-7-10.5(g)(4)(A) because the modification has a potential to emit of PM, PM10, and PM2.5 of greater than twenty-five (25) tons per year, each. Additionally, the modification will be incorporated into the Part 70 Operating Permit through a significant permit modification issued pursuant to 326 IAC 2-7-12(d) because this modification includes changes to Part 70 terms and conditions that involve a federally enforceable emissions cap assumed to avoid classification as a modification under PSD rules (a provision of Title I of the CAA).

Note: The IDEM, OAQ has received a Significant Source Modification application for a future proposed expansion project submitted by the Permittee. The pending application includes a proposed debottlenecking of the meal grinding process P9. The current project involving the addition of a meal grinder and meal grinding hopper to P9 and the proposed future expansion project will each be independently processed as Significant Source and Significant Permit Modifications under 326 IAC 2-7-10.5 and 326 IAC 2-7-12, respectively. Since each project will be receiving the appropriate construction and operational approvals, the IDEM, OAQ does not believe that there is any scope for circumvention of permitting rules and has therefore determined that aggregation of the projects is not necessary.

Permit Level Determination – PSD

The table below summarizes the potential to emit, reflecting all limits, of the emission units. Any control equipment is considered federally enforceable only after issuance of this Part 70 source modification, and only to the extent that the effect of the control equipment is made practically enforceable in the permit.

Process / Emission Unit	Project Emissions (ton/yr)						
	PM	PM ₁₀	PM _{2.5} *	SO ₂	NO _x	VOC	CO
P9 (Before)	1.13	1.13	1.13	--	--	--	--
P9 (After)	2.93	2.93	2.93	--	--	--	--
Total Increase (Modified Unit P9)	1.80	1.80	1.80	--	--	--	--
PSD Major Source Thresholds	250	250	250	250	250	250	NA
*PM _{2.5} listed is direct PM _{2.5} .							

On June 23, 2014, in the case of *Utility Air Regulatory Group v. EPA*, cause no. 12-1146, (available at http://www.supremecourt.gov/opinions/13pdf/12-1146_4g18.pdf) the United States Supreme Court ruled that the U.S. EPA does not have the authority to treat greenhouse gases (GHGs) as an air pollutant for the purpose of determining operating permit applicability or PSD Major source status. On July 24, 2014, the U.S. EPA issued a memorandum to the Regional Administrators outlining next steps in permitting decisions in light of the Supreme Court's decision. U.S. EPA's guidance states that U.S. EPA will no longer require PSD or Title V permits for sources "previously classified as 'Major' based solely on greenhouse gas emissions."

The Indiana Environmental Rules Board adopted the GHG regulations required by U.S. EPA at 326 IAC 2-2-1(zz), pursuant to Ind. Code § 13-14-9-8(h) (Section 8 rulemaking). A rule, or part of a rule, adopted under Section 8 is automatically invalidated when the corresponding federal rule, or part of the rule, is invalidated. Due to the United States Supreme Court Ruling, IDEM, OAQ cannot consider GHG emissions to determine operating permit applicability or PSD applicability to a source or modification.

This modification to an existing minor PSD stationary source is not major because the emissions increase of each PSD regulated pollutant are less than the PSD major source thresholds. Therefore, pursuant to 326 IAC 2-2, the PSD requirements do not apply.

In order to render the requirements of 326 IAC 2-2 (PSD) not applicable, the PM, PM₁₀, and PM_{2.5} emissions from the following emission unit shall be limited as follows:

Unit ID	Unit Description	Control Device	PM Emission Limit (lbs/hr)	PM ₁₀ Emission Limit (lbs/hr)	PM _{2.5} Emission Limit (lbs/hr)
P9	Meal Handling	Baghouse C9	0.67	0.67	0.67

Compliance with these limits, in combination with the limits in Conditions D.1.2, D.2.1, and D.3.1 and the potential to emit from other units at the source, shall limit the potential to emit PM, PM₁₀, and PM_{2.5} from the entire source to less than 250 tons per twelve (12) consecutive month period, each. Therefore, the requirements of 326 IAC 2-2 (PSD) are not applicable.

Note: The IDEM, OAQ has received a Significant Source Modification application for a future proposed expansion project submitted by the Permittee. The pending application includes a proposed debottlenecking of the meal grinding process P9. The current project involving the addition of a meal grinder and meal grinding hopper to P9 and the proposed future expansion project will each be independently processed as Significant Source and Significant Permit Modifications under 326 IAC 2-7-10.5 and 326 IAC 2-7-12, respectively. Each Significant Source Modification will be minor under 326 IAC 2-2 (PSD), and the entire source shall remain a PSD minor source after issuance of both modification approvals. Since each project will be receiving the appropriate construction

and operational approvals and the source will continue to be minor for PSD after completion of both proposed projects, the IDEM OAQ does not believe that there is any scope for circumvention of permitting rules and has therefore determined that aggregation of the projects is not necessary.

Potential to Emit After Issuance

The table below summarizes the potential to emit, reflecting all limits, of the emission units. Any new control equipment is considered federally enforceable only after issuance of this Part 70 Significant Permit Modification, and only to the extent that the effect of the control equipment is made practically enforceable in the permit.

The table below summarizes the potential to emit of the entire source reflecting adjustment of existing limits, with updated emissions shown as **bold** values and previous emissions shown as ~~strikethrough~~ values.

Process/ Emission Unit	Potential To Emit of the Entire Source After Issuance (tons/year)								
	CO	NOx	PM	PM ₁₀ *	PM _{2.5} **	SO ₂	VOC	Total HAPs	Single HAP

*Under the Part 70 Permit program (40 CFR 70), particulate matter with an aerodynamic diameter less than or equal to a nominal 10 micrometers (PM ₁₀), not particulate matter (PM), is considered as a "regulated air pollutant". **PM _{2.5} listed is direct PM _{2.5} . ***The total PTE is limited to less than 250 tons per year. The table above only lists the fugitive emissions that must be included for Part 70 and PSD Applicability. There are additional sources of fugitive particulate matter that are not counted toward Part 70 and PSD Applicability. †The emissions from P1 and P2 are limited to a total combined throughput of 1,020,000 tons per 12 months.										

This existing minor stationary source will continue to be a minor stationary source under PSD (326 IAC 2-2) after the modification, because no PSD regulated pollutant is emitted at a rate of two hundred fifty (250) tons per year or more and it is not one of the twenty-eight (28) listed source categories, as specified in 326 IAC 2-2-1(ff)(1).

Federal Rule Applicability Determination

New Source Performance Standards (NSPS):

- (a) **Standards of Performance for Grain Elevators [40 CFR 60, Subpart DD]**
 This grain elevator at this source is subject to the Standards of Performance for Grain Elevators (40 CFR 60, Subpart DD), which is incorporated by reference as 326 IAC 12, because it is a plant or installation at which grain is unloaded, handled, cleaned, dried, stored, or loaded, that was constructed after August 3, 1978, and has a grain storage elevator with a permanent storage capacity greater than 1 million bushels. The affected facilities are each truck unloading station, truck loading station, barge and ship unloading station, barge and ship loading station, railcar loading station, railcar unloading station, grain dryer, and all grain handling operations.
- However, meal does not meet the definition of "grain" in 40 CFR 60.301(a). Therefore, this NSPS does not apply to the meal handling operation P9.
- (b) There are no New Source Performance Standards (NSPS)(326 IAC 12 and 40 CFR Part 60) applicable to this proposed modification.

National Emission Standards for Hazardous Air Pollutants (NESHAP):

- (c) There are no National Emission Standards for Hazardous Air Pollutants (NESHAP) (326 IAC 14, 326 IAC 20 and 40 CFR Part 63) applicable to this proposed modification.

Compliance Assurance Monitoring (CAM):

- (d) Pursuant to 40 CFR 64.2, Compliance Assurance Monitoring (CAM) is applicable to each new or modified emission units that meets the following criteria:
- (1) has a potential to emit before controls equal to or greater than the Part 70 major source threshold for the pollutant involved;
 - (2) is subject to an emission limitation or standard for that pollutant; and
 - (3) uses a control device, as defined in 40 CFR 64.1, to comply with that emission limitation or standard.

The following table is used to identify the applicability of each of the criteria, under 40 CFR 64.1, to each new or modified emission unit involved:

CAM Applicability Analysis							
Emission Unit	Control Device Used	Emission Limitation (Y/N)	Uncontrolled PTE (ton/yr)	Controlled PTE (ton/yr)	Part 70 Major Source Threshold (ton/yr)	CAM Applicable (Y/N)	Large Unit (Y/N)
P9 (particulate matter)	Baghouse	Y	292.83	2.93	100	Y	N

Based on this evaluation, the requirements of 40 CFR Part 64, CAM continue to apply to P9 for particulate matter. A CAM plan was originally submitted and has previously been incorporated as part of the Part 70 Operating Permit Renewal No. T129-31079-00035, issued January 25, 2013.

State Rule Applicability Determination

326 IAC 2-2 (PSD)

PSD applicability is discussed under the Permit Level Determination – PSD section.

326 IAC 2-4.1 (Major Sources of Hazardous Air Pollutants (HAP))

The operation of the meal handling operation P9 will emit less than ten (10) tons per year for a single HAP and less than twenty-five (25) tons per year for a combination of HAPs. Therefore, 326 IAC 2-4.1 does not apply.

326 IAC 2-7-6(5) (Annual Compliance Certification)

The U.S. EPA Federal Register 79 FR 54978 notice does not exempt Title V Permittees from the requirements of 40 CFR 70.6(c)(5)(iv) or 326 IAC 2-7-6(5)(D), but the submittal of the Title V annual compliance certification to IDEM satisfies the requirement to submit the Title V annual compliance certifications to EPA. IDEM does not intend to revise any permits since the requirements of 40 CFR 70.6(c)(5)(iv) or 326 IAC 2-7-6(5)(D) still apply, but Permittees can note on their Title V annual compliance certification that submission to IDEM has satisfied reporting to EPA per Federal Register 79 FR 54978. This only applies to Title V Permittees and Title V compliance certifications.

326 IAC 6-3-2 (Particulate Emission Limitations for Manufacturing Processes)

Pursuant to 326 IAC 6-3-2, the particulate matter (PM) from the meal handling process P9 shall not exceed 50.3 pounds per hour when operating at a process weight rate of 90.7 tons per hour. The pound per hour limitation was calculated with the following equation:

Interpolation and extrapolation of the data for the process weight rate in excess of sixty thousand (60,000) pounds per hour shall be accomplished by use of the equation:

$$E = 55.0 P^{0.11} - 40 \quad \text{where } E = \text{rate of emission in pounds per hour; and} \\ P = \text{process weight rate in tons per hour}$$

The baghouse C9 shall be in operation at all times P9 is in operation, in order to comply with this limit.

Compliance Determination and Monitoring Requirements

Permits issued under 326 IAC 2-7 are required to ensure that sources can demonstrate compliance with all applicable state and federal rules on a continuous basis. All state and federal rules contain compliance provisions; however, these provisions do not always fulfill the requirement for a continuous demonstration. When this occurs, IDEM, OAQ, in conjunction with the source, must develop specific conditions to satisfy 326 IAC 2-7-5. As a result, Compliance Determination Requirements are included in the permit. The Compliance Determination Requirements in Section D of the permit are those conditions that are found directly within state and federal rules and the violation of which serves as grounds for enforcement action.

If the Compliance Determination Requirements are not sufficient to demonstrate continuous compliance, they will be supplemented with Compliance Monitoring Requirements, also in Section D of the permit. Unlike Compliance Determination Requirements, failure to meet Compliance Monitoring conditions would serve as a trigger for corrective actions and not grounds for enforcement action. However, a violation in relation to a compliance monitoring condition will arise through a source's failure to take the appropriate corrective actions within a specific time period.

There are no new Compliance Determination Requirements applicable to the source as a result of this proposed modification.

There are no new Compliance Monitoring Requirements applicable to the source as a result of this proposed modification.

The existing compliance determination and compliance monitoring requirements will not change as a result of this proposed modification. The source shall continue to comply with the applicable requirements and permit conditions as contained in Part 70 Operating Permit Renewal No: T129-31079-00035, issued on January 25, 2013. Permit Conditions D.4.5, D.4.7, D.4.8, and D.4.9 contain the compliance determination and compliance monitoring requirements which apply to the meal handling process P9 and baghouse C9.

Proposed Changes

The changes listed below have been made to Part 70 Operating Permit Renewal No. T129-31079-00035 issued on January 25, 2013. Deleted language appears as ~~strikethroughs~~ and new language appears in **bold**:

- (a) Section A.1 has been revised to clarify the Source Status.
- (b) Sections A.2 and D.4 have been revised to incorporate the proposed emissions units.
- (c) The emissions unit descriptions in Sections D.1 through D.5, and E.1 through E.6 have been revised for clarification purposes.
- (d) Conditions D.1.4 - Particulate Control, D.2.3 - Particulate Control, D.3.5 - Particulate Control, D.3.6 - VOC Control, and D.4.5 - Particulate Control have been revised for clarification purposes.
- (e) The PSD Minor emission limitation for the meal handling operation P9 included in Condition D.4.1 - PSD Minor Limits [326 IAC 2-2] has been revised.

- (f) Condition D.4.6 - Testing Requirements has been revised to include testing requirements for the replacement baghouse C9 controlling the modified operation P9.
- (g) Conditions E.1.1, E.2.1, E.3.1, E.4.1, E.5.1 and E.6.1 for NSPS and NESHAP requirements have been revised for clarification purposes.

...
A.1 General Information [326 IAC 2-7-4(c)] [326 IAC 2-7-5(14)] [326 IAC 2-7-1(22)]

The Permittee owns and operates a stationary soybean oil extraction plant.

Source Address:	2781 Bluff Road, Mt. Vernon, Indiana 47620
General Source Phone Number:	(812) 833-3256
SIC Code:	2075
County Location:	Posey
Source Location Status:	Attainment for all criteria pollutants
Source Status:	Part 70 Operating Permit Program Minor Source, under PSD Greenhouse Gas (GHG) potential to emit (PTE) is less than one hundred thousand (100,000) tons of CO₂-equivalent emissions (CO₂e) per year Major Source, under Section 112 of the Clean Air Act Not in 1 of 28 Source Categories

A.2 Emission Units and Pollution Control Equipment Summary [326 IAC 2-7-4(c)(3)]
[326 IAC 2-7-5(14)]

This stationary source consists of the following emission units and pollution control devices:

- ...
- (z) One (1) meal handling process, identified as P9, approved in 1996 for construction **and approved in 2016 for modification**, with a nominal capacity of 90.7 tons of meal per hour, controlled by baghouse C9, and exhausting to Stack 9. This process consists of the following:
 -
 - (4) One (1) meal screener.
 - (5) ~~Two (2)~~ **Three (3)** meal grinders.
 - (6) ~~Two (2)~~ **Three (3)** meal grinding hoppers.
 -

SECTION D.1 FACILITY **EMISSIONS UNIT** OPERATION CONDITIONS - Boilers

Facility Emissions Unit: Description [326 IAC 2-7-5(14)]
--

....

Compliance Determination Requirements [326 IAC 2-7-6(1)] [326 IAC 2-7-5(1)]

D.1.4 Particulate Control

In order to ~~ensure~~ **assure** compliance with Condition D.1.2, the ESP for particulate control shall be in operation and control emissions from boilers P17B and P17C at all times that these boilers are in operation.

...

SECTION D.2 ~~FACILITY~~ **EMISSIONS UNIT** OPERATION CONDITIONS - Grain Receiving and Handling

Facility **Emissions Unit** Description [~~326 IAC 2-7-5(14)~~]:

...

...

Compliance Determination Requirements [~~326 IAC 2-7-6(1)~~] [326 IAC 2-7-5(1)]

D.2.3 Particulate Control

- (a) In order to **assure ensure** compliance with Condition D.2.1, each of the following emission units shall be controlled by the associated baghouse, as listed in the table below, when these units are in operation:
- ...
- (b) In order to **assure ensure** compliance with Conditions D.2.1(a) and D.2.1(d), dust control oil shall be applied on all soybeans handled by emission units identified as P1, P2, P2A, P2B, and P4.
- (c) In order to **assure ensure** compliance with Conditions D.2.1(a) and D.2.1(d), vehicles unloading grain (Units P1 and P2) shall be restricted to grain to hopper-bottom rail cars or trucks with choke unloading applications.
- ...

SECTION D.3 ~~FACILITY~~ **EMISSIONS UNIT** OPERATION CONDITIONS - Oil Extraction Processes

Facility **Emissions Unit** Description [~~326 IAC 2-7-5(14)~~]:

....

(The information describing the process contained in this facility description box is descriptive information and does not constitute enforceable conditions.)

...

Compliance Determination Requirements [~~326 IAC 2-7-6(1)~~] [326 IAC 2-7-5(1)]

D.3.5 Particulate Control

- (a) In order to **assure ensure** compliance with Conditions D.3.1 and D.3.2, each of the following emission units shall be controlled by the associated baghouse or cyclone, as listed in the table below, when these units are in operation:
- ...

D.3.6 VOC Control

In order to **assure ensure** compliance with Condition D.3.3(a), the soybean oil extraction system (P13) shall be controlled by the mineral oil absorber system (C13) when this system is in operation.

...

SECTION D.4 ~~FACILITY~~ **EMISSIONS UNIT** OPERATION CONDITIONS - Kaolin, Hull, and Meal Handling Operations

Facility **Emissions Unit** Description [~~326 IAC 2-7-5(14)~~]:

....

- (z) One (1) meal handling process, identified as P9, approved in 1996 for construction, **and approved in 2016 for modification**, with a nominal capacity of 90.7 tons of meal per hour, controlled by baghouse C9, and exhausting to Stack 9. This process consists of the following:

<p>Facility Emissions Unit Description [326 IAC 2-7-5(14)]:</p> <p>....</p> <p>(5) Two (2) Three (3) meal grinders.</p> <p>(6) Two (2) Three (3) meal grinding hoppers.</p> <p>....</p>
--

D.4.1 PSD Minor Limits [~~326 IAC 2-2~~]

In order to render the requirements of 326 IAC 2-2 (PSD) not applicable, the PM, PM₁₀, and PM_{2.5} emissions from the following emission units shall be limited as follows:

Unit ID	Unit Description	Control Device	PM Emission Limit (lbs/hr)	PM ₁₀ Emission Limit (lbs/hr)	PM _{2.5} Emission Limit (lbs/hr)
...
P9	Meal Handling	Baghouse C9	0.26 0.67	0.26 0.67	0.26 0.67
...

Compliance with these limits, in combination with the limits in Conditions D.1.2, D.2.1, and D.3.1 and the potential to emit from other units at the source, shall limit the potential to emit PM, PM₁₀, and PM_{2.5} from the entire source to less than 250 tons per twelve (12) consecutive month period, each. Therefore, the requirements of 326 IAC 2-2 (PSD) are not applicable.

Compliance Determination Requirements [~~326 IAC 2-7-6(1)~~] [~~326 IAC 2-7-5(1)~~]

D.4.5 Particulate Control

(a) In order to ~~ensure~~ **assure** compliance with Conditions D.4.1, D.4.2, and D.4.3, each of the following emission units shall be controlled by the associated baghouse or cyclone, as listed in the table below, when these units are in operation:

D.4.6 Testing Requirements [~~326 IAC 2-7-6(1), (6)~~] [~~326 IAC 2-1.1-11~~]

(a) In order to demonstrate ~~the compliance status~~ with Conditions D.4.1 and D.4.3, the Permittee shall perform PM, PM₁₀, and PM_{2.5} testing for the rail and barge bulk weigh system baghouse, no later than sixty (60) days after achieving the maximum capacity with the new baghouse, but not later than one hundred eighty (180) days after initial startup of the new baghouse, utilizing methods as approved by the Commissioner at least once every five (5) years from the date of the most recent valid compliance demonstration. ~~Testing shall be conducted in accordance with the provisions of 326 IAC 3-6 (Source Sampling Procedures). Section C – Performance Testing contains the Permittee's obligation with regard to the performance testing required by this condition. PM₁₀ includes filterable and condensable PM.~~

(b) In order to demonstrate compliance with Conditions D.4.1 and D.4.3, the Permittee shall perform PM, PM₁₀, and PM_{2.5} testing on the exhaust stack (Stack 9) of the replacement meal handling baghouse (C9), no later than sixty (60) days after achieving the maximum capacity of the new meal grinder, but not later than one hundred eighty (180) days after initial startup of the new meal grinder, utilizing methods as approved by the Commissioner. The test shall be repeated at least once every five (5) years from the date of the most recent valid compliance demonstration.

Testing shall be conducted in accordance with the provisions of 326 IAC 3-6 (Source Sampling Procedures). Section C – Performance Testing contains the Permittee's obligation with regard to the performance testing required by this condition. PM₁₀ and PM_{2.5} include filterable and condensable PM.

SECTION D.5 **EMISSIONS UNIT FACILITY OPERATION CONDITIONS**

Facility **Emissions Unit** Description [~~326 IAC 2-7-5(14)~~] - Insignificant Activities

...

SECTION E.1 **NSPS and NESHAP** ~~Standards of Performance for Small Industrial-Commercial-Institutional Steam Generating Units [40 CFR 60, Subpart Dc]~~ [326 IAC 12]

Facility **Emissions Unit** Description: [~~326 IAC 2-7-5(14)~~]

...

New Source Performance Standards (NSPS) **Requirements [326 IAC 2-7-5(1)]**

E.1.1 General Provisions Relating to **New Source Performance Standards NSPS-De** [326 IAC 12-1] [40 CFR 60, Subpart A]

- (a) Pursuant to 40 CFR 60.1, the Permittee shall comply with the provisions of 40 CFR Part 60 Subpart A – General Provisions, which are incorporated by reference as 326 IAC 12-1 for the facilities described in Section E.1 except as otherwise specified in 40 CFR Part 60, Subpart Dc.
- (b) **Pursuant to 40 CFR 60.10, the Permittee shall submit all required notifications and reports to:**

**Indiana Department of Environmental Management
Compliance Branch, Office of Air Quality
100 North Senate Avenue,
MC 61-53 IGCN 1003
Indianapolis, Indiana 46204**

E.1.2 Standards of Performance for Small Industrial-Commercial-Institutional Steam Generating Units [40 CFR 60, Subpart Dc] [326 IAC 12]

~~Pursuant to 40 CFR 60, Subpart Dc, the~~ **The** Permittee shall comply with the **following** provisions of ~~Standards of Performance for Small Industrial-Commercial-Institutional Steam Generating Units, 40 CFR 60, Subpart Dc~~ (**included as Attachment A to this permit**) which are incorporated by reference as 326 IAC 12, (~~included as Attachment A of this permit~~) as specified as follows:

...

SECTION E.2 **NSPS and NESHAP** ~~Standards of Performance for Grain Elevators [40 CFR 60, Subpart DD]~~ [326 IAC 12]

Facility **Emissions Unit** Description: [~~326 IAC 2-7-5(14)~~]

...

New Source Performance Standards (NSPS) **Requirements [326 IAC 2-7-5(1)]**

E.2.1 General Provisions Relating to **New Source Performance Standards NSPS-DD** [326 IAC 12-1] [40 CFR 60, Subpart A]

- (a) Pursuant to 40 CFR 60.1, the Permittee shall comply with the provisions of 40 CFR Part 60 Subpart A – General Provisions, which are incorporated by reference as 326 IAC 12-1 for the facilities described in Section E.2 except as otherwise specified in 40 CFR Part 60, Subpart DD.
- (b) **Pursuant to 40 CFR 60.10, the Permittee shall submit all required notifications and reports to:**

Indiana Department of Environmental Management

**Compliance Branch, Office of Air Quality
100 North Senate Avenue,
MC 61-53 IGCN 1003
Indianapolis, Indiana 46204**

E.2.2 Standards of Performance for Grain Elevators [40 CFR 60, Subpart DD] [326 IAC 12]

Pursuant to 40 CFR 60, Subpart DD, the ~~The~~ Permittee shall comply with the **following** provisions of **40 CFR 60, Subpart DD Standards of Performance for Grain Elevators (included as Attachment B to this permit)**, which are incorporated by reference as 326 IAC 12, ~~(included as Attachment B of this permit)~~ as specified as follows:

...

SECTION E.3 NSPS and NESHAP National Emission Standards for Hazardous Air Pollutants: Solvent Extraction for Vegetable Oil Production [40 CFR Part 63, Subpart GGGG] [326 IAC 20-60]

Facility Emissions Unit Description: [326 IAC 2-7-5(14)]

...

National Emission Standards for Hazardous Air Pollutants (NESHAP) Requirements [326 IAC 2-7-5(1)]

E.3.1 General Provisions Relating to National Emission Standards for Hazardous Air Pollutants under 40 CFR Part 63 NESHAP GGGG [326 IAC 20-1] [40 CFR Part 63, Subpart A]

(a) Pursuant to 40 CFR ~~63.1~~ ~~63.2870~~, the Permittee shall comply with the provisions of 40 CFR Part 63, Subpart A – General Provisions, which are incorporated by reference as 326 IAC 20-1-1, as specified in ~~40 CFR Part 63, Subpart GGGG~~ in accordance with schedule in **for the emission units listed above, except as otherwise specified in 40 CFR 63 Subpart GGGG.**

(b) Pursuant to 40 CFR 63.10, the Permittee shall submit all required notifications and reports to:

**Indiana Department of Environmental Management
Compliance and Enforcement Branch, Office of Air Quality
100 North Senate Avenue
MC 61-53 IGCN 1003
Indianapolis, Indiana 46204-2251**

E.3.2 National Emission Standards for Hazardous Air Pollutants: Solvent Extraction for Vegetable Oil Production [40 CFR Part 63, Subpart GGGG] [326 IAC 20-60]

The Permittee ~~which engages in production of vegetable oil~~ shall comply with the following provisions of 40 CFR 63, Subpart GGGG (included as Attachment C of ~~to~~ this permit), **for the emission units listed above** as specified as follows:

...

SECTION E.4 NSPS and NESHAP National Emission Standards for Hazardous Air Pollutants: Stationary Reciprocating Internal Combustion Engines [40 CFR Part 63, Subpart ZZZZ] [326 IAC 20-82]

Facility Emissions Unit Description: [326 IAC 2-7-5(14)]: Reciprocating Internal Combustion Engines

...

National Emission Standards for Hazardous Air Pollutants (NESHAP) Requirements [326 IAC 2-7-5(1)]

E.4.1 General Provisions Relating to National Emission Standards for Hazardous Air Pollutants under 40 CFR Part 63 NESHAP ZZZZ [326 IAC 20-1] [40 CFR Part 63, Subpart A]

(a) Pursuant to 40 CFR ~~63.1~~ ~~63.6665~~, the Permittee shall comply with the provisions of 40 CFR Part 63, Subpart A – General Provisions, which are incorporated by reference as 326 IAC 20-1-1, **for the emission units listed above, except at otherwise specified in as specified in Table 8 of 40 CFR 63, Subpart ZZZZ** in accordance with the ~~Schedule in~~

40 CFR Part 63, Subpart ZZZZ.

- (b) Pursuant to 40 CFR 63.10, the Permittee shall submit all required notifications and reports to:

**Indiana Department of Environmental Management
Compliance and Enforcement Branch, Office of Air Quality
100 North Senate Avenue
MC 61-53 IGCN 1003
Indianapolis, Indiana 46204-2251**

E.4.2 National Emission Standards for Hazardous Air Pollutants: Stationary Reciprocating Internal Combustion Engines [40 CFR Part 63, Subpart ZZZZ] [326 IAC 20-82]

The Permittee ~~which engages in the use of a reciprocating internal combustion engine~~ shall comply with the following provisions of 40 CFR Part 63, Subpart ZZZZ (included as Attachment D of to this permit) **which are incorporated by reference as 326 IAC 20-82, for the emission units as follows:**

SECTION E.5 ~~NESHAP~~ **NESHAP** National Emission Standards for Hazardous Air Pollutants for Industrial, Commercial, and Institutional Boilers and Process Heaters

Facility Emissions Unit Description [~~326 IAC 2-7-5(14)~~]:

- (a) Three (3) 33.7 MMBtu per hour natural gas fired boilers, identified as P17, P18, and P18A, approved in 1996 for construction, and exhausting to Stacks 17, 18, and 18A, respectively. Under NESHAP, Subpart DDDDD, boilers P17, P18, and P18A are considered part of the existing, affected source.
- (b) Two (2) wood/shredded tire fired boilers, identified as P17B and P17C, approved in 2006 for construction, each with a nominal heat input capacity of 57.3 MMBtu/hr, both controlled by one (1) electrostatic precipitator (ESP) (identified as ES1), and exhausting through Stack 17A. Stack 17A is equipped with a continuous opacity monitoring system (COMS). Under NESHAP, Subpart DDDDD, boilers P17B and P17C are considered part of the existing, affected source.

(The information describing the process contained in this facility description box is descriptive information and does not constitute enforceable conditions.)

E.5.1 General Provisions Relating to **National Emission Standards for Hazardous Air Pollutants under 40 CFR Part 63 NESHAP DDDDD** [326 IAC 20-1] [40 CFR Part 63, Subpart A]

- (a) Pursuant to 40 CFR ~~63.1~~ ~~63.7565~~, the Permittee shall comply with the provisions of 40 CFR Part 63, Subpart A – General Provisions, which are incorporated by reference as 326 IAC 20-1-1 for the **emission units listed above** ~~wood/shredded tire fired boilers (P17B and P17C) as specified in Table 10 of 40 CFR Part 63, Subpart DDDDD in accordance with schedule except as otherwise specified in 40 CFR 63, Subpart DDDDD.~~

- (b) Pursuant to 40 CFR 63.10, the Permittee shall submit all required notifications and reports to:

**Indiana Department of Environmental Management
Compliance and Enforcement Branch, Office of Air Quality
100 North Senate Avenue
MC 61-53 IGCN 1003
Indianapolis, Indiana 46204-2251**

E.5.2 National Emission Standards for Hazardous Air Pollutants for Industrial, Commercial, and Institutional Boilers and Process Heaters [40 CFR 63, Subpart DDDDD] [326 IAC 20-95]

~~Pursuant to 40 CFR 63.7495, the~~ **The** Permittee shall comply with the following provisions of 40 CFR Part 63, Subpart DDDDD (~~National Emission Standards for Hazardous Air Pollutants for Industrial, Commercial, and Institutional Boilers and Process Heaters~~) (included as Attachment E to this permit), which are incorporated by reference as 326 IAC 20-95, **for the emission units as follows:**

...

~~SECTION E.6 NSPS and NESHAP Standards of Performance for Stationary Compression Ignition Internal Combustion Engines [40 CFR 60, Subpart IIII] [326 IAC 12]~~

Facility **Emissions Unit** Description: [326 IAC 2-7-5(14)]

...

New Source Performance Standards (NSPS) **Requirements [326 IAC 2-7-5(1)]**

E.6.1 General Provisions Relating to ~~NSPS IIII~~ **New Source Performance Standards** [326 IAC 12-1] [40 CFR 60, Subpart A]

(a) Pursuant to 40 CFR 60.1, the Permittee shall comply with the provisions of 40 CFR Part 60 Subpart A – General Provisions, which are incorporated by reference as 326 IAC 12-1 for **the emission units listed above**, ~~the facilities described in Section E.6 except as otherwise specified in Table 8 to 40 CFR Part 60, Subpart IIII.~~

(b) **Pursuant to 40 CFR 60.10, the Permittee shall submit all required notifications and reports to:**

**Indiana Department of Environmental Management
Compliance Branch, Office of Air Quality
100 North Senate Avenue,
MC 61-53 IGCN 1003
Indianapolis, Indiana 46204**

E.6.2 Standards of Performance for Stationary Compression Ignition Internal Combustion Engines [40 CFR 60, Subpart IIII] [326 IAC 12]

~~Pursuant to 40 CFR 60, Subpart IIII, the~~ **The** Permittee shall comply with the **following** provisions of **40 CFR 60, Subpart IIII Standards of Performance for Stationary Compression Ignition Internal Combustion Engines**, which are incorporated by reference as 326 IAC 12, **(included as Attachment F to this permit) which are incorporated by reference as 326 IAC 12, as specified as follows:**

...

Conclusion and Recommendation

The construction of this proposed modification shall be subject to the conditions of the attached proposed Part 70 Significant Source Modification No. 129-36267-00035 Significant Permit Modification No. 129-36269-00035. The staff recommends to the Commissioner that this Part 70 Significant Source and Significant Permit Modification be approved.

IDEM Contact

(a) Questions regarding this proposed permit can be directed to Madhurima Moulik at the Indiana Department Environmental Management, Office of Air Quality, Permits Branch, 100 North Senate Avenue, MC 61-53 IGCN 1003, Indianapolis, Indiana 46204-2251 or by telephone at (317) 233-0868 or toll free at 1-800-451-6027 extension 3-0868.

- (b) A copy of the findings is available on the Internet at: <http://www.in.gov/ai/appfiles/idem-caats/>
- (c) For additional information about air permits and how the public and interested parties can participate, refer to the IDEM Permit Guide on the Internet at: <http://www.in.gov/idem/5881.htm>; and the Citizens' Guide to IDEM on the Internet at: <http://www.in.gov/idem/6900.htm>.

TSD Appendix A
New Meal Grinder at P9 (Uncontrolled Emissions)

Company Name: Consolidated Grain and Barge Co.
Address City IN Zip: 2781 Bluff Road, Mt. Vernon, Indiana 47620
SSM/SPM No. : 129-36267-00035/129-36269-00035
Plt ID: 129-00035
Reviewer: Madhurima D. Moulik
Date: 12/11/2015

Particulate (PM, PM₁₀, & PM_{2.5}) from the Meal Grinder

Unit ID	Process	Emission Unit	PM Emission Factor <i>lb/ton</i>	PM10 Emission Factor <i>lb/ton</i>	PM2.5 Emission Factor <i>lb/ton</i>	Grinder Capacity <i>ton/hour</i>	PTE of PM Uncontrolled		PTE of PM ₁₀ Uncontrolled		PTE of PM _{2.5} Uncontrolled	
							<i>lb/hr</i>	<i>ton/yr</i>	<i>lb/hr</i>	<i>ton/yr</i>	<i>lb/hr</i>	<i>ton/yr</i>
P9	Meal Handling	New Meal Grinder	0.34	0.34	0.34	42	14.28	62.55	14.28	62.55	14.28	62.55

Methodology

Potential to Emit Uncontrolled (lb/hr) = Emission Factor (lb/ton) x Grinder Capacity (ton/hour)

Potential to Emit Uncontrolled (ton/yr) = Potential to Emit Uncontrolled (lb/hr) x 8760 hr/yr / 2000 lb/ton

Grinder Capacity = Grinder Horsepower x Soybean Meal Constant x Screen Size/2000 = 150 x 35 x16/2000 = 42 ton/hour

Calculated Grinder Capacity of 42 ton/hour is conservatively high

Emission Factor Source

Meal Grinder/Sizing, AP 42 Table 9.11.1-1 (SCC 3-02-007-93)

*HAPs are limited by the BACT limit for Hexane. For calculating HAPs, only the n-Hexane portion is considered a HAP. Therefore, an industry standard factor (from 40 CFR 63, Subpart GGGG) is used to determine a ratio of n-Hexane to Hexane.

Natural Gas Fired Boilers
 P17, P18, & P18A
 Boilers <100 MMBtu/hr

Emission Unit	Heat Input Capacity	Potential Throughput	Installation Date
NG Boiler P17	33.70 MMBtu/hr	289.42 MMCF/yr	1996
NG Boiler P18	33.70 MMBtu/hr	289.42 MMCF/yr	1996
NG Boiler P18A	33.70 MMBtu/hr	289.42 MMCF/yr	1996
Maximum Capacity:	101.10 MMBtu/hr	868 MMCF/yr	

	Potential To Emit - Regulated Pollutants						
	CO	NO _x	PM	PM ₁₀	PM _{2.5}	SO ₂	VOC

The five highest organic and metal HAPs emission factors are provided above.
 Additional HAPs emission factors are available in AP-42, Chapter 1.4.

Methodology

All emission factors are based on normal firing.

MMBtu = 1,000,000 Btu

MMCF = 1,000,000 Cubic Feet of Gas

Potential Throughput (MMCF) = Heat Input Capacity (MMBtu/hr) x 8,760 hrs/yr x 1 MMCF/1,020 MMBtu

Emission (tons/yr) = Throughput (MMCF/yr) x Emission Factor (lb/MMCF)/2,000 lb/ton

**Wood/Tires Boilers
Combustion of 80% Dry Wood and 20% Shredded Tires
P17B & P17C
Boilers <100 MMBtu/hr**

Emission Unit	Heat Input Capacity	Installation Date
wood/shredded tire Boiler P17B	57.30 MMBtu/hr	2006
wood/shredded tire Boiler P17C	57.30 MMBtu/hr	2006
Maximum Capacity:	114.6 MMBtu/hr	1,003,896 MMBtu/yr

Fuel Equivalency Evaluation

Source: SSM: 129-22782-00035, issued 10/20/2006

Usage Limits		Heating Value
wood	51,875 tons dry wood/yr @ 0% Moisture	16 MMBtu/ton wood
tires	7,410 tons tires/yr	32 MMBtu/ton tires
2.0 tons dry wood / ton tires =		32 MMBtu/ton tires
		16 MMBtu/ton wood

	Potential To Emit - Regulated Pollutants

Uncontrolled Potential To Emit (ton/yr)	100.39	220.86	150.64	253.08	210.90	57.72	8.53
2.) Controlled & Limited Potential To Emit (ton/yr)	83.00	182.60	10.38	17.43	14.53	47.73	7.06

Notes:

PM emission factor is filterable PM only. PM₁₀ emission factor is filterable and condensable PM₁₀ combined. PM_{2.5} emission factor is filterable and condensable PM_{2.5} combined.
The emission factors for SO₂ and NO_x were provided by the source which were estimated using the stack test results from similar sources. Using 20% tire is the worst case scenario for SO₂ emissions. Using 100% wood is the worst case scenario for NO_x emissions. The Permittee is required to perform stack tests to demonstrate compliance with these emission factors.
The emission factors for condensable PM₁₀, CO, and VOC are from AP-42, Tables 1.6-2 and 1.6-3 (09/03) for dry wood combustion (09/03).
All emission factors are based on normal firing. MMBtu = 1,000,000 Btu MMCF = 1,000,000 Cubic Feet of Gas

Methodology

Potential Throughput (pallets/yr) = Heat Input Capacity (MMBtu/yr) / [0.0052 MMBtu/lb pallets x 65 lb/pallet]
1.) Current Permitted Potential to Emit (ton/yr) = Current Permitted Emission Rate (lb/MMBtu) x Dry Wood Equivalent Limit (51,875 tons/yr) x Wood Heating Value (16 MMBtu/ton) / 2000 lb/ton
2.) Controlled & Limited Potential to Emit (ton/yr) = New Permitted Emission Rate (lb/MMBtu) x Dry Wood Equivalent Limit (51,875 tons/yr) x Wood Heating Value (16 MMBtu/ton) / 2000 lb/ton
Emission (lb/hr) = Heat Input Capacity (MMBtu/hr) x Emission Factor (lb/MMBtu)
Emission (tons/yr) = Emission (lb/hr) x 8760 hr/yr / 2000 lb/ton

Notes:

HAP Emission factors for dry wood combustion are from AP-42, Table 1.6-3 for Wood Residue Combustion (09/03). HAP emissions for combustion of painted pallets is derived from testing that was conducted by the source (see below). The HAP emission factors for tire combustion are unknown.

Methodology

Controlled Potential Emissions (lb/hr) = [(0.8 x Wood Emission Factor (lb/MMBtu) x Wood Heat Input Capacity (MMBtu/ton) x Limited Dry Wood Equivalent Usage (ton/yr)) / 8760 hr/yr] + [(0.2 x Tires Emission Factor (lb/ton) x Limited Tire Usage (ton/yr)) / 8760 hr/yr] x (1 - CE (%))
 Controlled Potential Emissions (ton/yr) = [(0.8 x Wood Emission Factor (lb/MMBtu) x Wood Heat Input Capacity (MMBtu/ton) x Limited Dry Wood Equivalent Usage (ton/yr)) / 2000 lb/ton] + [(0.2 x Tires Emission Factor (lb/ton) x Limited Tire Usage (ton/yr)) / 2000 lb/ton] x (1 - CE (%))
 Uncontrolled Potential Emissions (lb/hr) = [(0.8 x Wood Emission Factor (lb/MMBtu) x Wood Heat Input Capacity (MMBtu/ton) x Limited Dry Wood Equivalent Usage (ton/yr)) / 8760 hr/yr] + [(0.2 x Tires Emission Factor (lb/ton) x Limited Tire Usage (ton/yr)) / 8760 hr/yr]
 Uncontrolled Potential Emissions (ton/yr) = [(0.8 x Wood Emission Factor (lb/MMBtu) x Wood Heat Input Capacity (MMBtu/ton) x Limited Dry Wood Equivalent Usage (ton/yr)) / 2000 lb/ton] + [(0.2 x Tires Emission Factor (lb/ton) x Limited Tire Usage (ton/yr)) / 2000 lb/ton]
 Limited Potential Emissions (ton/yr) = [(0.8 x Wood Emission Factor (lb/MMBtu) x Wood Heat Input Capacity (MMBtu/ton) x Limited Dry Wood Equivalent Usage (ton/yr)) / 2000 lb/ton] + [(0.2 x Tires Emission Factor (lb/ton) x Limited Tire Usage (ton/yr)) / 2000 lb/ton]

Painted Pallet Combustion

Source: Administrative Amendment No. 129-26154-00038

The following emission calculations assume the worst case that the pallets are entirely and freshly covered by paint. A representative wet sample of the paint used on the pallets was sent by the source for Laboratory testing for metal HAPs. Given that the paint may have been on the pallets for years, there should be no VOC and given the boiler temperatures any VOC would be burned up if there were any trace amounts.

Limited Capacity (Painted Pallets) =	51,875 tons pallets/yr	103,750,000 lb pallets/yr	1,596,154 pallets/yr
Weight of each painted pallet =	65 lb/pallet		1,660 MMBtu/yr
Maximum amount of paint on each pallet =	5 oz paint/pallet		
	0.3125 lb paint/pallet		
Maximum amount of paint Combusted =	249.40 tons paint/yr		

Metals	Detection Level mg/kg	Detection Level fraction of metal in the paint	Potential to Emit		Emission Factor lb/MMBtu
			lb/yr	lb/hr	
Arsenic	1.8	1.80E-06	0.9	1.03E-04	1.79E-06
Barium	1.8	1.80E-06	0.9	1.03E-04	1.79E-06
Cadmium	1.8	1.80E-06	0.9	1.03E-04	1.79E-06
Chromium	1.8	1.80E-06	0.9	1.03E-04	1.79E-06
Lead	1.8	1.80E-06	0.9	1.03E-04	1.79E-06
Selenium	1.8	1.80E-06	0.9	1.03E-04	1.79E-06
Silver	1.8	1.80E-06	0.9	1.03E-04	1.79E-06
Mercury	0.33	3.31E-07	0.2	1.88E-05	3.29E-07

Methodology

Maximum amount of paint Combusted = Amount of Paint on pallet (lb paint/pallet) x Pallet Burning Capacity (pallets/yr) / 2000 lb/ton
 Detection Level (fraction) = Detection Level(mg/kg) / 64.8 mg/grain / 7000 grains/lb / 2.2 lb/kg
 Potential to Emit (lb/yr) = Maximum Amount of Paint Combusted (tons paint/yr) x Detection Level (fraction) x 2000 lbs/ton

Particulate Emission Limitations for Sources of Indirect Heating
 326 IAC 6-2

Emission Unit	Installation Date	Heat Input Capacity <i>MMBtu/hr</i>	Q <i>MMBtu/hr</i>	Pt <i>lb/MMBtu</i>

wood/shredded tire Boiler P17C	2006	57.30	215.70	0.270

[326 IAC 6-2-4]

$$Pt = \frac{1.09}{Q^{0.26}}$$

Where:

Pt = Pounds of particulate matter emitted per million Btu heat input (lb/MMBtu).

Q = Total source maximum operating capacity rating in million Btu per hour (MMBtu/hr).

(e) If any limitation established by this rule is inconsistent with applicable limitations contained in 326 IAC 6.5 and 326 IAC 6.8, then the limitations contained in 326 IAC 6.5 and 326 IAC 6.8 prevail.

(f) If any limitation established by this rule is inconsistent with applicable limitations contained in 326 IAC 12 concerning new source performance standards, then the limitations contained in 326 IAC 12 prevail.

(g) If any limitation established by this rule is inconsistent with a limitation contained in a facility's construction or operation permit as issued pursuant to 326 IAC 2 concerning permit review regulations, then the limitations contained in the source's current permits prevail.

(h) If any limitation established by this rule is inconsistent with a limitation required by 326 IAC 2 concerning permit review regulations, to prevent a violation of the ambient air quality standards set forth in 326 IAC 1-4, then the limitations required by 326 IAC 2 prevail.

Assumptions

All PM emissions equal PM₁₀ and PM_{2.5} emissions.

Methodology

Potential to Emit after Control (lb/hr) = Outlet Grain Loading (gr/dscf) x Max. Air Flow Rate (scfm) x 60 mins/hr x 1/7000 lb/gr
 Potential to Emit after Control (ton/yr) = Potential to Emit after Control (lb/hr) x 8760 hr/yr / 2000 lb/ton
 Potential to Emit before Control (lb/hr) = Potential to Emit after Control (lb/hr) / [1 - Control Efficiency (%)]
 Potential to Emit before Control (ton/yr) = Potential to Emit before Control (lb/hr) x 8760 hr/yr / 2000 lb/ton

Particulate (PM, PM₁₀, & PM_{2.5}) from the Receiving, Handling, and Loadout Operations for Grain, Hull, and Meal

Notes:

Emission factors are from AP-42, Chapter 9.9.1 - Grain Elevators, Table 9.9.1-1 (03/03).

Emission factors for P21 are based on stack testing.

*Controlled PTE for P1 and P2 is calculated without consideration of the Baghouse controlling the aspirated soybean receiving legs.

Methodology

Potential to Emit before Control (lb/hr) = Maximum Throughput Rate (ton/hr) x Uncontrolled Emission Factor (lb/ton)
 Potential to Emit before Control (ton/yr) = Potential to Emit before Control (lb/hr) x 8760 hr/yr / 2000 lb/ton
 Potential to Emit after Control and Limit (lb/hr) = Annual Throughput Limit (ton/yr) / 8760 hr/yr x Uncontrolled Emission Factor (lb/ton) x [1 - Control Efficiency (%)]
 Potential to Emit after Control and Limit (ton/yr) = Annual Throughput Limit (ton/yr) x Uncontrolled Emission Factor (lb/ton) / 2000 lb/ton x [1 - Control Efficiency (%)]

VOC and HAP from the Soybean Oil Extraction System

Unit ID	Process	Maximum Throughput Rate		Annual Throughput Limit	Control Measure	Control Efficiency	VOC/Hexane Emission Factor (Unrestricted)	Hexane Density (VOC)	VOC/Hexane Emission s (Unrestricted)	VOC/Hexane Emission Factor (BACT)	VOC/Hexane Emission s (BACT)	Plant-Wide Hexane Emissions

Total Increase from modification:												478.6	52.3	58.7					
VOC Content:		100%		Hexane Emission Rates:		4.9 lb/ton													
Solvent Used:		Hexane (This is also a HAP)				0.89 gal/ton													

*HAP Fraction (n-Hexane) = 64% wt. %

Notes:

*All the VOC emissions are from Hexane. For calculating HAPs, only the n-Hexane portion is considered a HAP. Therefore, an industry standard factor (from 40 CFR 63, Subpart GGGG) is used to determine a ratio of n-Hexane to Hexane.
 Unrestricted VOC Emission factor is from AP-42, Chapter 9.11 - Vegetable Oil Processing, Section 9.11.1.3 (11/95). (All VOC is Hexane).
 Unrestricted Hexane Emission factor is from AP-42, Chapter 9.11 - Vegetable Oil Processing, Section 9.11.1.3 (11/95).
 BACT Emission rates are from CPM129-7489-00035, issued on July 17, 1995, and SSM No. 129-27572-00035 (Revised BACT), issued on August 11, 2009.
 The VOC/Hexane emissions estimates for the Soybean Oil Extraction System include tank emissions.

Methodology

Potential to Emit VOC (Unrestricted) = Maximum Throughput Rate (ton/hr) x Unrestricted VOC Emission Factor (gal/ton beans) x Density (lb/gal) x 8760 hr/yr / 2000 lb/ton
 Potential to Emit VOC (BACT Limit) = Maximum Process Weight (ton/hr beans) x BACT VOC Emission Factor (lb/ton beans) x 8760 hr/yr / 2000 lb/ton
 Potential to Emit VOC (BACT + Production Limit) = Annual Production Limit (ton/yr beans) x BACT VOC Emission Factor (lb/ton beans) / 2000 lb/ton
 Potential to Emit Hexane (Unrestricted) = Maximum Throughput Rate (ton/hr) x Unrestricted Hexane Emission Factor (gal/ton beans) x Density (lb/gal) x 8760 hr/yr / 2000 lb/ton
 Potential to Emit Hexane (BACT Limit) = Maximum Process Weight (ton/hr beans) x BACT Hexane Emission Factor (gal/ton beans) x Density (lb/gal) x 8760 hr/yr / 2000 lb/ton
 Potential to Emit Hexane (BACT + Production Limit) = Annual Production Limit (ton/yr beans) x BACT Hexane Emission Factor (gal/ton beans) x Density (lb/gal) / 2000 lb/ton

Total Increase from modification:

HAP Fraction (n-Hexane) = 64% wt. %

Notes

All the VOC emissions are from Hexane. For calculating HAPs, only the n-Hexane portion is considered a HAP. Therefore, an industry standard factor (from 40 CFR 63, Subpart GGGG) is used to determine a ratio of n-Hexane to Hexane.
Dryer Section P10, P11, and P12 are operated in series.

Unrestricted VOC Emission factor is from AP-42, Chapter 9.11 - Vegetable Oil Processing, Section 9.11.1.8 (11/95). (All VOC is Hexane.)

Unrestricted Hexane Emission factor is from AP-42, Chapter 9.11 - Vegetable Oil Processing, Section 9.11.1.8 (11/95).

BACT Emission rates are from CP#129-7488-00035, issued on July 17, 1995, and SSM No. 129-27572-00035 (Revised BACT), issued on August 11, 2009.

*Maximum throughput of these units is based on total soybean process rate instead of maximum rate input to dryers since the emission factor is based on weight of soybeans processed. By the time it gets to these emission units, hulls have been separated from the crushed bean and a portion of the oil has been removed.

Methodology

Potential to Emit VOC (Unrestricted) = Maximum Throughput Rate (ton/hr) x Unrestricted VOC Emission Factor (gal/ton beans) x Density (lb/gal) x 8760 hr/yr / 2000 lb/ton

Potential to Emit VOC (BACT Limit) = Maximum Process Weight (ton/hr beans) x BACT VOC Emission Factor (lb/ton beans) x 8760 hr/yr / 2000 lb/ton

Potential to Emit VOC (BACT + Production Limit) = Annual Production Limit (ton/yr beans) x BACT VOC Emission Factor (lb/ton beans) / 2000 lb/ton

Potential to Emit Hexane (Unrestricted) = Maximum Throughput Rate (ton/hr) x Unrestricted Hexane Emission Factor (gal/ton beans) x Density (lb/gal) x 8760 hr/yr / 2000 lb/ton

Potential to Emit Hexane (Production Limit) = Annual Production Limit (ton/yr beans) x Hexane Emission Factor (gal/ton beans) x Density (lb/gal) / 2000 lb/ton

(c) This rule shall not apply if a particulate matter limitation established in:

- (1) 326 IAC 2-2-3, concerning prevention of significant deterioration (PSD) best available control technology (BACT) determinations contained in a permit;
- (2) 326 IAC 2-3-3, concerning lowest achievable emission rate (LAER) determinations contained in a permit;
- (3) 326 IAC 6.5 and 326 IAC 6.8, concerning particulate matter emissions;
- (4) 326 IAC 11, concerning existing emission limitations for specific operations;
- (5) 326 IAC 12, concerning new source performance standards; or
- (6) 326 IAC 20, concerning national emission standards for hazardous air pollutants;

The north truck receiving area (P24), the north house bin loading area (P27), the truck soybean receiving area (P1), the truck and railcar soybean and hull receiving area (P2), the annex silo loading operation (P2A), the soybean storage system (P2B), and the soybean cleaning operation (P4) at this source are the requirements of 40 CFR 60, Subpart DD (NSPS for Grain Elevators). Therefore, these operations are exempt from the requirements of 326 IAC 6-3, pursuant to 326 IAC 6-3-1(c)(5).

Diesel Fired Fire Pumps (Emergency)

Emission Unit	Rating	Heat Input Capacity	Installation Date
emergency generator	305 hp	2.14 MMBtu/hr	2012

Methodology

7,000 Btu = 1 hp-hr

MMBtu = 1,000,000 Btu

Emission factors are from AP-42, Chapter 3.3, Table 3.3-1, SCC #2-02-001-02 and 2-03-001-01 (AP-42 Supplement B, 10/96).

Assume PM = PM₁₀ = PM_{2.5}

Assume TOC (total organic compounds) emissions are equal to VOC emissions.

Potential to Emit (lb/hr) = Rating (hp) x Emission Factor (lb/hp-hr)

Potential to Emit (lb/hr) = Heat Input Capacity (MMBtu/hr) x Emission Factor (lbs/MMBtu)

Potential to Emit (tons/yr) = Potential to Emit (lb/hr) x 500 hr/yr /2000 lb/ton

Natural Gas Fired Emergency Generator
 2 stroke lean burn engine

Emission Unit	Rating		Heat Input Capacity		Installation Date
	emergency generator	343	kW	1.17	MMBtu/hr
Maximum Capacity:	343	kW	1.17	MMBtu/hr	

Operating Hours
 500 hr/yr

	Potential To Emit - Regulated Pollutants

Methodology

MMBtu = 1,000,000 Btu

Emission factors are from AP-42, Chapter 3.2, Table 3.2-1: Uncontrolled Emission Factors for 2-Stroke Lean-Burn Engines (AP-42, 08/00).

Potential to Emit (lb/hr) = Heat Input Capacity (MMBtu/hr) x Emission Factor (lbs/MMBtu)

Potential to Emit (tons/yr) = Potential to Emit (lb/hr) x 500 hr/yr /2000 lb/ton

Fugitive Emissions Unpaved Roads

According to AP42, Chapter 13.2.2 - Unpaved Roads (11/06), the particulate emission factors for unpaved roads can be estimated from the following equation:

$$E = k \times (s/12)^a \times (w/3)^b$$

where:

E = emission factor (lb/vehicle mile traveled)			
s = surface material silt content (%) =	6.4 % (AP-42, Table 13.2.2-1)		
w = mean vehicle weight (tons) =	29.2 tons (see the calculations below)		
k = empirical constant =	4.9 PM	1.5 PM ₁₀	0.15 PM _{2.5}
a = empirical constant =	0.7 PM	0.9 PM ₁₀	0.9 PM _{2.5}
b = empirical constant =	0.45		

Vehicle Type	Average Vehicle Weight <i>tons</i>	Total Trip Number* <i>trips/yr</i>	Round Trip Distance* <i>miles/trip</i>	Vehicle Mile Traveled (VMT) <i>miles/yr</i>	Traffic Component* <i>%</i>	Component Vehicle Weight <i>tons</i>	PM Emission Factor <i>lb/mile</i>	PM ₁₀ Emission Factor <i>lb/mile</i>	PM _{2.5} Emission Factor <i>lb/mile</i>	PM Emissions <i>ton/yr</i>	PM ₁₀ Emissions <i>ton/yr</i>	PM _{2.5} Emissions <i>ton/yr</i>
Wood Truck	28.0	2,313	0.06	139	90.1%	25.2	8.78	2.37	0.24	0.610	0.165	0.016
Tire Truck	40.0	254	0.06	15	9.89%	4.0	8.78	2.37	0.24	0.067	0.018	0.002
Total				154	100%	29.2				0.677	0.183	0.018

* This information is provided by the source.

Methodology

Component Vehicle Weight = Ave. Vehicle Weight (tons) x Traffic Component (%)

VMT (miles/yr) = Round Trip Distance (miles/trip) x Total Trip Numbers (trips/yr)

Potential to Emit (tons/yr) = VMT (miles/yr) x Emission Factors (lb/mile) / 2000 lb/ton

(Note that the summation of the component vehicle weight equals the Mean Vehicle Weight.)

Fugitive Emissions Paved Roads

According to AP42, Chapter 13.2.1 - Paved Roads (11/06), the particulate emission factors for paved roads can be estimated from the following equation:

$$EF = [k (sL)^{0.91} (W)^{1.02}] (1 - (P/4N))$$

where: EF = Emission Factor lbs/VMT

k = Particle Size Multiplier for Paved Road Equation

0.011 PM

0.0022 PM₁₀

0.00054 PM_{2.5}

sL = Road Surface Silt Loading (grams per square meter (g/m²))

2.9 (g/m²) (AP-42, Table 13.2.1-3)

W = average weight (tons) of vehicles traveling the road.

37.0

P = number of days with at least 0.01 in of precipitation during averaging period

120

N = number of days in the averaging period (e.g. 365 for annual)

365

Vehicle Type	Average Vehicle Weight tons	Total Trip Number* trips/yr	Round Trip Distance* miles/trip	Vehicle Mile Traveled (VMT) miles/yr	Traffic Component* %	Component Vehicle Weight tons	PM Emission Factor (non-winter) lb/mile	PM ₁₀ Emission Factor (non-winter) lb/mile	PM _{2.5} Emission Factor (non-winter) lb/mile	PM Emissions ton/yr	PM ₁₀ Emissions ton/yr	PM _{2.5} Emissions ton/yr
Grain Receiving	40.0	35,000	0.28	9,940	74.5%	29.8	1.06	0.21	0.05	5.254	1.051	0.258

Tire Truck	40.0	23	0.74	17	0.2%	0.1	1.06	0.21	0.05	0.009	0.002	0.000
Ash Truck	28.0	46	0.50	23	0.33%	0.1	1.06	0.21	0.05	0.012	0.002	0.001
Total				11,691	100%	37.0				6.180	1.236	0.303

* This information is provided by the source.

Methodology

Component Vehicle Weight = Ave. Vehicle Weight (tons) x Traffic Component (%)

(Note that the summation of the component vehicle weight equals the Mean Vehicle Weight.)

VMT (miles/yr) = Round Trip Distance (miles/trip) x Total Trip Numbers (trips/yr)

Potential to Emit (tons/yr) = VMT (miles/yr) x Emission Factors (lb/mile) / 2000 lb/ton

Fugitive Emissions Grain Storage Piles

$$\begin{aligned} E_f &= 1.7 \times (s/1.5) \times (365-p)/235 \times (f/15) \\ &= 1.89 \text{ lb/acre/day} \end{aligned}$$

where s = 1.6 % silt content of material
p = 120 days of rain greater than or equal to 0.01 inches
f = 15 % of wind greater than or equal to 12 mph

$$\begin{aligned} E_p (\text{storage}) &= E_f \times sc \times (40 \text{ cuft/ton}) / (2000 \text{ lb/ton}) / (43560 \text{ sqft/acre}) / (25 \text{ ft}) \times (365 \text{ day/yr}) \\ &= 0.53 \text{ tons/yr} \end{aligned}$$

where sc = 42 ,000 tons storage capacity

This calculation is from AP-42, Chapter 11.2.3, Fourth edition (5/83).
The calculations were not included in subsequent editions of AP-42.

Degreasing Operations

VOC/HAP Emissions:			VOC Info	
Solvents	Density (lb/gal)	Maximum Usage (gals/yr)	Weight % VOC	VOC Emissions (tons/yr)
mineral spirits (petroleum naptha)	8.2	145	100%	0.59

Notes:

Maximum Usage is based upon the maximum allowable solvent usage for degreasing operations that are considered "insignificant" under 326 IAC 2-7-1(21)(K)(vi)(CC). Acetone is considered an exempt VOC product.

Methodology

VOC/HAP Emissions (tons/yr) = Density (lbs/gal) x Maximum Usage (gals/yr) x Weight % VOC or HAP x 1 ton/2,000 lbs

Hexane Storage Tanks

Number of storage tanks: 1
volume: 8,000 gal

Tanks VOC/HAP Emissions: 1.25 ton/yr

Number of storage tanks: 1
volume: 28,000 gal

Tanks VOC/HAP Emissions: 4.38 ton/yr

2
volume: 14,000 gal

Tanks VOC/HAP Emissions: 2.19 ton/yr each
(TANKS) 4.38 ton/yr total

Total VOC/HAP Emissions: 10.00 ton/yr

However...

The Hexane Emissions from the storage tanks are routed to the stack for the Soybean Oil Extraction System (P13), and the emission factors for this system account for the emissions from these tanks.

Natural Gas Fired Heaters
 Boilers <10 MMBtu/hr

Emission Unit	Heat Input Capacity	Potential Throughput
Welfare Building Heater 1	0.22 MMBtu/hr	1.89 MMCF/yr
Welfare Building Heater 2	0.22 MMBtu/hr	1.89 MMCF/yr
Maximum Capacity:	0.44 MMBtu/hr	3.78 MMCF/yr

	Potential To Emit - Regulated Pollutants

The five highest organic and metal HAPs emission factors are provided above.
 Additional HAPs emission factors are available in AP-42, Chapter 1.4.

Methodology

All emission factors are based on normal firing.

MMBtu = 1,000,000 Btu

MMCF = 1,000,000 Cubic Feet of Gas

Potential Throughput (MMCF) = Heat Input Capacity (MMBtu/hr) x 8,760 hrs/yr x 1 MMCF/1,020 MMBtu

Emission Factors are from AP 42, Chapter 1.4, Tables 1.4-1, 1.4-2, 1.4-3, SCC #1-02-006-02, 1-01-006-02, 1-03-006-02, and 1-03-006-03 (SUPPLEMENT D 3/98)

Emission (tons/yr) = Throughput (MMCF/yr) x Emission Factor (lb/MMCF)/2,000 lb/ton

Potential to Emit (tons/yr) = Potential Throughput (MMCF/yr) x Emission Factor (lbs/MMCF) x 1 ton/2000 lbs

Permit Level: Title V Significant Source
Modification and Significant Permit Modification
Permit Number: 129-36267-00035 and
129-36269-00035

Dear Mr. VanMeter:

Enclosed is a copy of your draft Title V Significant Source Modification and Significant Permit Modification, Technical Support Document, emission calculations, and the Public Notice which will be printed in your local newspaper.

The Office of Air Quality (OAQ) has prepared two versions of the Public Notice Document. The abbreviated version will be published in the newspaper, and the more detailed version will be made available on the IDEM's website and provided to interested parties. Both versions are included for your reference. The OAQ has requested that the Mount Vernon Democrat in Mount Vernon, Indiana publish the abbreviated version of the public notice no later than December 30, 2015. You will not be responsible for collecting any comments, nor are you responsible for having the notice published in the newspaper.

OAQ has submitted the draft permit package to the Alexandrian Public Library, 115 West Fifth Street in Mount Vernon, Indiana. As a reminder, you are obligated by 326 IAC 2-1.1-6(c) to place a copy of the complete permit application at this library no later than ten (10) days after submittal of the application or additional information to our department. We highly recommend that even if you have already placed these materials at the library, that you confirm with the library that these materials are available for review and request that the library keep the materials available for review during the entire permitting process.

Please review the enclosed documents carefully. This is your opportunity to comment on the draft permit and notify the OAQ of any corrections that are needed before the final decision. Questions or comments about the enclosed documents should be directed to Madhurima Moulik, Indiana Department of Environmental Management, Office of Air Quality, 100 N. Senate Avenue, Indianapolis, Indiana, 46204 or call (800) 451-6027, and ask for extension 3-0868 or dial (317) 233-0868.

Sincerely,

Vivian Haun

ATTENTION: PUBLIC NOTICES, LEGAL ADVERTISING

December 23, 2015

Mount Vernon Democrat
PO Box 767
Mount Vernon, IN 47620

Enclosed, please find one Indiana Department of Environmental Management Notice of Public Comment for Consolidated Grain and Barge Co., Posey County, Indiana.

Since our agency must comply with requirements which call for a Notice of Public Comment, we request that you print this notice one time, no later than December 30, 2015.

Please send a notarized form, clippings showing the date of publication, and the billing to the Indiana Department of Environmental Management, Accounting, Room N1345, 100 North Senate Avenue, Indianapolis, Indiana, 46204.

To ensure proper payment, please reference account # 100174737.

We are required by the Auditor's Office to request that you place the Federal ID Number on all claims. If you have any conflicts, questions, or problems with the publishing of this notice or if you do not receive complete public notice information for this notice, please call Vivian Haun at 800-451-6027 and ask for extension 3-6878 or dial 317-233-6878.

Sincerely,

Vivian Haun

To: Alexandrian Public Library

From: Matthew Stuckey, Branch Chief
Permits Branch
Office of Air Quality

Subject: **Important Information to Display Regarding a Public Notice for an Air Permit**

Applicant Name: Consolidated Grain and Barge Co.
Permit Number: 129-36267-00035 and 129-36269-00035

Enclosed is a copy of important information to make available to the public. This proposed project is regarding a source that may have the potential to significantly impact air quality. Librarians are encouraged to educate the public to make them aware of the availability of this information. The following information is enclosed for public reference at your library:

- Notice of a 30-day Period for Public Comment
- Request to publish the Notice of 30-day Period for Public Comment
- Draft Permit and Technical Support Document

You will not be responsible for collecting any comments from the citizens. Please refer all questions and request for the copies of any pertinent information to the person named below.

Members of your community could be very concerned in how these projects might affect them and their families. **Please make this information readily available until you receive a copy of the final package.**

If you have any questions concerning this public review process, please contact Joanne Smiddie-Brush, OAQ Permits Administration Section at 1-800-451-6027, extension 3-0185. Questions pertaining to the permit itself should be directed to the contact listed on the notice.

Notice of Public Comment

December 28, 2015

Consolidated Grain and Barge Co.

129-36267-00035 and 129-36269-00035

Dear Concerned Citizen(s):

You have been identified as someone who could potentially be affected by this proposed air permit. The Indiana Department of Environmental Management, in our ongoing efforts to better communicate with concerned citizens, invites your comment on the draft permit.

Enclosed is a Notice of Public Comment, which has been placed in the Legal Advertising section of your local newspaper. The application and supporting documentation for this proposed permit have been placed at the library indicated in the Notice. These documents more fully describe the project, the applicable air pollution control requirements and how the applicant will comply with these requirements.

If you would like to comment on this draft permit, please contact the person named in the enclosed Public Notice. Thank you for your interest in the Indiana's Air Permitting Program.

Please Note: *If you feel you have received this Notice in error, or would like to be removed from the Air Permits mailing list, please contact Patricia Pear with the Air Permits Administration Section at 1-800-451-6027, ext. 3-6875 or via e-mail at PPEAR@IDEM.IN.GOV. If you have recently moved and this Notice has been forwarded to you, please notify us of your new address and if you wish to remain on the mailing list. Mail that is returned to IDEM by the Post Office with a forwarding address in a different county will be removed from our list unless otherwise requested.*
